```
You are an adversarial verifier in a tech-debt audit. Your default stance: REFUTE. Today is
2026-07-02.
A finder claims the following about the repo at C:/Users/avidu/Projects/khelsutra-
guru/badminton-highlight-indexer:

{
  "title": "Misplaced type-ignore in gcs.py makes the mypy gate environment-dependent: fails
locally with google-cloud installed, green in CI",
  "category": "hygiene",
  "severity": "P2",
  "file": "backend/storage/gcs.py",
  "line": 31,
  "evidence": "Verified locally: 'mypy backend training' (mypy 2.1.0, same unpinned major CI
uses) ? 'backend\\storage\\gcs.py:31: error: Module \"google.cloud\" has no attribute
\"storage\" [attr-defined]; Found 1 error'. The intended suppression sits on line 32 ('storage,
# type: ignore') inside the parenthesized import, but mypy attributes the error to line 31 (the
'from google.cloud import (' line), so it never applies. CI's typecheck lane stays green only
because it never installs google-cloud-storage (ci.yml:79) and mypy.ini:5
ignore_missing_imports=True swallows the unresolved module",
  "why_it_matters": "The 'lenient GREEN baseline' (mypy.ini:1-4) is only green in CI's exact
dependency set. Any contributor box with the storage-gcs extra installed (pyproject.toml:86)
fails the owner's pre-LGTM local mypy gate on untouched code, and adding cloud deps to any CI
lane would silently redden the typecheck job.",
  "proposed_fix": "Collapse the import to one line with the ignore attached ('from google.cloud
import storage  # type: ignore[attr-defined]') or move the comment to the from-line; then a
green run is reproducible regardless of installed optional extras.",
  "effort": "S",
  "tracked_in": ""
}

Repo root candidates: C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer,
C:/Users/avidu/Projects/khelsutra-guru/khelsutra, C:/Users/avidu/Projects/khelsutra-guru/sports-
data-collector, C:/Users/avidu/Projects/khelsutra-guru/rally-annotator,
C:/Users/avidu/Projects/khelsutra-guru/sports-obsreport (pick from the finding's repo field;
non-git dirs: 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup',
C:/Users/avidu/Projects/khelsutra-guru/khelsutra-screencast).
VERIFY against the CURRENT working tree (just pulled to origin master/main): (1) does the cited
code actually exist and behave as claimed at file:line? (2) was it already fixed by a recent
commit (git log --oneline -15 -- <file>)? (3) is the severity honest - construct the concrete
failure scenario or downgrade; (4) is the proposed fix sane and correctly scoped; (5) is it
owner-gated per: alpha/serving go-live, Studio P10/P11 corpus-promotion/training,
product/strategy/licensing, real cloud spend, counsel ToS/DPA?
HARD RULES: READ-ONLY (no file modifications, no installs, no test-suite runs). gh read-only
commands allowed. Your reasoning MUST cite file:line you actually read. CONFIRMED requires you
```

personally saw the defect/debt in current code; if you cannot reproduce the claim from the code, say REFUTED; if a commit fixed it, ALREADY_FIXED.

2. user (2026-07-02T03:00:47.574Z)

```
"""Google Cloud Storage backend ? first-class object buckets.

Uses ``google-cloud-storage``, imported lazily so ``import backend.storage`` never pulls it;
install with the ``storage-gcs`` extra. Credentials come from Application Default Credentials
(``GOOGLE_APPLICATION_CREDENTIALS`` pointing at a service-account JSON, or workload identity) ?
never from config. A ``client`` may be injected for tests.
"""
