Transcript

1. user (2026-05-31T14:27:51.948Z)

Verify the EXACT license of "pysqlite3 (coleifer)" from its AUTHORITATIVE source (github.com/coleifer/pysqlite3 + PyPI: the LICENSE file in the repo and the PyPI/repo metadata). Report: (1) the SPDX license identifier and the license name, (2) the source URL you confirmed it from, (3) a clear flag - is it GPL/LGPL/AGPL (a BLOCKER) or permissive (MIT/BSD/Apache-2.0/ISC/HPND - OK)?, (4) the licenses of any BUNDLED NATIVE dependencies (e.g. OpenSSL, the SQLite amalgamation). Be precise and skeptical; if the license is dual, ambiguous, or differs between the C core and the Python binding, say so explicitly. Do not guess - if you cannot confirm from an authoritative source, say so. Keep it tight.

2. assistant (2026-05-31T14:27:55.162Z)

I'll verify the exact license of pysqlite3 from its authoritative sources. Let me start by checking the GitHub repository and PyPI.

3. user (2026-05-31T14:27:57.530Z)

{"availableTabs":[{"tabId":2039714507,"title":"New Tab","url":"chrome://newtab/"}],"tabGroupId":1405226344}

<system-reminder>You used a single tool call this turn. Prefer browser_batch to execute multiple
actions in one call ? it is significantly faster. Batch your next sequence of clicks, types,
navigations, and screenshots together.</system-reminder>
```

12. assistant (2026-05-31T14:30:12.236Z)

I notice the scroll went to a different page. Let me navigate back to the GitHub LICENSE file directly.

13. user (2026-05-31T14:30:36.733Z)

```
[navigate] Navigated to https://raw.githubusercontent.com/coleifer/pysqlite3/master/LICENSE
[computer:screenshot] Successfully captured screenshot (1568x779, jpeg) - ID: ss_6651ggv7t

Tab Context:
- Executed on tabId: 2039714507
```

- Available tabs:
  ? tabId 2039714507: "raw.githubusercontent.com/coleifer/pysqlite3/master/LICENSE"
(https://raw.githubusercontent.com/coleifer/pysqlite3/master/LICENSE)

14. assistant (2026-05-31T14:30:39.559Z)

Excellent! I can now see the full LICENSE file from the GitHub repo. Now let me check the PyPI page for pysqlite3 to verify the license metadata there as well.

15. user (2026-05-31T14:30:45.270Z)

[navigate] Navigated to https://pypi.org/project/pysqlite3/
[computer:screenshot] Successfully captured screenshot (1568x779, jpeg) - ID: ss_5137dm5ye

Tab Context:
- Executed on tabId: 2039714507
- Available tabs:
  ? tabId 2039714507: "pysqlite3 · PyPI" (https://pypi.org/project/pysqlite3/)

16. assistant (2026-05-31T14:30:48.489Z)

Perfect! I can see the PyPI page for pysqlite3 version 0.6.0. I can see in the "Meta" section that it shows:
- **License Expression: MIT**

However, I also see there's an "spdx" reference. Let me check what's visible more carefully. I can see "License Expression: MIT" with an "spdx" tag. Let me scroll down to see if there's more license information on this page.

17. user (2026-05-31T14:30:50.547Z)

Scrolled down by 3 ticks at (525, 600)

Tab Context:
- Executed on tabId: 2039714507
- Available tabs:
  ? tabId 2039714507: "rogerbinns/apsw: Another Python SQLite wrapper"
(https://github.com/rogerbinns/apsw)
<system-reminder>You used a single tool call this turn. Prefer browser_batch to execute multiple actions in one call ? it is significantly faster. Batch your next sequence of clicks, types, navigations, and screenshots together.</system-reminder>

18. assistant (2026-05-31T14:30:53.293Z)

The page navigated away. Let me go back to the PyPI page for pysqlite3 and check the license information more carefully.

19. user (2026-05-31T14:30:57.364Z)

[navigate] Navigated to https://pypi.org/project/pysqlite3/
[computer:screenshot] Successfully captured screenshot (1568x779, jpeg) - ID: ss_7251nfx6g

Tab Context:
- Executed on tabId: 2039714507
- Available tabs:
  ? tabId 2039714507: "pysqlite3 · PyPI" (https://pypi.org/project/pysqlite3/)

20. assistant (2026-05-31T14:31:01.537Z)

I can see the PyPI page clearly shows:
- **License Expression: MIT** with an "spdx" tag

However, I previously saw from the GitHub LICENSE file that it contains the zlib License (not MIT). This is a discrepancy I need to clarify. Let me check the setup.py or pyproject.toml in the GitHub repo to see what the actual declared license is in the source.

21. user (2026-05-31T14:31:05.375Z)

[navigate] Navigated to https://github.com/coleifer/pysqlite3/blob/master/setup.py
[computer:screenshot] Successfully captured screenshot (1568x779, jpeg) - ID: ss_5239f874o

Tab Context:

- Available tabs:
  ? tabId 2039714507: "raw.githubusercontent.com/coleifer/pysqlite3/master/setup.py"
(https://raw.githubusercontent.com/coleifer/pysqlite3/master/setup.py)
<system-reminder>You used a single tool call this turn. Prefer browser_batch to execute multiple actions in one call ? it is significantly faster. Batch your next sequence of clicks, types, navigations, and screenshots together.</system-reminder>

32. user (2026-05-31T14:32:33.769Z)

Error capturing screenshot: CDP sendCommand "Page.captureScreenshot" timed out after 30000ms on tab 2039714507. The renderer may be frozen or unresponsive.

33. assistant (2026-05-31T14:32:36.308Z)

Let me navigate directly to find the setup() call in the file using a different approach.

34. user (2026-05-31T14:32:38.992Z)

Analysis of setup.py

Looking at the `setup()` function call at the end of the file:

```python
setup(ext_modules=extensions)
```

Finding: The `setup()` function call does **not include a license parameter**. Only the `ext_modules` argument is specified, which passes the extension modules list defined earlier in the script.

The setup configuration is notably minimal, containing just one parameter rather than typical metadata like license, author, version, or other package details that would normally appear in a distutils/setuptools configuration.

35. assistant (2026-05-31T14:32:41.605Z)

Interesting! The setup.py file doesn't declare a license parameter. Let me check if there's a pyproject.toml or setup.cfg file that declares the license.

36. user (2026-05-31T14:32:44.173Z)

License Information Check

The `pyproject.toml` file does **not** contain explicit license information.

There is no `license` field specified in the `[project]` section, which would typically look like:
```
license = { text = "MIT" }
```

or

```
license-files = { paths = ["LICENSE"] }
```

To determine the actual license for pysqlite3, you would need to check the repository's LICENSE file or other documentation outside this configuration file.

37. assistant (2026-05-31T14:32:47.966Z)

Now let me check what the actual LICENSE file contains more carefully. I saw it was the zlib License from my earlier screenshot. Let me also check if there's a setup.cfg file.

38. user (2026-05-31T14:32:48.433Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

39. assistant (2026-05-31T14:32:51.208Z)

OK, so there's no setup.cfg file. Let me review the LICENSE file I saw earlier. The raw LICENSE file showed it was the zlib License. Now let me verify the exact license statement and check for any bundled SQLite dependencies. Let me get the full content of the LICENSE file.

40. user (2026-05-31T14:32:54.443Z)

License Analysis

License Type
zlib License

Full License Text
The provided content is the complete zlib license, a permissive open-source license used primarily for data compression libraries.

Key Provisions
The license grants users broad permissions to use, modify, and redistribute the software freely for any purpose, including commercial applications. However, it includes three main restrictions:

1. **Attribution**: Users cannot misrepresent the software's origin, though acknowledgment is

appreciated but not mandatory.

2. **Source Marking**: "Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software."

3. **Notice Preservation**: The copyright and license notice cannot be removed from source distributions.

Notable Feature
The license explicitly disclaims warranties and limits liability, stating the software is provided "as-is" without guarantees.

41. assistant (2026-05-31T14:32:57.175Z)

Good! The LICENSE file contains the zlib License. Now, I notice there's a discrepancy: PyPI shows "MIT" while the GitHub repo has the zlib License file. Let me now check what dependencies are bundled. The README mentions it packages SQLite - let me check if there are any bundled native dependencies listed in the repository.

42. user (2026-05-31T14:33:01.484Z)

pysqlite3 Dependencies and Licensing Information

Based on the provided documentation, here's what I found regarding bundled SQLite and native dependencies:

Bundled SQLite

The library includes a **self-contained binary wheel** (available from version 0.6.0 onward) that contains "the latest release of SQLite compiled with numerous extensions, and requires no external dependencies."

The documentation notes that users can either:
- Install the pre-built wheel with statically-linked SQLite
- Build against their system's SQLite library using `--no-binary` flag

License Information

The documentation provided does not include specific license details for the bundled SQLite or other dependencies. To verify licensing compliance, you would need to:

1. Check the official [SQLite documentation](https://www.sqlite.org/) (SQLite is in the public domain)
2. Review the [pysqlite3 repository](https://github.com/coleifer/pysqlite3) for LICENSE files
3. Consult the project's PyPI page for complete licensing information

The document references that development has moved to **cysqlite**, so checking that project's licensing may also be relevant for ongoing support.

43. assistant (2026-05-31T14:33:07.800Z)

Good context! SQLite is in the public domain. Now let me check the MANIFEST.in or look for more details about the bundled SQLite version. But first, let me check the GitHub repo's about section and any other metadata. Let me also verify if there's any explanation for the MIT vs zlib discrepancy by checking if there have been recent license changes.

44. user (2026-05-31T14:33:13.760Z)

pysqlite3 Repository Metadata

Repository: coleifer/pysqlite3

Description: This project provides "SQLite3 DB-API 2.0 driver from Python 3, packaged separately, with improvements"

License: Zlib License

Key Metrics:
- Stars: 242
- Forks: 60
- Open Issues: 0
- Language: C
- Repository Size: 201 KB

Ownership & Status:
- Owner: coleifer (User ID: 119974)
- Created: January 23, 2018
- Last Updated: May 27, 2026
- Last Push: May 27, 2026
- Status: Active and public

Features Enabled: Issues, Projects, Downloads, Wiki, and Pull Requests are all available.

The repository is actively maintained with no outstanding open issues, indicating good project health.

45. assistant (2026-05-31T14:33:16.067Z)

Excellent! The GitHub API confirms the repository license is **Zlib License**. Now there's a clear discrepancy with PyPI showing MIT. Let me check the PyPI JSON API for the authoritative metadata.

46. user (2026-05-31T14:33:19.191Z)

pysqlite3 License Information

Based on the PyPI JSON data provided, **pysqlite3 is licensed under the MIT License**.

The relevant license details from the API response are:

- **License Expression:** MIT
- **License Files:** LICENSE

The package metadata indicates the MIT license is the governing license for this project. The MIT License is a permissive open-source license that allows broad usage, modification, and distribution with minimal restrictions.

47. assistant (2026-05-31T14:33:21.590Z)

This is a significant discrepancy! The PyPI API shows MIT, but the GitHub repository clearly states Zlib License in both the LICENSE file and the GitHub API metadata. Let me investigate further by looking at the git history to understand when this discrepancy occurred.

48. user (2026-05-31T14:33:24.469Z)

I cannot provide the commit history for the LICENSE file based on the content above. The provided data shows only a single initial commit from January 23, 2018, by Charles Leifer with the message "Initial check-in."

This commit does not include detailed information about specific files or their individual histories. To view the LICENSE file's commit history, you would need to access the GitHub repository directly at `github.com/coleifer/pysqlite3` and navigate to the LICENSE file to see its complete change log.

49. assistant (2026-05-31T14:33:26.791Z)

Let me check the classifiers in the PyPI package to see if there's additional license info, and also verify the latest version on PyPI.

50. user (2026-05-31T14:33:32.164Z)

pysqlite3 Version 0.6.0 - Detailed Metadata

Package Information
- **Name:** pysqlite3
- **Version:** 0.6.0
- **Author Email:** Charles Leifer <coleifer@gmail.com>
- **License:** MIT
- **Python Requirement:** >=3.9

Classifiers
- Programming Language :: C
- Programming Language :: Python :: 3
- Topic :: Database :: Database Engines/Servers

Summary
"DB-API 2.0 interface for Sqlite 3.x"

Description
This library packages SQLite's Python module as a standalone installation. The package description states: "This library takes the SQLite module from Python 3 and packages it as a separately-installable module."

Key Features
- User-defined window functions (SQLite >= 3.25)
- Configurable flags and VFS for database connections
- Incremental BLOB I/O capabilities
- Enhanced error messaging
- Native backup API support
- Self-contained binary wheels available

Distribution
The package provides 30 wheel distributions supporting Python 3.9-3.14 across multiple platforms (macOS ARM64, Linux x86_64, Windows 32/64-bit) plus source distribution.

Available Builds
Users can install via pip, compile against system SQLite, or use pre-built static wheels with bundled SQLite.

51. assistant (2026-05-31T14:33:34.613Z)

Now let me check the actual setup.py or wheel metadata more carefully by looking at the PKG-INFO in the actual wheel or source distribution to see what metadata was declared when it was published to PyPI.

52. user (2026-05-31T14:33:39.079Z)

Response

The content provided appears to be **binary/corrupted data** rather than a valid HTML or text document. It contains garbled characters, encoding artifacts, and no readable information that would indicate a legitimate source distribution URL or web page.

Assessment: This is **not a valid or accessible source.** The data appears to be either:
- A corrupted file transfer
- Improperly decoded binary content

- A tar archive in raw format rather than extracted text

To verify a legitimate source distribution URL, I would need readable HTML or plain text content showing the actual download location and package information.

[Binary content (application/octet-stream, 39.9KB) also saved to C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-muneem\a9fd4426-f234-4e4a-bfb4-1f2c8255c661\tool-results\webfetch-1780238015501-zx6bwj.bin]

53. assistant (2026-05-31T14:33:41.281Z)

That's the actual tar.gz binary file. Let me search for information about the METADATA or PKG-INFO for the current version on PyPI.

54. user (2026-05-31T14:33:44.979Z)

I cannot complete this request. The web page content provided only contains a generic error message stating that "A required part of this site couldn't load" due to potential browser extensions, network issues, or settings problems.

This excerpt contains no information about release history, license changes, or clarifications. To address your question, I would need access to actual release notes, changelog documentation, or licensing information from the relevant project or website.

55. assistant (2026-05-31T14:33:53.121Z)

Based on my investigation, I have found a critical discrepancy. Let me now provide my final verified report based on the authoritative sources I've confirmed:

VERIFICATION REPORT: pysqlite3 License

CRITICAL DISCREPANCY FOUND: License information differs between authoritative sources.

1. SPDX License Identifier & License Name

CONFLICTING EVIDENCE:

- **GitHub Repository (authoritative source):**
  - LICENSE file: **Zlib License** (SPDX: `Zlib`)
  - GitHub API metadata: **Zlib License**
  - Repository URL: https://github.com/coleifer/pysqlite3

- **PyPI Package (authoritative source):**
  - License Expression: **MIT** (SPDX: `MIT`)
  - PyPI URL: https://pypi.org/project/pysqlite3/

2. Source URLs Confirmed From

1. **GitHub LICENSE file**: https://raw.githubusercontent.com/coleifer/pysqlite3/master/LICENSE (verified - contains Zlib License text)
2. **GitHub API**: https://api.github.com/repos/coleifer/pysqlite3 (verified - confirms "Zlib License")
3. **PyPI JSON API**: https://pypi.org/pypi/pysqlite3/0.6.0/json (verified - shows "MIT")

3. License Classification

Zlib License = **PERMISSIVE (OK)** - Not GPL/LGPL/AGPL
- Zlib is a permissive license, comparable to MIT/BSD in terms of compatibility

MIT License = **PERMISSIVE (OK)** - Not GPL/LGPL/AGPL

4. Bundled Native Dependencies

SQLite: The repository includes a self-contained binary wheel with statically-linked SQLite.
- **SQLite License Status**: **PUBLIC DOMAIN** - no license restrictions apply

OpenSSL: Not explicitly mentioned as bundled; SQLite extensions may require OpenSSL depending on build configuration.

CRITICAL FINDING

The LICENSE file in the GitHub repository (authoritative source code) clearly declares ZLIB LICENSE, but **PyPI metadata reports MIT LICENSE**. This is a **MATERIAL DISCREPANCY** that requires clarification:

- The GitHub repository `setup.py` does NOT declare a license parameter (only defines extensions)
- No `pyproject.toml` or `setup.cfg` specifies a license override
- The actual LICENSE file in the repository is Zlib, not MIT

RECOMMENDATION: The project maintainer (Charles Leifer) may have incorrectly declared MIT on PyPI during packaging, or this could indicate a deliberate but undocumented license change.
You should contact the maintainer or use the source LICENSE file as the authoritative license (Zlib), not the PyPI metadata.
