Adversarial Claim Verifier (voter 2/3)

Be SKEPTICAL. Try to REFUTE this claim. ?2/3 refutations kill it.

Research question

Find promising AND reliable open-source tools/libraries for parsing Indian bank statement PDFs ? especially HDFC Bank savings/transaction statements ? into structured transaction rows (date, narration, ref, value date, withdrawal, deposit, closing balance), for reuse in a LOCAL-FIRST Python personal-finance tool ("muneem").

HARD CONSTRAINTS (a tool that violates these is unusable for us):
1. Must run 100% LOCALLY. Bank statements are highly sensitive ? NO cloud APIs, NO paid SaaS (e.g. bankstatementconverter.com, docparser, LLM extraction APIs). Paid/cloud is not acceptable even as a default.
2. Must be usable from Python.
3. License MUST be permissive & commercially safe: MIT, BSD, Apache-2.0, ISC, HPND. AVOID and explicitly FLAG anything GPL/LGPL/AGPL or that depends on copyleft native components ? in particular Camelot/tabula's reliance on Ghostscript (AGPL) or a Java runtime. PyMuPDF (AGPL) is already banned for us.

Specifically evaluate and compare these table-extraction approaches, for each giving: license (AND license of native deps), maintenance status (latest release + activity as of 2025/2026), reliability on SEMI-RULED / partially-borderless tables (HDFC's transaction table is not fully line-ruled), and password-protected-PDF support:
- pdfplumber (we already use it; MIT)
- Camelot ? camelot-py vs the maintained "pypdf_table_extraction" fork; its Ghostscript/OpenCV deps
- tabula-py (tabula-java + JVM)
- pypdfium2-based table extraction
- any other notable local options

Also assess the user's idea: "convert the PDF table to Excel/CSV first, then parse" ? is an intermediate CSV/Excel extraction more reliable than direct coordinate/text parsing, and which LOCAL+permissive tools do PDF?CSV/Excel table conversion well?

Finally, search for any existing, maintained, permissively-licensed open-source projects specifically for parsing Indian bank statements (HDFC/ICICI/SBI/Axis) or bank statements generally, that we could reuse or learn from (GitHub/PyPI).

Deliver a ranked shortlist of the most promising + reliable + license-safe options for HDFC statement parsing in a local Python tool, each with its license (and native-dep licenses), maintenance status, strengths/weaknesses for this use case, and a concrete recommendation for muneem (reuse library X vs. hand-roll coordinate clustering with pdfplumber). Cite sources.

Claim under review

"Camelot (the current 2.0.0rc1 / pypdf_table_extraction line served at camelot-py.readthedocs.io) is licensed under the permissive MIT License, satisfying muneem's commercial-safe license constraint for the Python library itself."

Source: https://camelot-py.readthedocs.io/ (primary)
Supporting quote: "MIT License

Copyright (c) 2019-2024 Camelot Developers Copyright (c) 2018-2019 Peeply Private Ltd (Singapore)

Permission is hereby granted, free of charge, to any person obtaining a copy of this software..."

Checklist

1. Is the claim actually supported by the quote, or is it an overreach/misread?
2. WebSearch for contradicting evidence ? does any credible source dispute or heavily qualify this?
3. Is the source quality sufficient for the claim's strength? (extraordinary claims need primary sources)
4. Is the claim outdated? (check dates ? old claims about fast-moving fields are suspect)
5. Is this a marketing claim / press release / cherry-picked benchmark / forum speculation?

refuted=true if: unsupported by quote / contradicted / low-quality source for strong claim / outdated / marketing fluff.
refuted=false ONLY if: claim is well-supported, current, and source quality matches claim strength.
Default to refuted=true if uncertain.

Structured output only. Evidence MUST be specific.

2. assistant (2026-05-30T19:16:34.454Z)

I'll verify this claim about Camelot's licensing. Let me check primary sources directly.

3. assistant (2026-05-30T19:16:37.041Z)

Let me investigate the claim by checking the primary source (the readthedocs license page) and the actual repository licensing.

4. user (2026-05-30T19:16:39.392Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

5. user (2026-05-30T19:16:46.479Z)

I cannot provide the requested information based on the content above. The web page only displays an error message indicating that "A required part of this site couldn't load," which prevents access to package details such as licensing information, version numbers, release dates, and dependencies.

To obtain this information, you would need to:
- Resolve the loading issue by checking your internet connection
- Disable any active ad blockers
- Try accessing the site with a different browser
- Visit the package repository directly (such as PyPI, npm, or similar platforms)

6. assistant (2026-05-30T19:16:48.915Z)

Both initial fetches failed. Let me try the GitHub repository directly and the readthedocs root, which are the authoritative sources for licensing.

7. user (2026-05-30T19:16:53.101Z)

License Summary

This software uses the **MIT License** with dual copyright holders:

> "Copyright (c) 2019 Camelot Developers"

and the original work:

> "Copyright (c) 2018 Peeply Private Ltd (Singapore)"

The MIT License grants broad permissions for use, modification, and distribution. The key requirement is that the license notice and copyright attribution must accompany any copies or substantial portions of the software. The software carries no warranties and the authors accept no liability for its use.

8. user (2026-05-30T19:16:56.458Z)

Web search results for query: "pypdf_table_extraction camelot-py 2.0.0 license MIT fork repository"

Links: [{"title":"Camelot: PDF Table Extraction for Humans ? Camelot 2.0.0rc1 documentation","url":"https://camelot-py.readthedocs.io/"},{"title":"camelot-py 0.2.2","url":"https://pypi.org/project/camelot-py/0.2.2/"},{"title":"camelot-py · PyPI","url":"https://pypi.org/project/camelot-py/"},{"title":"camelot-py - PDF Table Extraction for Humans.","url":"https://pypi.org/project/camelot-py/0.2.0/"},{"title":"GitHub - py-pdf/pypdf_table_extraction: A Python library to extract tabular data from PDFs · GitHub","url":"https://github.com/py-pdf/pypdf_table_extraction"},{"title":"pypdf-table-extraction · PyPI","url":"https://pypi.org/project/pypdf-table-extraction/"},{"title":"GitHub - alexfazio/pypdf_table_extraction: A Python library to extract tabular data from PDFs","url":"https://github.com/alexfazio/pypdf_table_extraction"},{"title":"Integration of Camelot in py-pdf · py-pdf/pypdf · Discussion #2466","url":"https://github.com/py-pdf/pypdf/discussions/2466"},{"title":"Releases · py-pdf/pypdf_table_extraction","url":"https://github.com/py-pdf/pypdf_table_extraction/releases"},{"title":"How to Extract Tables from PDF in Python - The Python Code","url":"https://thepythoncode.com/article/extract-pdf-tables-in-python-camelot"}]

Based on the search results, here's what I found about your query:

pypdf_table_extraction and Camelot

pypdf_table_extraction, formerly known as Camelot, is a Python library that can help you extract tables from PDFs.

Repository and Fork

The py-pdf/pypdf_table_extraction repository is a public archive forked from camelot-dev/camelot. This fork was created within the py-pdf organization to maintain the Camelot project after the original maintainers moved on.

License

The project is licensed under the MIT License, see the LICENSE file for details.

Version Status

The Camelot library reached release v2.0.0rc1. However, it's worth noting that the PyPI package for pypdf-table-extraction is deprecated with a note to please use camelot-py instead.

Key Features

Camelot is a Python library that can help you extract tables from PDFs. Each table is extracted into a pandas DataFrame, which seamlessly integrates into ETL and data analysis workflows, and tables can be exported to multiple formats including CSV, JSON, Excel, HTML, Markdown, and Sqlite.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

9. assistant (2026-05-30T19:16:59.375Z)

The MIT License claim is confirmed by multiple sources. Let me verify the specific source cited in the claim (camelot-py.readthedocs.io) and the canonical GitHub repo's LICENSE to confirm the exact copyright text and that the 2.0.0rc1 line is indeed MIT.

10. user (2026-05-30T19:17:03.339Z)

License Summary

The document presents an **MIT License** with the following copyright holders:

- "Copyright (c) 2024 pypdf_table_extraction Developers"
- "Copyright (c) 2019-2023 Camelot Developers"
- "Copyright (c) 2018-2019 Peeply Private Ltd (Singapore)"

The license grants users broad permissions to use, modify, and distribute the software freely. A key provision states: "The Software is provided as-is without warranties of any kind" and limits liability for the authors and copyright holders.

The MIT License is one of the most permissive open-source licenses available, requiring only that the original copyright notice and license text accompany any distribution of the software.

11. user (2026-05-30T19:17:03.488Z)

The license field in the pyproject.toml is:

`license = "MIT"`

12. assistant (2026-05-30T19:17:09.230Z)

The claim is well-supported across multiple primary sources. Let me do one targeted skeptical check: the claim names the specific source camelot-py.readthedocs.io and the 2.0.0rc1 line. I've confirmed the GitHub repo (py-pdf/pypdf_table_extraction) LICENSE is MIT. Let me verify the readthedocs site itself carries the MIT statement to confirm the cited source actually says what's quoted.

13. user (2026-05-30T19:17:09.706Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

14. user (2026-05-30T19:17:14.475Z)

Camelot Documentation Version and License

Documentation Version: v2.0.0rc1

License: MIT License

The documentation references the Camelot License in the Introduction section. While the full MIT

License text isn't displayed in this particular web page excerpt, the project is identified as operating under MIT licensing terms, as indicated by the badge linking to PyPI project information.

15. assistant (2026-05-30T19:17:25.957Z)

I have sufficient evidence to evaluate the claim. Let me summarize my findings.

Claim: "Camelot (the current 2.0.0rc1 / pypdf_table_extraction line served at camelot-py.readthedocs.io) is licensed under the permissive MIT License, satisfying muneem's commercial-safe license constraint for the Python library itself."

Findings from primary sources:

1. **Quote support:** The supporting quote (MIT License, "Copyright (c) 2019-2024 Camelot Developers / Copyright (c) 2018-2019 Peeply Private Ltd") matches the actual LICENSE files. The canonical py-pdf/pypdf_table_extraction LICENSE I fetched directly states: MIT License, "Copyright (c) 2024 pypdf_table_extraction Developers / Copyright (c) 2019-2023 Camelot Developers / Copyright (c) 2018-2019 Peeply Private Ltd (Singapore)". The claim's quote is a faithful (slightly condensed) rendering ? not an overreach.

2. **pyproject.toml** of py-pdf/pypdf_table_extraction (main branch) declares `license = "MIT"` verbatim.

3. **readthedocs (camelot-py.readthedocs.io)** confirms it serves v2.0.0rc1 documentation and identifies the project as MIT-licensed in its Introduction ? the cited source says what the claim says it says.

4. **Independent corroboration:** WebSearch summary and the original camelot-dev/atlanhq LICENSE both confirm MIT across the lineage.

5. **Currency:** 2.0.0rc1 is the current/recent release line; documentation matches. Not outdated.

Scope check (important ? claim is narrowly worded): The claim is carefully scoped to "the Python library itself" ? it does NOT assert the full dependency stack (Ghostscript/AGPL, OpenCV) is permissive. So muneem's broader copyleft-via-native-deps concern is a *separate* claim and does not refute *this* one. This claim only asserts the Python library's own license is MIT, which is true.

The claim is well-supported by multiple primary sources (LICENSE files, pyproject.toml, official docs), current, and the source quality (primary project files) matches the claim's strength. I could not refute it.

16. user (2026-05-30T19:17:31.569Z)

Structured output provided successfully

17. assistant (2026-05-30T19:17:35.410Z)

Verification complete. The claim that Camelot/pypdf_table_extraction (2.0.0rc1 line) is MIT-licensed for the Python library itself is **VERIFIED (refuted=false, high confidence)** ? confirmed by the actual LICENSE file, pyproject.toml `license = "MIT"`, and the cited readthedocs source, with independent corroboration. The claim is correctly scoped to the library's own license and does not overreach into the (separate, genuinely concerning) Ghostscript/AGPL native-dependency question.
