```
You are auditing a badminton rally-detection codebase for DOC/COMMENT STALENESS ? statements
that CONTRADICT the current code or data.
HARD RULES:
- Report ONLY factual staleness with CODE EVIDENCE (file:line or symbol) that proves it. Open
the cited code and confirm before reporting.
- NEVER invent a fact or a status. If a thing is built-but-default-OFF / unwired / unmeasured,
say EXACTLY that ? do not overclaim "in production".
- A "[design]" tag is stale ONLY if the thing is actually BUILT in code (cite the symbol).
- DO NOT propose subjective rewrites, style/tone changes, or improvements. DO NOT relitigate
owner-gated DECISIONS (owned-model roadmap, licensing/MIT-Apache stance, product/strategy
choices, genuinely-still-design proposals).
- Preserve the document's voice and formatting; make the SMALLEST surgical edit. stale_text MUST
be copied verbatim with enough context to be unique.
- IGNORE docs/archives/** (terminal snapshots) and any memory/ file.
Working dir is the repo root; use Read/Grep/Glob freely.

ADVERSARIALLY VERIFY these proposed staleness fixes for ONE file: docs/NEXT_STEPS.md.
For EACH proposed fix: (1) open docs/NEXT_STEPS.md and confirm stale_text appears VERBATIM
(tighten/expand it to an exact, UNIQUE match if needed ? this text will be applied by exact
string match, so it must be perfect); (2) re-open the cited code yourself and confirm the claim
is genuinely contradicted by the CURRENT code; (3) confirm corrected_text is accurate, preserves
voice, and is minimal; (4) DROP it if it is subjective, an owner-gated decision, already-
correct, or you cannot verify the evidence. Output ONLY the survivors (verdict confirm or
revise), with stale_text guaranteed to be an exact unique substring of the file.

PROPOSED FIXES:
```

```
[
  {
    "file": "docs/NEXT_STEPS.md",
    "stale_text": "**Immediate next step ? the real P3 LOVO measurement, split GPU?CPU** (the
dev box is CPU-only: `torch+cpu`/`cv2` present but no GPU, and the corpus/videos/CSVs/labels are
not here):",
    "corrected_text": "**Immediate next step ? the real P3 LOVO measurement** (GPU + torch
(`torch+cu124`) + cv2 are present here, but the corpus/videos/CSVs/labels are not ? those remain
owner-side):",
    "why_stale": "Asserts 'the dev box is CPU-only: torch+cpu present but no GPU'. Verified
directly: torch 2.6.0+cu124 with torch.cuda.is_available()==True, plus cv2 4.13.0. The
environment has a GPU and a CUDA torch build, contradicting 'CPU-only / torch+cpu / no GPU'.
(The corpus/videos/labels-not-here part is left intact.)",
    "severity": "medium"
  },
  {
    "file": "docs/NEXT_STEPS.md",
    "stale_text": "- ? Dev container no GPU/torch/cv2 ? Gate A, person cue logic, harness, and
```

pure fusion paths are testable here; real-video / golden LOVO / ablation confirmation is owner-side (GPU/WSL machine).",
    "corrected_text": "- ? Gate A, person cue logic, harness, and pure fusion paths are testable here; the heavier real-video / golden LOVO / ablation confirmation is owner-side (the golden corpus + labelled videos live on the owner's machine).",
    "why_stale": "Says 'Dev container no GPU/torch/cv2'. Verified directly: torch 2.6.0+cu124 (cuda True) and cv2 4.13.0 both import in this environment, so 'no GPU/torch/cv2' is false. (The owner-side real-video/golden-LOVO point is preserved, reframed around corpus location rather than missing GPU.)",
    "severity": "medium"
  }
]

2. assistant (2026-06-19T15:52:38.626Z)

I'll verify these two proposed fixes against the actual file content and the current environment.

3. user (2026-06-19T15:52:39.582Z)

1 # Next steps (live) ? owned-model + multisport
2
3 **Updated:** 2026-06-13 (**rally-detection quality track**: fusion + experiment-harness design docs merged,
4 owner-gated ? see the dedicated section below, the desktop-agent pick-up). Prior: 2026-06-10 (audit?M0?Gemini-battery session; later same day the **UI-alpha track opened**:
5 ADR-009 ratified ? KhelSutra Guru / khelsutra.guru, private `khelsutra` repo, local-first delivery ? see
6 `docs/UI_ALPHA_EXECUTION_PLAN.md`; **PR-1 async jobs (#16) MERGED 2026-06-11, PR #87**; **PR-2
7 upload/download MERGED 2026-06-11, PR #99** ? live-E2E-verified (3-part chunked upload MD5 byte-identity +
8 compile?browser-download); next: PR-3 identity. Same day: the **8?9 quality sweep #90?#98 landed** ? ruff/mypy/
9 coverage-floor CI lanes, SQLite conn-close fix, config unknown-key warning, hybrid-twin collapse into
10 `trajectory_hybrid.py`, WSL tilde+abspath live-path fixes; suite 388 green; LOVO 0.626 re-verified exact).
11 **Authoritative roadmap:**
12 `docs/OWNED_MODEL_IMPLEMENTATION_PLAN.md` (+ ADR-008 for topology). **Latest blow-by-blow:** memory
13 `current-state.md` / `session-handoff.md`. This file = the prioritized "what to do next," refreshed each session.
14
15 ## ? Next-session / GPU-box pickup (2026-06-15)
16 **M0 in-container quick wins are COMPLETE:** ship-gate provisional blocker (**#170**), train/eval split guard (**#171**), the **doc-consistency sweep** (**#174** ? corrected 16 drifted docs vs the code), and the **P3 person-feature fusion litmus machinery is already present + suite-green** (`backend/eval/fusion_compare.py` + `ablation.py`: person-driven ?F1 / bootstrap CI / paired sign test; the real-golden `skipif` litmus waits only on GPU-extracted data). ? CI is red repo-wide due to a **GitHub Actions minutes/billing outage** (account-level, not code) ? work is local-gated + `--admin`-merged until Actions is restored (Settings ? Billing ? Actions minutes / spending limit).
17
18 **Immediate next step ? the real P3 LOVO measurement, split GPU?CPU** (the dev box is CPU-only: `torch+cpu`/`cv2` present but no GPU, and the corpus/videos/CSVs/labels are not here):
19 1. **[owner / GPU box]** `python -m backend.eval.fusion_golden --manifest output/human_lovo_manifest.json --out-dir "%USERPROFILE%\OneDrive\rally-annotator\golden-data\features\2026-06-15-n6"` ? produces `*_golden_features.json` for the 6 golden videos. (GPU + WSL + videos + trajectory CSVs + `.rallies.csv` labels are owner-side only.)
20 2. Artifacts land in the **shared cloud folder** `C:\Users\avidu\OneDrive\rally-annotator\golden-data\` (OneDrive auto-syncs both ways). Convention + workflow: **[`GOLDEN_DATA_SHARING.md`](GOLDEN_DATA_SHARING.md)**; tracked in **#175**.
21 3. **[CPU dev/agent session]** `python -m backend.eval.fusion_compare --features-dir <shared>\features\2026-06-15-n6 --record` + `python -m backend.eval.ablation --features-dir

<shared>\... --granularity group` ? real person-feature ?F1; copy the JSONs into `output/` to also pass the `skipif` litmus tests (`tests/test_ablation.py::test_litmus_reproduces_gate_a`).

Also queued (owner-gated / pending input):
- Ship-gate target calibration ? **#172** (owner decision; needs corpus growth).
- Tests reorganization ? blocked on the owner's grouping metric (provide it ? an agent will do it).
- Restore CI ? the Actions outage is account-level (billing/minutes), not a repo/config bug.

Leaving (bulky / M2 ? no start without owner go): ActionFormer (M0.4), event-index DB migration (M0.1), Gemini-silver purge (M0.3), cost-to-Gen-2 benchmark + ByteTrack deprecation, multisport, repo rename, PMF execution.

Where we are (one paragraph)
ADR-008 ratified ("repo split driven by productionization, not isolation"): training lives in-repo (`training/`)
behind a CI-enforced import wall; the featurizer is single-sourced (`backend/features/rally_seq.py`, train==serve);
the **Gen-0 harness ships** (`python -m training.gen0.harness --manifest output/human_lovo_manifest.json --floor
eval_baselines/heuristic_lovo_n6.json --version <semver>`) and produced artifact v0.1.0 (LOVO **0.626**, floor passed,
sign test 5/6 wins p=0.109 ? honestly not significant, ship=False). The **n=6 owned corpus is in the collector**
(262 rallies, Proprietary, commercial export = owned data only after the ShuttleSet reclassification). The **Gemini
battery is done** (see table) ? the moat is quantified.

The quality table that now drives strategy (IoU 0.5 vs human golden labels)
Path	Mahadevpura (clean-ish)	Kushagra (multi-court)
Heuristic (velocity windowing)	0.657	0.157
Gen-0 owned head (LOVO, n=6)	0.744	0.561
Two-stage WASB+Gemini refine	0.83	?
Gemini wrapper (`gemini-flash-latest`)	**0.93**	**0.66**

Reading: clean footage is commoditized (serve it with Gemini for cents). **Multi-court drops the commodity
wrapper to 0.66 ? that is the owned model's ship target** (its FPs are background-game pickups + dead-time merges,
the exact contrast-metric confound). Gen-0 is 0.10 behind with only n=6 ? a corpus-growth-sized gap, not an
architecture-sized one. Two-stage refine = the cost-efficient serving path for LONG tapes (uploads candidate clips
only); wrapper 503-flakiness (observed all session) makes the provider-fallback registry load-bearing.
Baselines tracked in `eval_baselines/` (heuristic_lovo_n6.json, gemini_wrapper_2026-06-10.json).

Rally-detection quality track (design merged 2026-06-13, owner-gated; implementation in progress)
This is the track a desktop/local agent is slated to pick up. Design docs landed (PR #112 + session). All implementation is **owner-gated** (per explicit in the plan); each step = ONE PR off `master`.

Hardening loop (T1-T5 positive tests + audit + finale) COMPLETE (2026-06-14, PRs #156/#157/#160/#161/#163 + #165 + final records). See archived `docs/archives/CODE_AUDIT_AND_TEST_HARDENING-COMPLETED-2026-06-14.md` (Living Log with every pre/post/review) and `docs/archives/HARDENING_LOOP_HANDOFF-COMPLETED-2026-06-14.md` (full rules + STATE). Top-level now pointer stubs per #165 review. All 5 items + verification + archive done; clean slate.

- **Docs:** `docs/MULTI_SIGNAL_FUSION_PLAN.md` (shuttle + person + audio, one fusion layer) ·

60 `docs/EXPERIMENT_HARNESS.md` (A/B + shadow + promotion gate, zero-regression) ·
61 `docs/ROORA_LABELING_GUIDELINES.md` (v8) · `docs/HOW_RALLY_DETECTION_WORKS.md` (2-layer mental model).
62 - **Key finding (no re-investigation needed):** the owner's "held-shuttle counted as a rally" bug is **NOT a missing capability** ? `backend/pipeline/detectors/rally_gate.py` already implements the net-crossing **"Gate A"** (`apply_gate(..., min_crossings=2)`) that kills service-feed/held-shuttle windows, but it is **only called from eval drivers** (and there was no `min_crossings` knob in `IndexingConfig`). **Wiring Gate A into the live segmenter (now via fusion_hybrid) was the single cheapest, highest-confidence quality win.** (P2 FusionSegmenter specifics: registry `fusion_hybrid`, **default-OFF**, seeds from substrate, persists `net_crossings` + optional person features, optional served Gate A/B via config knobs; adversarially reviewed; suite green. See `tests/test_served_gate_a_regression.py` for the honest finding that on production windowing Gate A is neutral/negative in some cases, hence kept opt-in with knob for safety, and the leaderboard revert note.)
63 - **Current status (2026-06-14):** P1 (person cue extraction to reusable `PersonDetector`) + P2 (FusionSegmenter + Gate A signal + served handoff gating) + experiment harness P1 DONE (adversarial review + NO-REGRESSION; suite green). **P3 next (this PR + follow-ups):** learned fusion (person features ? harness `compare` LOVO lift on the 6 golden videos; eager-person-compute optimisation); then P4 audio via hit_detector.
64 - **Pick-up order (each = ONE PR off `master`, owner approval first, flag-gated default-OFF, promote only on measured LOVO):**
65 1. (P2 first-step, largely done via fusion_hybrid) Wire Gate A into production served path + config knob (min_crossings); apply in hybrids at runtime. (Now available opt-in; served neutral on production windowing per litmus ? kept opt-in with knob for safety.)
66 2. P3 first step (this work item): harness `compare` LOVO litmus for person-on variant (players_in_court + two_sided + colocation etc. from `fusion_features`) on the 6 golden; add the eager compute optimisation note/landing. Pure + harness (testable here).
67 3. P3/P4 continuation: audio cue integration + full learned promotion if lift proven.
68 - **Discipline (from EXPERIMENT_HARNESS.md):** every new cue **flag-gated, default OFF**; promote to default **only on measured LOVO lift** through `run_regression.py` (exit 0/1/3); pinned `CONTROL` ? rollback = config flip. Harness re-uses ~80% existing code.
69 - ? Dev container no GPU/torch/cv2 ? Gate A, person cue logic, harness, and pure fusion paths are testable here; real-video / golden LOVO / ablation confirmation is owner-side (GPU/WSL machine).
70 - **External due-diligence review inputs (2026-06-17) ? PICK UP AFTER current ideas are exhausted; full details + citations in [`RALLY_QUALITY_RESEARCH.md`](RALLY_QUALITY_RESEARCH.md) §5.6.** An owner-commissioned 31-reference review of the quality report *validated* the methodology and surfaced these **future** levers (research inputs, not active work, not new claims; verify citations before any submission):
71 1. **"First-mile" paper framing (highest-value):** stroke-classifiers (BST/DSTA) + the big datasets (ShuttleSet ~36k strokes, Fine-Badminton ~27k actions) all **assume a pre-trimmed rally clip already exists** ? we solve the ignored prerequisite. Pitch the paper as *"the missing untrimmed-video preprocessing pipeline that lets BST/MonoTrack run on raw footage."*
72 2. **Ground R2 in Action-Spotting / Precise-Event-Spotting** (SoccerNet/TenniSet/T-DEED) ? turns R2 into a defensible publishable contribution.
73 3. **Add domain baselines for any submission:** MonoTrack + BST on ShuttleSet / Fine-Badminton (we have only heuristic + Gemini today).
74 4. **Prefer TemporalMaxer over ActionFormer** for the M0.4 scorer swap (parameter-free max-pool, ~2.8× fewer GMACs, small-N robust) ? see "M0.4 next increment" below.
75 5. **Court polygons ? pose ? the rally-END lever:** masking on-court players can resolve *occluded end-of-rally states* (the #1 remaining gap vs Gemini), not just spectator noise.
76 6. **Name the eval?serve lesson "pipeline distribution skew"** ? a citable paper "lesson."
77
78 **Discipline reminder:** owner approval before starting any owner-gated item; one PR per step; babysit the PR (poll/fix/reply) until merge observed, *then* advance.
79
80 ## Prioritized next steps
81 1. **[owner, in progress] GROW THE GOLDEN CORPUS** ? the single highest-leverage move; every lever below feeds on it.
82 Priority order for new videos: **(a) multi-court badminton** (the target distribution AND where the ship target
83 lives), **(b) ?3 matches per new sport ? table tennis first** (WASB transfers at F1 0.909; pickleball labels are

corpus-gold but not trainable until a clean MIT/Apache ball detector exists), (c) capture variety per
`VIDEO_RECORDING_GUIDELINES.md`; **adult sessions only for the training pool** (consent guardrail). Per video:
label ? `curate import-local --normalize --license Proprietary --fps <true fps>` ? re-run the Gen-0 harness.
The paired sign test needs n: at n=10 with 9 wins, p?0.011 ? significance is reachable this month.
2. **[owner decision] Set the ship-gate target** ? now informed: floor = heuristic 0.480 (necessary), **multi-court
reference = wrapper 0.66** (the number that makes the owned model worth serving), clean-footage ceiling = 0.93
(not the target ? Gemini serves that tier). Suggested shape: "LOVO F1@tIoU0.5 ? 0.70 on multi-court folds with
paired-sign p<0.05 vs heuristic" ? owner to ratify/adjust.
3. **M0.4 next increment ($0/local):** swap the Gen-0 LogReg for a lightweight temporal head (MIT, minutes on the
2070S ? NOT the heavyweight Gen-2 stack) inside the existing harness; per-video threshold calibration (the
LOVO-vs-oracle gap is visible per fold in the harness output). **Prefer TemporalMaxer** (parameter-free
max-pool, ~2.8× fewer GMACs, small-N robust) over ActionFormer/ASFormer per the 2026-06-17 external review
(`RALLY_QUALITY_RESEARCH.md` §5.6) ? better fit for the cheap/local/fast mandate.
4. **Multisport thread:** ingest Roora pickleball/TT CSVs (`import-local --normalize`); merged-prototype LOVO across
badminton+TT once TT has ?3 matches; identify a clean pickleball ball detector. ? TT-on-WASB serving stays gated
by C3 (provenance multiplies per sport).
5. **PMF validation (cheaper than any engineering month):** C13 academy interviews (+ the two added questions:
"multi-court footage nobody watches?" / "pay per-match to index it?"); camera pilot at the warmest 2-3 academies
(consent at capture; demo served via the Gemini path or human-polish ? the reel pattern exists:
`output/MahadevpuraSingles_highlights.mp4`). **Field kit COMPLETE (2026-06-12, owner ratified the
physical-visit approach; reframed product-feedback-first per owner spec):**
`docs/PRODUCT_FIELD_ASSOCIATE_FLYER.md` (the recruiting flyer ? owner fills ?/contact placeholders and recruits) +
`docs/FIELD_VISIT_PLAYBOOK.md` (the hired associate's visit playbook: coach + student script, demo-after-Q6
rule, ground rules, Phase-2 record-and-show-back stretch goal) + `docs/FIELD_VISIT_ANSWER_SHEET.md` (per-visit
capture form incl. demo-reaction + student blocks) + `docs/PMF_FIELD_SIGNALS.md` (G/A/R anchors + **pre-registered
decision rules** ? PROCEED / PIVOT A-C / FALSIFIED thresholds fixed before the first visit).
6. **Housekeeping:** ~~rotate the Gemini API key~~ **DONE 2026-06-10** (owner-verified working; confirm old-key
deletion in AI Studio); **rename repo off "badminton"** (owner action,
in BACKLOG); collector=SoR confirmation; off-peak niceties: none pending ? the battery completed.

```
torch 2.6.0+cu124
cuda_available True
cv2 4.13.0
```

5. assistant (2026-06-19T15:52:50.388Z)

Both fixes target the environment-capability claims. I've confirmed the environment has torch 2.6.0+cu124 (CUDA available True) and cv2 4.13.0. Now let me verify the exact text matches and check whether the corpus/data claims (which the corrected text preserves) are accurate.

Let me verify the exact stale_text strings appear verbatim and are unique.

6. user (2026-06-19T15:52:51.869Z)

```
18:**Immediate next step ? the real P3 LOVO measurement, split GPU?CPU** (the dev box is CPU-
only: `torch+cpu`/`cv2` present but no GPU, and the corpus/videos/CSVs/labels are not here):
```

7. user (2026-06-19T15:52:52.929Z)

```
69:- ? Dev container no GPU/torch/cv2 ? Gate A, person cue logic, harness, and pure fusion paths
are testable here; real-video / golden LOVO / ablation confirmation is owner-side (GPU/WSL
machine).
```

8. assistant (2026-06-19T15:52:58.860Z)

Both stale_text strings appear verbatim and uniquely. Now I need to consider a subtlety on fix #1. The corrected_text changes `torch+cpu` to `torch+cu124`. Let me verify the exact CUDA build string to ensure accuracy.

The torch version reported is `2.6.0+cu124`, so `torch+cu124` is an accurate characterization. Let me also double-check fix #1's corrected_text doesn't introduce a problem: the original says "split GPU?CPU" in the bold header, and the corrected text drops that. That's consistent with the new claim (no longer a GPU/CPU split since GPU is present here). The data-not-here portion is preserved.

Now let me verify the "corpus/videos/CSVs/labels are not here" claim is still accurate ? that the preserved portion is true. Let me check whether the golden corpus paths exist locally.

```

10. assistant (2026-06-19T15:53:04.944Z)

This is an important nuance. The trajectory CSVs and golden-data folder ARE present on this machine (under `C:/Users/avidu/Projects/Annotation Setup/Collect/Trajectories/` and the OneDrive `golden-data/` folder). The `output/human_lovo_manifest.json` also exists locally.

This complicates the "the corpus/videos/CSVs/labels are not here" preserved claim. Let me check more carefully what's actually present vs. absent ? specifically the videos and the labelled `.rallies.csv` files.

=== rallies.csv labels ===
```

12. assistant (2026-06-19T15:53:18.225Z)

The data picture is mixed. Videos and trajectory CSVs ARE present on this machine, but the `Golden Labelled/` directory does not exist, and the `golden-data/features/` and `trajectories/` subfolders are empty. So the labelled `.rallies.csv` files and extracted golden features are genuinely absent here.

This matters for assessing the corrected_text of both fixes, which assert the data is "not here." Let me look at this precisely:

Fix #1 corrected_text: "the corpus/videos/CSVs/labels are not here ? those remain owner-side" ? but videos AND trajectory CSVs ARE here. Only the labels/golden-features are absent. So this corrected_text would introduce a NEW inaccuracy (claiming videos/CSVs are not here when they are).

Fix #2 corrected_text: "the golden corpus + labelled videos live on the owner's machine" ? this is on the owner's machine, but it IS also this machine (the owner's own machine ? the env is the owner's Windows box per the OneDrive/Projects paths). The corrected text reframes around "owner's machine," and the labelled data genuinely isn't extracted/present.

The core verified fact for BOTH fixes is the same and solid: the GPU/torch/cv2 claim is false. That part is unambiguously stale and the primary subject of both fixes. Let me confirm this is the owner's own machine (not a separate "dev container") to validate the framing.

```
user: avidu
host: AVIS-MSI
NVIDIA GeForce RTX 2070 Super with Max-Q Design, 8192 MiB
```

14. assistant (2026-06-19T15:53:31.994Z)

This is confirmed: the machine is `AVIS-MSI` (the owner Avi's MSI laptop, the "2070S" referenced in the doc itself at line 93), with an RTX 2070 Super GPU, torch+cu124, and cv2. The "dev container no GPU/torch/cv2" / "CPU-only" claims are unambiguously false ? this is the owner's GPU box.

Now let me finalize the assessment of each fix:

Both fixes: The core staleness ? the GPU/torch/cv2 capability claim ? is genuine and well-evidenced. Confirm on that.

Fix #1 ? the data-location refinement needs revision. The corrected_text says "the corpus/videos/CSVs/labels are not here." But I verified videos (`*.MP4`) and trajectory CSVs (`*_traj.csv`) ARE present on this machine. What's genuinely absent: the `Golden Labelled/` directory (the `.rallies.csv` labels) and extracted golden features. The doc's line 19 specifies the data that's owner-side-only as "GPU + WSL + videos + trajectory CSVs + `.rallies.csv` labels." Since I found videos and traj CSVs present, asserting they're "not here" introduces a new inaccuracy. I'll revise to keep only the verifiably-absent items (labels/golden-features), preserving voice. Verdict: **revise**.

Fix #2 ? revise. The corrected_text "the golden corpus + labelled videos live on the owner's machine" is imprecise: this IS the owner's machine. The accurate distinction is that the labelled golden data hasn't been GPU-extracted into the shared folder yet (features dir empty), and the heavier confirmation is owner-driven. I'll tighten to a claim I can fully stand behind: the GPU/torch/cv2 claim is removed (the real fix), and the owner-side framing kept minimal and accurate without overclaiming about machine location. Verdict: **revise**.

Let me check the regression test referenced and confirm Gate A wiring framing isn't affected ? actually that's out of scope; both fixes are purely about environment-capability. I have enough to finalize.

Structured output provided successfully

16. assistant (2026-06-19T15:53:59.290Z)

Both proposed fixes survive, but I revised the corrected_text on each because the verification surfaced a second-order inaccuracy in the proposals.

Summary of verification:

Core staleness ? confirmed for both (file: `docs/NEXT_STEPS.md`):
- Line 18: "the dev box is CPU-only: `torch+cpu`/`cv2` present but no GPU"
- Line 69: "Dev container no GPU/torch/cv2"

Both are false. On this machine (host `AVIS-MSI`, the owner's own "2070S" box the doc itself references at line 93): `torch 2.6.0+cu124` with `torch.cuda.is_available() == True`, `cv2 4.13.0`, and `nvidia-smi` reports an RTX 2070 Super with Max-Q. Both stale_text strings appear verbatim and uniquely.

Why I revised (not confirmed) the proposed corrected_text:
The proposals also re-asserted that the data is "not here" / "lives on the owner's machine." Verifying that clause showed it is partly wrong in the opposite direction:
- Videos ARE present: e.g. `C:\Users\avidu\Projects\Annotation Setup\Collect\Candidates\*.MP4`
- Trajectory CSVs ARE present: `C:\Users\avidu\Projects\Annotation Setup\Collect\Trajectories\*_traj.csv`

- `output\human_lovo_manifest.json` exists locally
- This checkout IS the owner's machine, so "owner-side (GPU/WSL machine)" / "owner's machine" framing is imprecise.

What is genuinely absent: the `Golden Labelled\` directory (the `.rallies.csv` labels ? directory does not exist) and `...\OneDrive\rally-annotator\golden-data\features\` (empty). I retargeted both corrected_texts at those verifiably-missing artifacts so the edit fixes the GPU claim without introducing a new false "videos/CSVs not here" claim.

Output delivered via StructuredOutput (2 survivors, both verdict `revise`).
