Adversarial Claim Verifier (voter 1/3)

Be SKEPTICAL. Try to REFUTE this claim. ?2/3 refutations kill it.

Research question

Find promising AND reliable open-source tools/libraries for parsing Indian bank statement PDFs ? especially HDFC Bank savings/transaction statements ? into structured transaction rows (date, narration, ref, value date, withdrawal, deposit, closing balance), for reuse in a LOCAL-FIRST Python personal-finance tool ("muneem").

HARD CONSTRAINTS (a tool that violates these is unusable for us):

1. Must run 100% LOCALLY. Bank statements are highly sensitive ? NO cloud APIs, NO paid SaaS (e.g. bankstatementconverter.com, docparser, LLM extraction APIs). Paid/cloud is not acceptable even as a default.
2. Must be usable from Python.
3. License MUST be permissive & commercially safe: MIT, BSD, Apache-2.0, ISC, HPND. AVOID and explicitly FLAG anything GPL/LGPL/AGPL or that depends on copyleft native components ? in particular Camelot/tabula's reliance on Ghostscript (AGPL) or a Java runtime. PyMuPDF (AGPL) is already banned for us.

Specifically evaluate and compare these table-extraction approaches, for each giving: license (AND license of native deps), maintenance status (latest release + activity as of 2025/2026), reliability on SEMI-RULED / partially-borderless tables (HDFC's transaction table is not fully line-ruled), and password-protected-PDF support:

- pdfplumber (we already use it; MIT)
- Camelot ? camelot-py vs the maintained "pypdf_table_extraction" fork; its Ghostscript/OpenCV deps
- tabula-py (tabula-java + JVM)
- pypdfium2-based table extraction
- any other notable local options

Also assess the user's idea: "convert the PDF table to Excel/CSV first, then parse" ? is an intermediate CSV/Excel extraction more reliable than direct coordinate/text parsing, and which LOCAL+permissive tools do PDF?CSV/Excel table conversion well?

Finally, search for any existing, maintained, permissively-licensed open-source projects specifically for parsing Indian bank statements (HDFC/ICICI/SBI/Axis) or bank statements generally, that we could reuse or learn from (GitHub/PyPI).

Deliver a ranked shortlist of the most promising + reliable + license-safe options for HDFC statement parsing in a local Python tool, each with its license (and native-dep licenses), maintenance status, strengths/weaknesses for this use case, and a concrete recommendation for muneem (reuse library X vs. hand-roll coordinate clustering with pdfplumber). Cite sources.

Claim under review

"The project uses pdfplumber (pinned to pdfplumber==0.5.28) as its sole PDF table/text extraction engine ? the same MIT-licensed library muneem already uses ? with no camelot, tabula, PyMuPDF/fitz, or pikepdf dependency."

****Source:**** <https://github.com/xaneem/hdfc-credit-card-statement-parser> (primary)

****Supporting quote:**** "import pdfplumber
import csv, os, argparse"

Checklist

1. Is the claim actually supported by the quote, or is it an overreach/misread?
2. WebSearch for contradicting evidence ? does any credible source dispute or heavily qualify this?
3. Is the source quality sufficient for the claim's strength? (extraordinary claims need primary sources)
4. Is the claim outdated? (check dates ? old claims about fast-moving fields are suspect)
5. Is this a marketing claim / press release / cherry-picked benchmark / forum speculation?

****refuted=true**** if: unsupported by quote / contradicted / low-quality source for strong claim / outdated / marketing fluff.

****refuted=false**** ONLY if: claim is well-supported, current, and source quality matches claim strength.

Default to refuted=true if uncertain.

Structured output only. Evidence MUST be specific.

2. assistant (2026-05-30T19:17:58.867Z)

I'll verify this claim about the hdfc-credit-card-statement-parser project. Let me load the web tools and check the primary source.

3. assistant (2026-05-30T19:18:03.104Z)

The claim makes several specific assertions about the xaneem/hdfc-credit-card-statement-parser repo:

1. Uses pdfplumber as sole PDF extraction engine
2. ****Pinned to pdfplumber==0.5.28****
3. No camelot, tabula, PyMuPDF/fitz, or pikepdf dependency

Let me verify these against the primary source. The most critical and falsifiable claim is the exact version pin (0.5.28). Let me fetch the repo and its requirements file.

4. user (2026-05-30T19:18:07.863Z)

Dependencies List

The specified dependencies and their pinned versions are:

1. chardet==4.0.0
2. pdfminer.six==20200517
3. pdfplumber==0.5.28
4. Pillow==8.3.2
5. pycryptodome==3.10.4
6. sortedcontainers==2.4.0
7. Wand==0.6.7

pdfplumber Version

"pdfplumber==0.5.28" is the specified version for the pdfplumber package.

5. user (2026-05-30T19:18:09.835Z)

Based on the web page content provided, I cannot determine which specific PDF parsing libraries this project uses or what versions are pinned.

While the page mentions a `requirements.txt` file exists, the actual contents of that file are not displayed in the provided content. The page shows the repository structure and README, but does not include the dependency specifications needed to answer your question about pdfplumber, camelot, tabula, PyMuPDF, or pikepdf usage.

To find this information, you would need to directly access the `requirements.txt` file in the repository.

6. assistant (2026-05-30T19:18:15.833Z)

The requirements.txt confirms pdfplumber==0.5.28. Now I need to scrutinize the broader claim. There are two things to check:

1. Is pdfplumber actually the **sole** PDF extraction engine? The requirements.txt shows **Wand==0.6.7** ? Wand is the Python binding for ImageMagick, often used for PDF rasterization/image handling. And **pycryptodome** is present (likely for password-protected PDF decryption). This complicates "sole PDF table/text extraction engine."
2. The claim says "no camelot, tabula, PyMuPDF/fitz, or pikepdf" ? none of those appear in requirements. That part holds.

But let me verify whether the actual code (main.py / source) imports anything beyond pdfplumber, and whether Wand is used for PDF parsing. The supporting quote only shows `import pdfplumber / import csv, os, argparse` ? which would support "sole engine" IF that's the complete import set. Let me check the actual source file.

7. user (2026-05-30T19:18:17.768Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

8. user (2026-05-30T19:18:23.469Z)

Web search results for query: "xaneem hdfc-credit-card-statement-parser github pdfplumber wand"

Links: [{"title": "GitHub - xaneem/hdfc-credit-card-statement-parser: Extracts information from an HDFC Bank Credit Card Statement (India)", "url": "https://github.com/xaneem/hdfc-credit-card-statement-parser"}, {"title": "hdfc-credit-card-statement-parser/README.md at main · xaneem/hdfc-credit-card-statement-parser", "url": "https://github.com/xaneem/hdfc-credit-card-statement-parser/blob/main/README.md"}, {"title": "hdfc-credit-card-statement-parser/example-output.csv at main · xaneem/hdfc-credit-card-statement-parser", "url": "https://github.com/xaneem/hdfc-credit-card-statement-parser/blob/main/example-output.csv"}, {"title": "GitHub - joeirimpan/hdfc-cc-parser-rs: Parse hdfc cc statements into csv (infinia 2025 september+) · GitHub", "url": "https://github.com/joeirimpan/hdfc-cc-parser-rs"}, {"title": "Building a PDF Parser for HDFC Bank Statements: From 165 Pages to CSV in Minutes - DEV Community", "url": "https://dev.to/vishwaraja_pathivishwa/building-a-pdf-parser-for-hdfc-bank-statements-from-165-pages-to-csv-in-minutes-34c6"}, {"title": "xaneem (Saneem) · GitHub", "url": "https://github.com/xaneem"}, {"title": "hdfc-cc-parser-rs/README.md at master · joeirimpan/hdfc-cc-parser-rs", "url": "https://github.com/joeirimpan/hdfc-cc-parser-rs/blob/master/README.md"}, {"title": "GitHub - santosh1994/hdfc-creditcard-statement-parser: HDFC Diners Statement PDF to cvs converter", "url": "https://github.com/santosh1994/hdfc-creditcard-statement-parser"}, {"title": "Convert HDFC Bank Credit Card statements from PDF to Excel · GitHub", "url": "https://gist.github.com/nikhilweee/24cae428f68c153afda495dc17ef43d6?permalink_comment_id=3697712"}, {"title": "hdfc-creditcard-statement-parser/index.html at master · santosh1994/hdfc-creditcard-statement-parser", "url": "https://github.com/santosh1994/hdfc-creditcard-statement-parser/blob/master/index.html"}]

Based on the search results, here's what I found:

xaneem hdfc-credit-card-statement-parser

The xaneem/hdfc-credit-card-statement-parser project extracts information from an HDFC Bank Credit Card statement and helps copy structured data out of your statement. It was built for personal use and does not guarantee accuracy.

****Key Features:****

- It extracts both Indian and Foreign transactions, and for Foreign transactions, the Forex Amount and Forex Rate is also extracted.
- Converts PDF statements to CSV format for easier data analysis

****Important Notes:****

- Users are advised to always cross-check extracted data with the PDF for mistakes
- The creator notes they may have missed testing for some types of transactions in the statement

You can find the project at: <https://github.com/xaneem/hdfc-credit-card-statement-parser>

The project uses Python for PDF processing, though the search results don't specifically detail the use of pdfplumber or wand libraries in the xaneem version. However, other similar HDFC statement parsers (like the one mentioned in the DEV article) do use pdfplumber for text extraction from PDF files.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

9. assistant (2026-05-30T19:18:28.017Z)

The default branch is `main`, not `master`. My requirements.txt fetch (which succeeded) used `master` ? GitHub serves both for the default branch via redirect on raw, so that content is valid, but let me confirm the import block directly from the source file on the `main` branch to verify the "sole engine" part of the claim. The key question: does the code actually import Wand or pycryptodome (both in requirements), which would undercut "sole PDF table/text extraction engine"?

10. user (2026-05-30T19:18:29.688Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

11. user (2026-05-30T19:18:32.455Z)

Requirements File Contents

Here are the dependencies listed in the requirements.txt file:

1. chardet==4.0.0
2. pdfminer.six==20200517
3. pdfplumber==0.5.28
4. Pillow==8.3.2
5. pycryptodome==3.10.4
6. sortedcontainers==2.4.0
7. Wand==0.6.7

These packages support PDF processing, character encoding detection, image manipulation, and cryptographic functionality for the HDFC credit card statement parser project.

12. assistant (2026-05-30T19:18:35.875Z)

The raw main.py on `main` returns 404 (the file may be named differently, or the repo's main script has another name). The requirements.txt is consistently confirmed on both branch refs.

Let me find the actual Python source filename via the GitHub API to inspect imports, since "sole engine" depends on what the code actually uses.

```

14. assistant (2026-05-30T19:18:42.351Z)

Now I have the key facts. The main script is `plumber.py` (not main.py). License is confirmed MIT. Let me fetch the actual imports from plumber.py to settle the "sole engine" question ? specifically whether Wand and pycryptodome (both in requirements.txt) are actually imported/used.

15. user (2026-05-30T19:18:46.429Z)

Import Statements

The file contains these import statements verbatim:

```
```python
import pdfplumber
import csv, os, argparse
```
```

PDF Library Usage

The code imports `pdfplumber` only. It does not import `camelot`, `tabula`, `fitz/PyMuPDF`, `pikepdf`, `wand`, or `pycryptodome/Crypto`.

Password Handling

Password-protected PDF decryption is managed through `pdfplumber`'s built-in functionality. The password parameter is passed directly to `pdfplumber.open()`:

```
```python
pdf = pdfplumber.open(input, password=password)
```
```

`pdfplumber` handles the decryption internally without requiring additional cryptographic libraries. The password comes from command-line arguments with a default value of `None`.

16. assistant (2026-05-30T19:19:01.645Z)

I now have all the facts needed. Let me assess the claim against each component.

****Verified facts:****

- Repo: `xaneem/hdfc-credit-card-statement-parser`, License = MIT (confirmed via API: `"spx_id": "MIT"`)
- `requirements.txt` contains `pdfplumber==0.5.28` (confirmed twice via `WebFetch`) ? version pin

****accurate****

- No `camelot`, `tabula`, `PyMuPDF/fitz`, or `pikepdf` in `requirements.txt` or imports ?
- The source file `plumber.py` imports only `pdfplumber` (plus `stdlib csv, os, argparse`) ? confirms `pdfplumber` as the only PDF extraction engine actually invoked in code
- Password handling is via `pdfplumber.open(input, password=password)` ? `pdfplumber` itself (which delegates to `pdfminer.six`)

****Scrutinizing for refutation:****

1. ***Quote support*:** The supporting quote (`import pdfplumber / import csv, os, argparse`) is the literal, complete import block of `plumber.py` ? verified verbatim. The quote genuinely supports "pdfplumber as sole PDF table/text extraction engine."

2. ***The "no pycryptodome/Wand" angle*:** `requirements.txt` DOES list `pycryptodome==3.10.4` and `Wand==0.6.7`. But the claim never asserts the absence of those ? it specifically names "camelot, tabula, PyMuPDF/fitz, or pikepdf," all of which are genuinely absent. `Wand/pycryptodome` are not PDF *table/text extraction* engines (`Wand=ImageMagick image binding; pycryptodome=crypto`), and they aren't even imported by the code. So their presence in `requirements.txt` does not contradict "pdfplumber as sole table/text extraction engine." This is the strongest potential refutation and it fails.

3. ***Source quality*:** Primary source (the repo itself), inspected directly via GitHub API and raw file fetches. Highest possible quality for this claim.

4. ***Outdated?***: Repo last pushed 2022-08-11. `pdfplumber==0.5.28` is old, and `pdfplumber 0.5.x` relied on `Wand+ImageMagick` for image conversion (explains `Wand` in `requirements`). The claim is a factual description of the repo's current pinned state, which remains accurate. The claim doesn't assert the pin is current best-practice, only that it exists ? true.

5. ***Marketing/speculation?***: No. Direct code inspection.

The claim is accurate on every assertion it actually makes. The only nuance worth flagging: the repo IS pinned to a very old `pdfplumber` (0.5.28, from ~2021) and ships `pycryptodome` + `Wand` in `requirements.txt` ? so "sole PDF extraction engine" is true for *table/text extraction*, but

the dependency footprint isn't pdfplumber-only. That's a qualification, not a contradiction. The claim as worded (carefully scoped to "table/text extraction engine" and to the four named libraries) holds.

Verdict: ****not refuted****.

17. user (2026-05-30T19:19:10.659Z)

Structured output provided successfully

18. assistant (2026-05-30T19:19:17.806Z)

Verdict: ****not refuted**** (confidence: high).

The claim is accurate on every assertion it actually makes, verified against the primary source:

- ****MIT license**** ? confirmed via GitHub API (``spdx_id: MIT``).
- ****pdfplumber==0.5.28 pin**** ? confirmed in requirements.txt (fetched twice, consistent).
- ****No camelot/tabula/PyMuPDF-fitz/pikepdf**** ? none in requirements.txt or source; all four genuinely absent.
- ****pdfplumber as sole extraction engine**** ? the actual main script is ``plumber.py`` (not ``main.py``), whose complete import block is verbatim ``import pdfplumber` / `import csv, os, argparse``, matching the supporting quote exactly.

The strongest refutation attempt fails: requirements.txt *does* also list ``pycryptodome==3.10.4`` and ``Wand==0.6.7``, but (a) the claim never asserts their absence ? it names only the four parsers, and (b) these are a crypto lib and an ImageMagick binding, not table/text extraction engines, and neither is imported by ``plumber.py``. So their presence doesn't contradict the scoped claim.

One qualifier worth carrying forward (not a contradiction): the repo was last pushed ****2022-08-11**** and pins a very stale pdfplumber 0.5.x ? far behind current 0.11.x. For muneem this is a learn-from reference, not a dependency to vendor as-is.
