Adversarial Claim Verifier (voter 2/3)

Be SKEPTICAL. Try to REFUTE this claim. ?2/3 refutations kill it.

Research question

Find promising AND reliable open-source tools/libraries for parsing Indian bank statement PDFs ? especially HDFC Bank savings/transaction statements ? into structured transaction rows (date, narration, ref, value date, withdrawal, deposit, closing balance), for reuse in a LOCAL-FIRST Python personal-finance tool ("muneem").

HARD CONSTRAINTS (a tool that violates these is unusable for us):

1. Must run 100% LOCALLY. Bank statements are highly sensitive ? NO cloud APIs, NO paid SaaS (e.g. bankstatementconverter.com, docparser, LLM extraction APIs). Paid/cloud is not acceptable even as a default.
2. Must be usable from Python.
3. License MUST be permissive & commercially safe: MIT, BSD, Apache-2.0, ISC, HPND. AVOID and explicitly FLAG anything GPL/LGPL/AGPL or that depends on copyleft native components ? in particular Camelot/tabula's reliance on Ghostscript (AGPL) or a Java runtime. PyMuPDF (AGPL) is already banned for us.

Specifically evaluate and compare these table-extraction approaches, for each giving: license (AND license of native deps), maintenance status (latest release + activity as of 2025/2026), reliability on SEMI-RULED / partially-borderless tables (HDFC's transaction table is not fully line-ruled), and password-protected-PDF support:

- pdfplumber (we already use it; MIT)
- Camelot ? camelot-py vs the maintained "pypdf_table_extraction" fork; its Ghostscript/OpenCV deps
- tabula-py (tabula-java + JVM)
- pypdfium2-based table extraction
- any other notable local options

Also assess the user's idea: "convert the PDF table to Excel/CSV first, then parse" ? is an intermediate CSV/Excel extraction more reliable than direct coordinate/text parsing, and which LOCAL+permissive tools do PDF?CSV/Excel table conversion well?

Finally, search for any existing, maintained, permissively-licensed open-source projects specifically for parsing Indian bank statements (HDFC/ICICI/SBI/Axis) or bank statements generally, that we could reuse or learn from (GitHub/PyPI).

Deliver a ranked shortlist of the most promising + reliable + license-safe options for HDFC statement parsing in a local Python tool, each with its license (and native-dep licenses), maintenance status, strengths/weaknesses for this use case, and a concrete recommendation for muneem (reuse library X vs. hand-roll coordinate clustering with pdfplumber). Cite sources.

Claim under review

"The py-pdf maintainers agreed to revive the unmaintained Camelot table-extraction library as a fork hosted under the py-pdf organization, named 'pypdf_table_extraction'. This identifies the maintained fork referenced in muneem's research question."

****Source:**** <https://github.com/py-pdf/pypdf/discussions/2466> (primary)

****Supporting quote:**** "MartinThoma proposed: "pypdf_table_extraction" ... bosd agreed: "Makes sense ?" ... The discussion concluded with consensus to fork Camelot under the py-pdf organization with the name `pypdf\_table\_extraction`, with bosd expressed as interested in becoming a maintainer."

Checklist

1. Is the claim actually supported by the quote, or is it an overreach/misread?
2. WebSearch for contradicting evidence ? does any credible source dispute or heavily qualify this?
3. Is the source quality sufficient for the claim's strength? (extraordinary claims need primary sources)
4. Is the claim outdated? (check dates ? old claims about fast-moving fields are suspect)
5. Is this a marketing claim / press release / cherry-picked benchmark / forum speculation?

****refuted=true**** if: unsupported by quote / contradicted / low-quality source for strong claim / outdated / marketing fluff.

****refuted=false**** ONLY if: claim is well-supported, current, and source quality matches claim strength.

Default to refuted=true if uncertain.

Structured output only. Evidence MUST be specific.

2. assistant (2026-05-30T19:14:19.974Z)

I'll verify this claim about the py-pdf maintainers reviving Camelot as "pypdf_table_extraction". Let me start by loading the web tools and examining the primary source.

3. assistant (2026-05-30T19:14:22.904Z)

Let me fetch the primary source and search for corroborating/contradicting evidence in parallel.

4. user (2026-05-30T19:14:28.981Z)

Discussion Summary: Camelot Fork Under py-pdf

Naming Proposal

MartinThoma suggested: "I suggest `pypdf\_table\_extraction`" as the name for the forked repository.

Bosd responded affirmatively: "Makes sense ?"

Decision on Forking

There was agreement to proceed with forking Camelot into the py-pdf organization. MartinThoma outlined the plan: "forking Camelot into the py-pdf organization and renaming it to `pypdf-table-extraction` would make sense."

The proposal included keeping the integration with pypdf.PdfReader as optional initially, allowing users to transition existing code by switching imports.

Maintainer Interest

Bosd expressed willingness to participate but acknowledged limitations: "Hopefully some more experienced dev's are interested in becoming maintainer as well." This suggests bosd would contribute but sought additional experienced developers to share maintenance responsibilities.

The conversation focused on keeping table extraction as an optional feature rather than a

mandatory dependency for pypdf users.

Web search results for query: "pypdf_table_extraction camelot fork py-pdf maintained"

Links: [{"title": "Integration of Camelot in py-pdf · py-pdf/pypdf · Discussion #2466", "url": "https://github.com/py-pdf/pypdf/discussions/2466"}, {"title": "Introduction ? pypdf_table_extraction 1.0.2 documentation", "url": "https://pypdf-table-extraction.readthedocs.io/en/latest/user/intro.html"}, {"title": "GitHub - py-pdf/pypdf_table_extraction: A Python library to extract tabular data from PDFs · GitHub", "url": "https://github.com/py-pdf/pypdf_table_extraction"}, {"title": "pypdf-table-extraction · PyPI", "url": "https://pypi.org/project/pypdf-table-extraction/"}, {"title": "5 Python open-source tools to extract text and tabular data from PDF Files | Towards Data Science", "url": "https://towardsdatascience.com/5-python-open-source-tools-to-extract-text-and-tabular-data-from-pdf-files-9359cdde6b56/"}, {"title": "How to Extract Tables from PDF Using Python | A 2026 Guide", "url": "https://unstract.com/blog/extract-tables-from-pdf-python/"}, {"title": "Releases · py-pdf/pypdf_table_extraction", "url": "https://github.com/py-pdf/pypdf_table_extraction/releases"}, {"title": "How to Extract Tables from PDF in Python - The Python Code", "url": "https://thepythoncode.com/article/extract-pdf-tables-in-python-camelot"}]

Here are the search results for your query about `pypdf\_table\_extraction`, `camelot`, `fork`, and `py-pdf`:

Key Findings:

****Project Status:****

pypdf_table_extraction is the community maintained fork of Camelot. It was forked from camelot-dev/camelot and is hosted under the py-pdf organization on GitHub.

****Development Context:****

The py-pdf organization decided on forking Camelot into the py-pdf organization and renaming it to pypdf-table-extraction. This was discussed as a solution because Camelot is dead, but the camelot community is not, and people are using it with bosd wanting to maintain it.

****Deprecation Notice:****

Interestingly, the PyPI package page is marked as DEPRECATED and recommends using camelot-py instead. Additionally, Camelot-py is now described as the actively maintained successor to this library.

****Features:****

pypdf_table_extraction (formerly known as Camelot) is a Python library that can help you extract tables from PDFs and works with text-based PDFs.

The search results suggest that while pypdf_table_extraction was created as a community-maintained fork of the original Camelot project, the landscape has since evolved with the emergence of camelot-py as the newer actively maintained successor.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

6. assistant (2026-05-30T19:14:36.260Z)

The primary source confirms the core of the claim, but the search surfaced an important wrinkle: the PyPI page for pypdf-table-extraction now appears to be marked DEPRECATED, recommending camelot-py instead. Let me verify both the GitHub repo's existence and the deprecation status directly.

7. user (2026-05-30T19:14:41.288Z)

I cannot provide the requested information about the PyPI package status, deprecation status, version details, or license based on the content provided.

The webpage content shows only an error message stating that "A required part of this site couldn't load." This appears to be a connection or loading issue rather than actual package information. The page does not contain any data about the package's current status, deprecation notices, version history, release dates, or licensing terms.

To obtain this information, you would need to access a working version of the PyPI package page directly.

8. user (2026-05-30T19:14:41.443Z)

pypdf_table_extraction Repository Status

****Fork Status:**** Yes, this repository is "forked from [camelot-dev/camelot](https://github.com/camelot-dev/camelot)" according to the GitHub interface.

****Current Status:**** The project is archived and deprecated. The repository displays a notice stating: "This repository was archived by the owner on Apr 11, 2025. It is now read-only."

****Deprecation Notice:**** The README contains an explicit deprecation message recommending users migrate: "This project is deprecated and no longer actively maintained. Please use [camelot-py](https://github.com/camelot-dev/camelot) instead."

****Latest Release:**** Version 1.0.2, released on April 2, 2025.

****Maintenance:**** The project is no longer actively maintained. The README explicitly directs users to the actively maintained successor, camelot-py, which "provides robust PDF table extraction capabilities."

The archival occurred shortly after the final release, indicating a formal end-of-life for this iteration of the library.

9. assistant (2026-05-30T19:14:44.293Z)

This significantly changes the picture. The GitHub repository was ****archived on April 11, 2025**** and the README explicitly says the project is deprecated, directing users to ****camelot-py**** instead. Let me confirm the deprecation/archival from an independent angle, since this directly affects whether the claim correctly "identifies the maintained fork."

10. user (2026-05-30T19:14:50.767Z)

Analysis of pypdf_table_extraction Status

Based on the documentation provided:

****Fork Status:**** Yes, the documentation explicitly states that "pypdf_table_extraction is the community maintained fork of Camelot."

****Deprecation or Migration Notice:**** No, there is no mention that pypdf_table_extraction is deprecated or that users should switch to camelot-py instead.

****Maintenance Status:**** The documentation indicates it is "community maintained," though it doesn't provide detailed information about active development levels or timelines. The presence of version 1.0.2 documentation and the copyright line "Copyright (c) 2024 pypdf_table_extraction Developers" suggests recent maintenance activity, but the page doesn't explicitly characterize the project's current development status beyond noting it is community-supported rather than commercially maintained.

The documentation presents pypdf_table_extraction as an actively available alternative that offers "complete control over table extraction" with customizable settings, positioning it as a distinct tool rather than a deprecated project.

11. user (2026-05-30T19:14:51.024Z)

Web search results for query: "pypdf_table_extraction deprecated archived "camelot-py" actively maintained successor"

Links: [{"title": "GitHub - py-pdf/pypdf_table_extraction: A Python library to extract tabular data from PDFs · GitHub", "url": "https://github.com/py-pdf/pypdf_table_extraction"}, {"title": "pypdf-table-extraction · PyPI", "url": "https://pypi.org/project/pypdf-table-extraction/"}, {"title": "Releases · py-pdf/pypdf_table_extraction", "url": "https://github.com/py-pdf/pypdf_table_extraction/releases"}, {"title": "How to Extract Tables from PDF Using Python | A 2026 Guide", "url": "https://unstruct.com/blog/extract-tables-from-pdf-python/"}, {"title": "Cannot import pypdf_table_extraction package · Issue #286 · py-pdf/pypdf_table_extraction", "url": "https://github.com/py-pdf/pypdf_table_extraction/issues/286"}, {"title": "Comparing 6 Frameworks for Rule-based PDF parsing", "url": "https://www.ai-bites.net/comparing-6-frameworks-for-rule-based-pdf-parsing/"}, {"title": "Camelot: PDF Table Extraction for Humans ? Camelot 2.0.0rc1 documentation", "url": "https://camelot-py.readthedocs.io/"}]

Based on the search results, here are the key findings about pypdf_table_extraction and camelot-py:

Status of pypdf_table_extraction

pypdf_table_extraction is deprecated and no longer actively maintained. The repository was archived on April 11, 2025.

camelot-py as the Successor

Users are directed to use camelot-py instead, which is the actively maintained successor to this library and provides robust PDF table extraction capabilities. This recommendation is also reflected on the PyPI package page where it states "DEPRECATED - Please use camelot-py instead."

Historical Context

Interestingly, pypdf_table_extraction was formerly known as Camelot, meaning the project was renamed from Camelot to pypdf_table_extraction at some point before being deprecated. The current actively maintained version is now back under the camelot-py name.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

12. assistant (2026-05-30T19:15:03.312Z)

I now have enough corroborated evidence from multiple independent sources to render a verdict.

Let me assess the claim against the checklist:

The claim states: "The py-pdf maintainers agreed to revive the unmaintained Camelot table-extraction library as a fork hosted under the py-pdf organization, named 'pypdf_table_extraction'. This identifies the maintained fork referenced in muneem's research question."

Findings:

1. **First sentence is well-supported.** Discussion #2466 confirms MartinThoma proposed the name 'pypdf_table_extraction' and bosd agreed ("Makes sense"), with consensus to fork Camelot under py-pdf. The repo at github.com/py-pdf/pypdf_table_extraction exists and is "forked from camelot-dev/camelot." The quoted supporting text checks out (minor nuance: bosd said "Hopefully some more experienced devs are interested in becoming maintainer as well" ? he expressed interest but wasn't a sole confirmed maintainer, a small overstatement but not material).

2. **Second sentence is REFUTED by current evidence.** The claim asserts this "identifies the maintained fork." It does not ? it identifies a fork that is now **archived and deprecated**:

- GitHub repo: "This repository was archived by the owner on Apr 11, 2025. It is now read-only."
- README: "This project is deprecated and no longer actively maintained. Please use camelot-py instead."
- PyPI: "DEPRECATED - Please use camelot-py instead."
- Latest/final release: v1.0.2 on April 2, 2025.
- The actively-maintained successor is now **camelot-py** (camelot-dev/camelot), which is at 2.0.0rc1 ? i.e., the maintenance effort migrated **back** to the camelot-py name.

The research question explicitly asks for "the maintained 'pypdf_table_extraction' fork." pypdf_table_extraction is **no longer the maintained fork** as of 2025/2026 ? it is archived, and maintenance moved to camelot-py. The claim's load-bearing assertion (that this fork is the maintained one to use) is outdated and contradicted by the project's own primary sources. This is exactly the kind of outdated-claim-about-a-fast-moving-field that should be flagged.

Two independent failure modes confirmed: (a) the claim's second sentence is contradicted by primary sources (GitHub archive notice, PyPI deprecation), and (b) it is outdated for the research question's 2025/2026 timeframe.

13. user (2026-05-30T19:15:11.097Z)

Structured output provided successfully

14. assistant (2026-05-30T19:15:16.310Z)

Verdict: **refuted=true** (high confidence).

The claim is half-right but its load-bearing assertion is outdated. The fork was indeed created under py-pdf as `pypdf\_table\_extraction` (Discussion #2466 confirms the naming and consensus). But the claim's second sentence ? that this "identifies the maintained fork" ? is contradicted by the project's own primary sources: the GitHub repo was archived April 11, 2025, the README says "deprecated and no longer actively maintained. Please use camelot-py instead," and PyPI shows "DEPRECATED." Maintenance migrated back to camelot-py (now 2.0.0rc1). So for muneem's 2025/2026 research question, pypdf_table_extraction is the wrong answer to "the maintained fork."
