Source Extractor

Research question: "Find promising AND reliable open-source tools/libraries for parsing Indian bank statement PDFs ? especially HDFC Bank savings/transaction statements ? into structured transaction rows (date, narration, ref, value date, withdrawal, deposit, closing balance), for reuse in a LOCAL-FIRST Python personal-finance tool ("muneem").

HARD CONSTRAINTS (a tool that violates these is unusable for us):

1. Must run 100% LOCALLY. Bank statements are highly sensitive ? NO cloud APIs, NO paid SaaS (e.g. bankstatementconverter.com, docparser, LLM extraction APIs). Paid/cloud is not acceptable even as a default.
2. Must be usable from Python.
3. License MUST be permissive & commercially safe: MIT, BSD, Apache-2.0, ISC, HPND. AVOID and explicitly FLAG anything GPL/LGPL/AGPL or that depends on copyleft native components ? in particular Camelot/tabula's reliance on Ghostscript (AGPL) or a Java runtime. PyMuPDF (AGPL) is already banned for us.

Specifically evaluate and compare these table-extraction approaches, for each giving: license (AND license of native deps), maintenance status (latest release + activity as of 2025/2026), reliability on SEMI-RULED / partially-borderless tables (HDFC's transaction table is not fully line-ruled), and password-protected-PDF support:

- pdfplumber (we already use it; MIT)
- Camelot ? camelot-py vs the maintained "pypdf_table_extraction" fork; its Ghostscript/OpenCV deps
- tabula-py (tabula-java + JVM)
- pypdfium2-based table extraction
- any other notable local options

Also assess the user's idea: "convert the PDF table to Excel/CSV first, then parse" ? is an intermediate CSV/Excel extraction more reliable than direct coordinate/text parsing, and which LOCAL+permissive tools do PDF?CSV/Excel table conversion well?

Finally, search for any existing, maintained, permissively-licensed open-source projects specifically for parsing Indian bank statements (HDFC/ICICI/SBI/Axis) or bank statements generally, that we could reuse or learn from (GitHub/PyPI).

Deliver a ranked shortlist of the most promising + reliable + license-safe options for HDFC statement parsing in a local Python tool, each with its license (and native-dep licenses), maintenance status, strengths/weaknesses for this use case, and a concrete recommendation for muneem (reuse library X vs. hand-roll coordinate clustering with pdfplumber). Cite sources."

Fetch and extract key claims from this source:

```
**URL:** https://pypi.org/project/camelot-py/  
**Title:** camelot-py · PyPI  
**Found via:** license/dependency risk ? copyleft native deps search
```

Task

1. Use WebFetch to retrieve the page content.
2. Assess source quality: primary research/institution? secondary reporting? blog/opinion? forum? unreliable?
3. Extract 2-5 FALSIFIABLE claims that bear on the research question. Each claim must:
 - be a concrete, checkable statement (not vague generalities)
 - include a direct quote from the source as support
 - be rated central/supporting/tangential to the research question
4. Note publish date if available.

If the fetch fails or the page is irrelevant/paywalled, return claims: [] and sourceQuality: "unreliable".

Structured output only.

2. assistant (2026-05-30T19:11:55.134Z)

I'll fetch the Camelot PyPI page and extract key claims relevant to the research question.

3. user (2026-05-30T19:12:06.538Z)

Camelot-py Evaluation Summary

1. License

MIT License - "License Expression: MIT"

2. Dependencies

System/native dependencies stated:

- **Ghostscript**: "After installing the dependencies (tk and ghostscript), you can also just use pip"
- **Tkinter (tk)**: Same quote as above
- **Python requirement**: "Requires: Python >=3.8"

3. Latest Release

- **Version**: 1.0.9
- **Release date**: "Aug 10, 2025"
- **Previous stable**: 1.0.0 (Dec 30, 2024)

4. Maintenance Status

Active maintenance indicators:

- Recent release (Aug 10, 2025)
- Three maintainers listed (bosd, Martin.Thoma, vinayakmehta)
- Development Status classifier: "5 - Production/Stable"
- No fork notices mentioned; appears to be original project

5. Library Functionality

Core capability: "Camelot is a Python library that can help you extract tables from PDFs."

Supported output formats: "You can also export tables to multiple formats, which include CSV, JSON, Excel, HTML, Markdown, and Sqlite."

Table extraction modes mentioned: "Configurability: Camelot gives you control over the table extraction process"

Note: Library limitation stated? "Camelot only works with text-based PDFs and not scanned documents."

6. Password-Protected PDF Support

No mention found in the provided documentation.

4. assistant (2026-05-30T19:12:09.404Z)

The fetch succeeded. Let me get a bit more detail on the version history and any fork-related notices, since the maintainership picture (bosd as maintainer) is relevant to the pypdf_table_extraction fork question.

5. user (2026-05-30T19:12:16.277Z)

Analysis of camelot-py PyPI Page

Key Findings

(1) No mention of "pypdf_table_extraction" or unmaintained status:

The page contains no references to a project rename, fork history, or maintenance issues. The project is listed with development status "5 - Production/Stable."

(2) Dependencies and Installation:

The installation section specifies: "After installing the dependencies (tk and ghostscript), you can also just use pip to install Camelot: `pip install "camelot-py[base]"`"

The page lists optional extras including `ghostscript` but does not explicitly mention OpenCV (cv2) in the visible installation instructions shown here.

(3) Release History (versions 1.0.0 through 1.0.9):

- 1.0.9 - Aug 10, 2025 (current)
- 1.0.0 - Dec 30, 2024
- 0.11.0 - Feb 26, 2023

The release history shows 1.0.9 and 1.0.0, but the page does not display intermediate versions (1.0.1-1.0.8) in the visible history section.

(4) GitHub Repository URLs:

- Homepage: <https://github.com/camelot-dev/camelot>
- Repository: <https://github.com/camelot-dev/camelot>
- Changelog: <https://github.com/camelot-dev/camelot/releases>

6. assistant (2026-05-30T19:12:20.839Z)

I have enough to extract claims. Let me synthesize.

The PyPI page for camelot-py confirms: MIT license, but requires Ghostscript and tk as system dependencies. The Ghostscript dependency is the critical license-risk finding for muneem's research question (Ghostscript is AGPL). The page is the official, authoritative source for the package metadata ? primary source quality. No password-protection support is mentioned, and the library only works on text-based PDFs (not scanned), which is relevant for HDFC statements.

7. user (2026-05-30T19:12:26.805Z)

Structured output provided successfully

8. assistant (2026-05-30T19:12:32.843Z)

Extracted 5 claims from the camelot-py PyPI page (primary source ? the official package metadata).

Key findings for the muneem research question:

- License is MIT (passes the permissive-license bar), but the package depends on Ghostscript as a system dependency ? Ghostscript is AGPL, which is the exact copyleft native-dep risk the research question flags. This is the central, disqualifying-level finding.
- Actively maintained (v1.0.9, Aug 10 2025; "Production/Stable").
- Text-based PDFs only ? no scanned-document support, and no mention of password-protected PDF support.
- Can export tables to CSV/Excel directly, relevant to the user's "PDF?CSV/Excel first" idea.

Note: the PyPI page does not mention the `pypdf\_table\_extraction` fork or any rename; however,

the listed maintainer `bosd` and the `camelot-dev/camelot` repo are the same lineage as that maintained fork ? but that connection is not stated on this page, so I did not assert it as a claim from this source.
