Transcript

1. user (2026-06-21T19:32:10.688Z)

You are reviewing the CI wiring + dependency change. Read under

C:/Users/avidu/Projects/khelsutra-cov:

```
- .github/workflows/test.yml (full file)
- web/package.json (scripts + devDependencies)
- confirm web/package-lock.json contains @vitest/coverage-v8 (so `npm ci` installs it on CI ?
run: grep -c "@vitest/coverage-v8" web/package-lock.json)
```

Adversarially assess:

1. Does the web job now run `npm run test:coverage`, and does that script exist and map to `vitest run --coverage`?
 2. Will `npm ci` on a clean CI runner install the coverage provider (is it in BOTH package.json devDeps AND the lockfile)? A missing lockfile entry would break CI with ERESOLVE/missing-module.
 3. Node version compatibility: CI uses node 24; @vitest/coverage-v8 ^3 with vitest ^3 ? any known incompatibility?
 4. Does the site job remain unaffected? Any duplicate/leftover steps?
- Return structured findings.

2. assistant (2026-06-21T19:32:12.910Z)

I'll review the CI wiring and dependency changes. Let me start by reading the relevant files.

3. user (2026-06-21T19:32:13.867Z)

```
1      name: test
2      on:
3        push:
4          branches: [master]
5        pull_request:
6
7      jobs:
8        site:
9          runs-on: ubuntu-latest
10         defaults:
11           run:
12             working-directory: site
13         steps:
14           - uses: actions/checkout@v4
15           - uses: actions/setup-node@v4
16             with:
17               node-version: "24" # node:sqlite is unflagged; server.test.js boots the VM
host
18           cache: "npm"
19           cache-dependency-path: site/package-lock.json
20           # jsdom is a TEST-ONLY devDep (the behavioral landing-page UX tests run the real
inline
```

```

21      # script in a DOM); the Cloudflare Worker + VM-host RUNTIMES stay dependency-free.
`npm test`
22      # runs ALL paths: Worker+D1 logic (index.test.js), the booted VM host
(server.test.js), the
23      # static content contract (assets.test.js), and the UX behaviour (ux.dom.test.js).
24      - run: npm ci
25      - run: npm test
26      # Syntax-check the ops shell scripts (provision/teardown/smoke/parity) so a broken
27      # script can't ship to the runbook. `bash -n` parses without executing.
28      - name: shell scripts parse-check
29        run: for f in scripts/*.sh; do echo "checking $f"; bash -n "$f"; done
30
31      web:
32      # Operator-console SPA (web/): typecheck + unit tests (with a coverage floor) +
production build
33      # gate the merge. `test:coverage` fails if coverage drops below the thresholds in
vite.config.ts,
34      # so a merge can't silently regress test coverage.
35      runs-on: ubuntu-latest
36      defaults:
37        run:
38          working-directory: web
39      steps:
40      - uses: actions/checkout@v4
41      - uses: actions/setup-node@v4
42        with:
43          node-version: "24"
44          cache: "npm"
45          cache-dependency-path: web/package-lock.json
46      - run: npm ci
47      - run: npm run typecheck
48      - run: npm run test:coverage
49      - run: npm run build
50

2     import react from "@vitejs/plugin-react";
3     import tailwindcss from "@tailwindcss/vite";
4
5     // The SPA makes SAME-ORIGIN relative `/api/*` calls. In the appliance (prod) a reverse
6     // proxy serves the SPA and proxies `/api` to the engine on 127.0.0.1:8000
7     // (docs/LOCAL_APPLIANCE_ARCHITECTURE.md). In dev, Vite proxies `/api` to the local
engine
8     // (`python -m backend.main --server`, :8000). Override with VITE_ENGINE_ORIGIN if
needed.
9     export default defineConfig({
10       plugins: [react(), tailwindcss()],
11       server: {
12         proxy: {
13           "/api": { target: "http://localhost:8000", changeOrigin: true },
14         },
15       },
16       test: {
17         // Default env is node (the pure lib/parser tests); the i18n render test opts into
jsdom via a
18         // `@vitest-environment jsdom` docblock. Match .test.tsx too so render tests are
discovered.
19         environment: "node",
20         include: ["src/**/*.test.{ts,tsx}"],
21         // DOM-env localStorage polyfill (jsdom under Node 26 ships none); node-env files
no-op.
22         setupFiles: ["src/test/setup.ts"],
23         // Coverage floor (CI runs `npm run test:coverage`): a merge can't DROP coverage
below these
24         // thresholds, so untested new code is caught. `all` counts every source file (not
only the ones a
25         // test imported), so deleting a test surfaces here too. Excludes are non-logic
files: the app
26         // entry/bootstrap, type-only declarations, and the test harness itself.
27         coverage: {
28           provider: "v8",
29           reporter: ["text", "text-summary"],
30           all: true,
31           include: ["src/**/*.test.{ts,tsx}"],
32           exclude: [
33             "src/**/*.test.{ts,tsx}", // the tests
34             "src/test/**", // jsdom localStorage shim (test harness, not shipped logic)
35             "src/main.tsx", // app entry: mounts <App/> + bundles fonts ? nothing to unit-
test
36             "src/api/types.ts", // type-only declarations (no runtime code)
37             "**/*.d.ts",
38           ],
39         // Floor set just below current (stmts/lines 92.6, branches 87.7, funcs 82.4) ? a
real ratchet
40         // that fails CI on a meaningful drop, with a little slack so it doesn't flap.
Ratchet upward as
41         // coverage grows. (functions is kept looser: App.tsx is the engine-orchestrating
shell, costly

```

```

42      // to exercise fully in unit tests.)
43      thresholds: {
44          statements: 92,
45          branches: 87,
46          functions: 80,
47          lines: 92,
48      },
49  },
50  },
51  });
52

```

14. assistant (2026-06-21T19:32:34.345Z)

Both vitest and @vitest/coverage-v8 are pinned to exactly 3.2.6 in the lockfile, satisfying the strict peer dependency. Let me verify the lockfile is internally consistent (the root package references) and check the Node engine constraint for vitest to assess the Node 24 question.

15. user (2026-06-21T19:32:38.786Z)

```

=== root deps reference coverage-v8 (lockfile packages.'') ===

```

```

28:     "@vitest/coverage-v8": "^3.2.6",
29:     "jsdom": "^29.1.1",
30:     "tailwindcss": "^4.0.0",

```

```

=== vitest engines in lock ===

```

```

35:     "engines": {
36:         "node": "^18.0.0 || ^20.0.0 || >=22.0.0"
37:     },
38:     "funding": {
--
79:     "engines": {
80:         "node": ">=0.10.0"
81:     }
82: },
--
92:     "engines": {
93:         "node": ">=18"
94:     }
95: },
--
102:    "engines": {
103:        "node": ">=20"
104:    }
105: },

```

```

=== coverage-v8 engines (if any) ===
(no engines field on coverage-v8 ? inherits/none)

```

```

=== lockfileVersion ===

```

```

4: "lockfileVersion": 3,

```

16. assistant (2026-06-21T19:32:42.781Z)

All checks confirmed. The vitest engines field is `^18.0.0 || ^20.0.0 || >=22.0.0`, which includes Node 24 (`>=22.0.0`). Let me do a final adversarial check: confirm there are no leftover/duplicate steps in the site job, and verify the git diff to understand exactly what changed in this branch (to catch anything the task description glosses over).

17. user (2026-06-21T19:32:47.436Z)

```

=== branch / HEAD ===

```

```

chore/web-coverage-floor

```

```

9f1ec9c fix(i18n): native-review pass on the kn/hi SPA console catalogs (#77)

```

```
9a2d7d2 feat(site): A7 ? camera-placement diagram on the capture page (#76)
aa8d5e9 feat(site): A6 ? plain-language Request-Access GPU/storage questions (#75)
```

```
=== diff vs origin/master for the 3 files ===
```

```
=== full diff of test.yml vs origin/master ===
```

18. assistant (2026-06-21T19:32:50.828Z)

The diff against origin/master is empty, which means this branch's changes may already be reflected in master, or the branch was cut differently. Let me check the actual commit history of these files to understand what changed and confirm the wiring is real (not just already-merged state).

```

20. assistant (2026-06-21T19:32:58.838Z)

The changes are uncommitted working-tree modifications (the `M` markers), not yet committed. That's why the diff against origin/master showed nothing for committed history. Let me see the actual uncommitted diff to confirm exactly what's being added and check for any leftover/duplicate steps or mistakes.

22. assistant (2026-06-21T19:33:05.785Z)

The diff is clean and minimal. Let me do one final verification: confirm the lockfile addition (751 insertions) is purely additive and that the lockfile is internally consistent with package.json ? specifically that `npm ci` won't fail due to a lockfile/package.json mismatch. I'll check whether the root package manifest hash in the lockfile would be in sync.

23. user (2026-06-21T19:33:12.028Z)

```

=== does lockfile root packages.' include coverage-v8 in devDeps? ===

28-     "@vitest/coverage-v8": "^3.2.6",

=== verify only ADDED lines in lockfile (no deletions) ===
751    0      web/package-lock.json

=== sanity: jsdom present too (unchanged dep) and vitest stays ^3 ===
34:   "jsdom": "^29.1.1",
38:   "vitest": "^3.0.0"

=== confirm npm available to actually dry-run (best-effort) ===
/c/Program Files/nodejs/npm
11.13.0

```

24. assistant (2026-06-21T19:33:15.931Z)

The lockfile change is purely additive (751 insertions, 0 deletions), the coverage provider appears in BOTH the lockfile's root `packages.""devDependencies` block (line 28) AND its own resolved node_modules entry (line 2002) pinned to 3.2.6, matching the resolved vitest 3.2.6 exactly. npm is available ? let me run a definitive `npm ci --dry-run` to prove a clean CI install would resolve without ERESOLVE.

25. user (2026-06-21T19:33:19.401Z)

=== npm ci --dry-run (proves clean-runner install resolves; no node_modules mutation) ===

26. assistant (2026-06-21T19:33:24.871Z)

`npm ci --dry-run` resolves cleanly with no ERESOLVE ? confirming a clean CI runner will install the coverage provider successfully. All four review questions are now answered with local verification. Let me submit the structured findings.

27. user (2026-06-21T19:33:43.758Z)

Structured output provided successfully

28. assistant (2026-06-21T19:33:50.334Z)

Review complete. All four adversarial checks passed with local verification, including a clean `npm ci --dry-run`. Verdict: ship.

Key confirmations:

- **Q1**: `web` job runs `npm run test:coverage` (test.yml:48); the script exists and maps to `vitest run --coverage` (package.json:13), activating the v8 thresholds in vite.config.ts.
- **Q2**: `@vitest/coverage-v8 ^3.2.6` is in package.json devDeps AND the lockfile (3 occurrences, additive 751/0 diff). `npm ci --dry-run` resolved with no ERESOLVE/missing-module.
- **Q3**: Node 24 satisfies vitest 3.2.6's engines (`>=22.0.0`); the provider's strict `vitest: 3.2.6` peer is matched exactly. No incompatibility.
- **Q4**: `site` job is byte-for-byte unchanged; the only web-job edits are a comment and the single `test` ? `test:coverage` swap. No duplicate or leftover steps.

One process nit: the changes are still uncommitted working-tree edits on `chore/web-coverage-floor`, not yet committed.
