1. user (2026-07-02T03:16:59.071Z)

You are an adversarial verifier in a tech-debt audit of the multi-repo workspace at C:/Users/avidu/Projects/khelsutra-guru (repos: badminton-highlight-indexer, khelsutra, sports-data-collector, rally-annotator, sports-obsreport; non-git dirs 'Annotation Setup', khelsutra-screencast). Today is 2026-07-02. All repos are at origin head.
Default stance: REFUTE. A round-1 finder claimed (UNVERIFIED):
REPO: sports-data-collector
CLAIM: Golden-corpus registry rot: all 6 owned 'curated' videos point at a deleted absolute local_path and the 4.9GB source videos are single-copy with no documented backup
INVESTIGATION HINTS: Query data/sports_metadata.db (read-only, sqlite3 or python) for videos rows with status=curated; check whether local_path targets exist on disk; check for the files under 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup/'; ALSO check whether these 6 videos already exist in gs://khelsutra-rally-corpus per the engine's docs/DATA_IN_GCS.md map (if gsutil/gcloud available use read-only ls, else rely on the doc) ? if they are in the bucket the data-loss half downgrades.
VERIFY against the CURRENT working tree: (1) reproduce the defect/debt from actual code at file:line; (2) check git log for a fix that already landed; (3) construct the concrete failure scenario or downgrade severity; (4) propose the correctly-scoped fix with effort S/M/L; (5) flag OWNER_GATED if it needs owner decisions (real cloud spend, product/strategy, counsel, Cloudflare dashboard).
HARD RULES: READ-ONLY ? no file modifications, no installs (pip download/index checks and WebFetch to pypi.org are OK), no test-suite runs. gh read-only OK. sqlite reads OK. CONFIRMED requires you personally observed the defect in current code/data; cite file:line for every claim.

1      # Data in GCS ? the corpus source-of-truth map
2
3      > **Scope:** this map covers the **training corpus only** (`gs://khelsutra-rally-
corpus`). **User-uploaded
4      > videos are a SEPARATE, already-shipped surface** ? `POST /api/assets` + the per-
request `medium_uri` +
5      > `GET /api/capabilities.storage` (see `khelsutra/docs/STUDIO_MEDIA_LIFECYCLE.md`) ? and
must stay physically
6      > isolated from the corpus bucket (the **D1** compliance boundary: consent / no-minors /
not-training holds at
7      > the storage layer). The deploy layer's bucket names now live in one place
(`deploy/gcp/buckets.env`).
8
9      **Status:** LIVE / in-progress (migration not complete). **Owner-gated** decisions in
S7.
10     **Last inventoried:** 2026-06-22 against `gs://khelsutra-rally-corpus`.
11     **Goal (owner, 2026-06-22):** run **all** training + inference from the cloud with **all
data in GCS**,
12     so the local Windows box (and the intermittently-mounted external drive) is **no longer
a blocker**.
13
14     > **? Other sessions: this is where the data lives.** Pull from `gs://khelsutra-rally-
corpus`, not
15     > from anyone's `C:` / `F:` / Google Drive. If something you need isn't in the bucket
yet, it's in the
16     > **gap table ($5)** ? flag it / migrate it, don't hard-code a local path.
17
18     This doc is the **data map**. The *machine* runbooks are
[SETUP_NEW_MACHINE.md](SETUP_NEW_MACHINE.md)
19     (spin up a box) and [deploy/gcp/README.md](../deploy/gcp/README.md) (provision GPU +
train/infer).
20     The cloud engine itself was built by the (archived) DECOUPLED_COMPUTE project
21     (`docs/archives/past_projects/DECOUPLED_COMPUTE/`); this doc does **not** redesign it ?
it records
22     *where the bytes are* and *what's still missing*.
23
24     ---
25
```

```

26     ## 1. The bucket
27
28     | | |
29     |---|---|
30     | Bucket | **`gs://khelsutra-rally-corpus`** (single corpus bucket) |
31     | Project | `gen-lang-client-0306026826` (billing *Khelsutra Billing*) |
32     | Region | `asia-south1` (Mumbai), UBLA, co-located with the GPU VMs |
33     | Auth | SA `rally-worker@gen-lang-client-0306026826.iam.gserviceaccount.com`
34     | Size today | ~2.06 GB (mostly past dry-run reels/outputs ? **not** the full corpus) |
35
36     The engine is **backend-agnostic by URI** (`backend/storage/ref.py`): `gs://` (or
37     `s3://`, `gdrive://`, or a bare local path. Pick the backend with **config + creds, no
38     code change**.
39     ---
40
41     ## 2. Canonical layout (the target contract)
42
43     The cloud worker's input/output contract (`backend/worker/__main__.py`; lineage:
44     `DECOUPLED_COMPUTE/04`):
45
46     | Prefix | Holds | Who reads/writes it |
47     |---|---|---|
48     | `videos/` | source videos / proxies (<clip>.mp4) | **input** to `worker infer` &
49     | `labels/` | golden rally labels (<clip>.rallies.csv) | **input** ground truth to
50     | `trajectories/` | cached WASB trajectory CSVs | ? **eval/litmus input** (GPU-free),
51     | `weights/<version>/` | trained Gen-0 bundles (`weights.json` + a run `manifest.json`)
52     | `models/` | upstream pretrained weights (`wasb_badminton_best.pth.tar`) | **staged to
53     | `outputs/<video_id>/` | per-video inference outputs (intervals, etc.) | **output** of
54     | `highlights/`, `promo/` | rendered reels + promo artifacts | output / demo |
55
56     > **Note on the manifest.** `worker train` does **not** read a pre-staged corpus
57     > *builds* one on-box at train time from `labels/` (+`videos/`), extracting trajectories
58     > by default** (`--trajectory-source synth`, CPU-mock) or for real via opt-in
59     > detector` (needs `videos/`). A `manifest.json` only appears as an **output** inside
60     > `weights/<version>/` bundle. The **eval/litmus** path is what wants a stable, path-
61     > ($7.3) ? and `manifests/golden.json` is currently consumed by **no code yet** (eval is
62     > see Known blockers).
63
64     ---
65
66     ## 3. What's actually in the bucket today (2026-06-22)
67
68     > **Phase-1 landed 2026-06-22:** added `trajectories/` (15), 15 canonical
69     > (= original-6 + `GX010137`/`GX010141` + 7 new; the 7 old `_proxy`/bare dupes were
70     > `manifests/golden.json`. The table below is the **pre-Phase-1** snapshot; the

```

```

remaining gap is **videos**
71     > (14 of 15) ? see §6/§7b/§8.
72
73     | Prefix | Present | Drift / notes |
74     |---|---|---|
75     | `labels/` | 7 files: `GX010128`, `mahadevpura-1`, + `Badminton BXH 2_proxy`, `Boxhill
Doubles_proxy`, `GX020094_proxy`, `GX030094_proxy`, `mahadevpura-2_proxy` | ? **inconsistent
naming** (`_proxy` on some, not others); ? **missing** the original-6 labels + `GX010137`,
`GX010141` |
76     | `videos/` | 3: `GX030094_proxy.mp4`, `mahadevpura-1.MP4`, `mahadevpura_smoke_180s.mp4`
| ? corpus videos/proxies almost entirely absent |
77     | `trajectories/` | ? | ? **does not exist** (every trajectory is local-only) |
78     | `models/` | `wasb_badminton_best.pth.tar` | ? (? WASB-C3 weight-provenance still an
open legal item before any external share) |
79     | `weights/` | `0.1.0-l4/` | ? first real L4 train bundle |
80     | `outputs/` | one `<video_id>/`, `parity/` | ? dry-run outputs |
81     | `highlights/`, `promo/` | reels + promo | ? |
82
83     **Drift summary:** the bucket has extra prefixes (`highlights/`, `promo/`, `models/`
alongside
84     `weights/`) and **inconsistent `labels/` naming**, and is **missing the bulk of the
corpus inputs**
85     (`videos/`, all `trajectories/`, most `labels/`). It reflects past *dry runs*, not a
complete corpus.
86
87     ---
88
89     ## 4. How the cloud consumes it
90
91     Provisioning + the verified commands live in
[ `deploy/gcp/README.md` ](../deploy/gcp/README.md) §3§5.
92     The data-facing entry points (`backend/worker/__main__.py`):
93
94     ```bash
95     # config (no secrets in config; auth via GOOGLE_APPLICATION_CREDENTIALS):
96     #   { "storage": { "backend": "local", "gcs": { "project": "gen-lang-client-0306026826"
} } }
97
98     # INFERENCE on one cloud video -> outputs/<video_id>/ in the bucket
99     python -m backend.worker infer \
100         --video-uri gcs://khelsutra-rally-corpus/videos/<clip>.mp4 \
101         --out-uri gcs://khelsutra-rally-corpus --segmenter wasb_hybrid --config config.json
102
103     # TRAIN from the bucket (reads labels/ [+ videos/], extracts trajectories, builds
manifest on-box,
104     # runs training.gen0.harness, pushes weights/<version>/):
105     RALLY_DETECTOR_IMPL=native python -m backend.worker train \
106         --corpus-uri gcs://khelsutra-rally-corpus --out-uri gcs://khelsutra-rally-corpus \
107         --version <v> --trajectory-source detector --segmenter wasb_hybrid --config
config.json
108     ```
109
110     A bare/relative path resolves under a configured `input_root`/`input_backend`
111     (`backend/storage/ref.py::resolve_input_uri`), so workflows can be written bucket-
relative.
112
113     ---
114
115     ## 5. The gap ? what's still local-only (why the box is still a blocker)
116
117     All of this is **tiny except the originals** ? the metadata that blocks cloud eval is <
25 MB total:
118
119     | Data | Where it is now | Size | In bucket? | Needed for |
120     |---|---|---|---|---|

```

```

121 | 20 WASB trajectory CSVs | `C:\?\Annotation Setup\Collect\Trajectories\` | **17.5 MB**
| ? none | eval/litmus (cached). *(No `cached` train source exists ? train synths or detector-
extracts.)* |
122 | golden manifest | `output/human_lovo_manifest.json` (C:-absolute paths) | 4.5 KB | ? |
eval corpus definition |
123 | original-6 labels | `F:\[Khelsutra]\Training\Golden Labelled\*.rallies.csv` | ~12 KB
| ? | train + eval |
124 | 7 new-clip labels | repo `output/*.rallies.csv` (gitignored) +*** F: archive (backed
up 2026-06-22) | ~12 KB | ? partial/inconsistent | train + eval |
125 | source videos / proxies | F: archive + Google Drive golden folder | **100s of GB** | ?
3 only | infer + train (real WASB extraction) |
126
127 > The corpus *metadata* (trajectories + labels + manifest, ~25 MB) is what actually
blocks GPU-free
128 > cloud eval and the served Gate-A litmus ? and it's trivially small to migrate. The
**videos** are the
129 > only large migration, and they already exist on **Google Drive** (the golden-corpus
folder), so they
130 > can go **Drive ? bucket from a cloud box**, keeping the local machine out of the path
entirely.
131
132 ---
133
134 ## 6. Migration plan (close the gap)
135
136 **Phase 1 ? corpus metadata (?25 MB, do first, removes the eval blocker).** Stage all
trajectories,
137 all labels, and a **bucket-relative eval manifest** into `gs://khelsutra-rally-corpus`.
Pending the $7
138 naming decision. Sketch:
139
140 ```bash
141 # trajectories (decision-free; absent today)
142 gcloud storage cp "C:\?\Collect\Trajectories\*.csv" gs://khelsutra-rally-
corpus/trajectories/
143 # labels (after the $7.1 naming decision) -> labels/<canonical-name>.rallies.csv
144 # eval manifest with gs:// (or bucket-relative) paths -> a stable manifest object ($7.3)
145 ```
146
147 **Phase 2 ? videos ? `videos/<name>.mp4`** (bucket name = the eval `name`, consistent
with
148 `trajectories/` + `labels/`). Sources (resolved 2026-06-22 ? see
`scratch/copy_videos_to_gcs.ps1`):
149
150 | Source | Clips | Size |
151 |---|---|---|
152 | Drive golden folder `~/Golden Label Videos Request - June 15/[Done] Video N\`
(**proxies**) | `mahadevpura_1/2`, `GX010128`, `GX020094`, `GX030094`, `Badminton_BXH_2`,
`Boxhill_Doubles` (7) | ~13.5 GB |
153 | F: archive (**full MP4s** ? proxy-first before upload) | `GX010137`, `GX010141`, +
original-6 (`adarsh_avi_singles`, `kushagra_singles`, `largetest_doubles`, `gbaaddy`,
`testlarge_short`, `mahadevpura_singles`) (8) | ~50 GB |
154
155 **Two ways to run it:**
156 - **Decoupled (preferred ? no local box):** `rclone` on a cloud VM with a Google-Drive
remote ?
157 `rclone copy gdrive:"<?/[Done] Video N>/<proxy>.mp4" :gcs:khelsutra-rally-
corpus/videos/<name>.mp4`
158 (one-time owner step: `rclone config` ? `gdrive` remote OAuth). Or `gdown <file-id>`
on the box for
159 the shared folder. This is the path that actually removes the local box.
160 - **Interim (today, owner box ? streams Drive/F: ? local ? GCS):** `pwsh
scratch/copy_videos_to_gcs.ps1
161 -Execute` (dry-run without `-Execute`; `-Only <name>` for one; skip-existing). Uses
local bandwidth.

```

```

162
163     **Priority:** the 7 Drive **proxies** first (already 1080p, sufficient for detection).
The 8 large F:
164     full MP4s should be **proxied to 1080p first** (cheaper storage + faster cloud decode)
before upload.
165     ? Two pre-existing non-canonical video objects (`videos/GX030094_proxy.mp4`,
`videos/mahadevpura-1.MP4`)
166     are superseded once `videos/GX030094.mp4` / `videos/mahadevpura_1.mp4` land ? verify-
dupe-then-delete
167     (same as the label cleanup). Track per-clip in S8.
168
169     **Phase 3 ? make eval/litmus read GCS (real code, NOT a config flip).** The eval drivers
170     (`served_gate_a.evaluate_video`, `calibrate_wasb.load_golden_gts`,
`TrackNetRunner.parse_trajectory_csv`)
171     open `spec["trajectory"]`/`spec["labels"]` with plain `open()` and gate on
`os.path.isfile()` ? they
172     have **no storage-layer fetch**, so a `gs://` manifest cannot be consumed today. Phase-3
must thread
173     `storage.fetch`/`resolve_input_uri` through those paths first. Then: re-probe
`fps`/`frame_width` from
174     the bucket videos (don't trust the copied values ? a wrong fps silently mis-aligns every
label), and
175     **re-measure the served Gate-A litmus on the GCS 15-clip set as a [[launch-report-
convention]] event**
176     (dual-set RAW+golden no-regression, not a silent eval-set swap ? see PR #236).
177
178     ---
179
180     ## 7. Decisions
181
182     1. **`labels/` naming ? LOCKED (owner, 2026-06-22):** `labels/<YYYY-MM-
DD>_<name>.rallies.csv`, where
183         `<name>` is the eval/manifest clip name and `<YYYY-MM-DD>` is the label's **authoring
date** =
184         the *earliest* mtime across all known copies (C: working copy + F: archive ? robust
to copy-resets;
185         a restored C: copy shows today, the F: archive keeps the real date). Fixes the
`_proxy` inconsistency
186         and disambiguates recycled GoPro names by date. *(Future, when videos are in the
bucket: optionally
187         add a `video_id`/MD5 sidecar for the strongest keying ? deferred, needs hashing each
video.)*
188     2. **Cache `trajectories/` ? YES, done 2026-06-22.** `trajectories/<name>.csv` cached so
cloud/CI eval +
189         the served Gate-A litmus run **GPU-free** (training can still regenerate via
`--trajectory-source detector`).
190     3. **Eval manifest in GCS ? done 2026-06-22.** `gs://khelesutra-rally-
corpus/manifests/golden.json`
191         (15 clips, `gs://` trajectory + label paths). The **local** litmus keeps its local-
path manifest;
192         flipping the litmus to read the GCS manifest is Phase 3.
193     4. **Originals migration scope ? OPEN** ? proxies-only vs full 4K, and how much of the
15-clip golden
194         set vs the wider archive. Source = Google Drive ? bucket from a cloud box (not the
local box).
195
196     > Phase-1 was run via a dry-run planner (resolve every clip's trajectory + label, stamp
the label's
197     > authoring date, build the `gs://` manifest) ? `gcloud storage cp` (planner kept in
gitignored
198     > `scratch/`; promote it to `scripts/` if corpus-sync recurs).
199     > ? **Cleanup DONE 2026-06-22:** the 7 pre-existing inconsistent label objects
(`*_proxy.rallies.csv`,
200     > bare `GX010128`/`mahadevpura-1`) were confirmed **byte-identical (MD5)** to the new
canonical names

```

```

201    > (content also on C:/F:) and **deleted** ? `labels/` now holds exactly the 15 canonical
objects.
202
203    > ? **gcloud gotcha (Phase-2):** `gcloud storage cp` treats `[...]` as a glob, so source
paths under
204    > `[Done] Video N/` (Drive) or `[Khelsutra] ?` (F:) fail with "matched no objects." The
owner-box
205    > script (`scratch/copy_videos_to_gcs.ps1`) stages such paths through a bracket-free
temp file; the
206    > `rclone` cloud path has no such issue.
207
208    ---
209
210    ## 7b. Known blockers ? must-fix before the DoD (2026-06-22 adversarial review)
211
212    1. **? RESOLVED 2026-06-22 ([#319](https://github.com/Khelsutra/badminton-highlight-
indexer/pull/319))
213        ? dated labels broke `worker train --trajectory-source detector`. **History:**
`cmd_train` derived the
214        join key as `fname.replace(".rallies.csv","")` ? `2026-06-22_GX020094`, then looked
up
215        `video_by_stem.get(name)` against bare video stems (`GX020094`), so every clip was
skipped and train
216        aborted with `<2 videos`. **Fix:** the label?clip-name derivation is now the helper
`_label_clip_name()`
217        in [backend/worker/__main__.py](../backend/worker/__main__.py), which strips both the
218        `.rallies.csv`/`.csv` suffix AND a leading `^\\d{4}-\\d{2}-\\d{2}_` prefix, so a dated
label and a legacy
219        bare label both resolve to the bare `videos/<name>` stem (preserves the locked human-
readable naming).
220        Tested: parametrized helper cases + a dated-label?bare-video `cmd_train` join
regression + per-label
221        skip-branch coverage. **(`synth` train + all eval were unaffected ? they don't join
videos.)*
222    2. **Phase-3 eval-on-GCS is net-new plumbing, not a flag** ? see §6 Phase-3. Eval is
local-FS only.
223    3. **`manifests/golden.json` is consumed by zero code today** (train ignores it; eval
can't fetch
224        `gs://`) ? it's correct-but-dormant until blocker #2 lands. Add a tiny manifest-
validator + a CI job
225        that authenticates to GCS and runs the litmus against it, or the DoD ("CI reads only
from `gs://`")
226        stays unverifiable.
227    4. **Gating infra (owner-only, not done):** GPU `GPUS_ALL_REGIONS` quota is still **0**
(no VM ever
228        created ? `deploy/gcp/README` §2); cloud-box secrets (SA JSON + rotated
`GEMINI_API_KEY` + WASB
229        weights staged from `models/`) aren't set up persistently. No real cloud train/infer
runs until these.
230    5. **Reproducibility:** the migration + copy helpers live in gitignored `scratch/`
231        (`migrate_golden_to_gcs.py`, `copy_videos_to_gcs.ps1`) ? promote to `scripts/` so
Phase-2/re-syncs
232        are repeatable from the repo, and add a referenced **proxy-generation** step for the
8 large F: originals.
233
234    ## 8. Progress tracker
235
236    | Item | Status |
237    |---|---|
238    | Bucket + SA + provisioning (deploy/gcp) | ? built |
239    | Cloud worker `infer`/`train` by URI | ? built (`backend/worker`) |
240    | This data-map doc | ? 2026-06-22 |
241    | Phase 1: trajectories ? `trajectories/` (15) | ? 2026-06-22 |
242    | Phase 1: labels reconciled ? `labels/<date>_<name>` (15) | ? 2026-06-22 |
243    | Phase 1: eval manifest ? `manifests/golden.json` | ? 2026-06-22 |

```

```

244 | Phase 1: remove 7 stale `_proxy`/bare label objects | ? 2026-06-22 (MD5-verified
dups, deleted) |
245 | Blocker $7b#1: dated labels join in `worker train --trajectory-source detector` | ?
2026-06-22 ([#319](https://github.com/Khelsutra/badminton-highlight-indexer/pull/319)) ?
`_label_clip_name` strips the ISO-date prefix |
246 | Phase 2: corpus videos/proxies ? `videos/<name>.mp4` | ? mapping + script done;
**1/15** demo'd (`mahadevpura_1`); 14 remain ? run `rclone` on a cloud box (preferred) or the
owner-box script |
247 | Phase 2: proxy the 8 large F: full-MP4 clips before upload | ? |
248 | Phase 3: eval/litmus default to the GCS manifest | ? |
249
250 **Definition of done:** a fresh GPU box (or CI) can run inference, the eval suite, and
Gen-0 training
251 reading **only** from `gs://khelsutra-rally-corpus` ? no `C:` / `F:` / local-Drive path
required.
252

28. assistant (2026-07-02T03:20:56.239Z)

The committed export manifest carries the same dead paths. Let me verify the relative-path rows from the repo root (my earlier check ran from the wrong CWD), and check git history on the DB.
