1. user (2026-07-02T04:45:39.415Z)

You are a senior engineer producing ONE isolated PR. Today is 2026-07-02.

REPO: C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector (a shared checkout ? follow the safety rules exactly).

AUDIT FINDINGS YOU ARE FIXING: R2-7 (Roora single-copy paid artifacts) ? Grep C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-highlight-indexer/c1fcb4aa-537d-41fd-858e-53f93349bf5a/scratchpad/AUDIT_REPORT_khelsutra-guru_2026-07-02.md for these IDs and read the full evidence + verifier notes before coding.

TASK BRIEF:

Two halves. (A) GCS archive (user-approved): upload the Roora pilot work product to gs://khelsutra-rally-corpus/archive/roora-pilot-review-20260606/ preserving relative structure ? source: 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup/Archive/Roora Pilot Review - 6 June 2026/' (badminton CVAT xml exports + pickleball/tabletennis zips) PLUS 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup/golden_labels_badminton.csv' and the rally_review.csv the report mentions (locate it under Annotation Setup). Use 'gcloud storage cp -r' (verify auth with gcloud config get-value account first; expect avi.dullu@gmail.com); AFTER upload verify with 'gcloud storage ls -r' and include byte counts in your report. ~3MB total ? if you find the total is much larger, upload only the label/annotation artifacts (never videos). (B) git-version the golden label CSVs in C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector: check repo conventions for where labels live (there may be a labels/ or data/ convention ? read CLAUDE.md/README/CODE_MAP first); add golden_labels_badminton.csv + the pickleball/tabletennis golden CSVs (find them under Annotation Setup; the report cites TT-0.909/PB-0.308 multi-sport eval results backed by them) + a short README pointing at the GCS archive URI. PR in sdc.

BRANCHING SAFETY (mandatory ? shared checkout, sibling sessions exist):

1. In the MAIN repo checkout run: git fetch origin
2. Create an ISOLATED WORKTREE: git worktree add "C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-highlight-indexer/c1fcb4aa-537d-41fd-858e-53f93349bf5a/scratchpad/wt-<shortname>" -b <branch-name> origin/master (branch explicitly FROM origin/master ? never from the current local branch; use origin/main for repos whose default is main)
3. Do ALL work inside the worktree. Before committing: git branch --show-current + git log --oneline -1 must show YOUR branch on the origin-master base.
4. Stage EXPLICIT paths only (git add <file> <file>) ? NEVER git add -A / . / -u
5. Before opening the PR: git log --oneline origin/master..HEAD must list ONLY your commits.

COMMIT/PR CONVENTIONS:

- Commit message: conventional style matching the repo's history; end the message with a blank line then: Co-Authored-By: Claude Fable 5 <noreply@anthropic.com>
- PR body: what/why, a "## Verification" section stating exactly what you ran locally and what CI covers, and end with: ? Generated with [Claude Code](https://claude.com/claude-code)
- Do NOT merge the PR. Do NOT remove the worktree (a fixer may need it). Return the PR number, branch, worktree path.

QUALITY BAR:

- Read the repo's CLAUDE.md first; for the engine also docs/CODE_MAP.md \$0 (file placement)

before adding any new file.

- Add/extend tests for every behavior change. Run the targeted tests you touched (python -m pytest tests/<relevant> -q) + ruff check on changed files; if mypy config exists, run mypy on touched modules. Full suite is CI's job ? do not run it.
- Default-safe: new knobs default OFF / behavior-preserving unless the task explicitly says otherwise.
- The full audit evidence is in C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-highlight-indexer/c1fcb4aa-537d-41fd-858e-53f93349bf5a/scratchpad/AUDIT_REPORT_khelsutra-guru_2026-07-02.md ? Grep it for your finding IDs and READ the verifier notes; they contain corrections (exact file:line, scoping traps) you MUST honor.

If the brief's premise turns out false against current code (something already fixed, file moved), adapt honestly and say so in notes ? never force a pointless diff. If you genuinely cannot complete (env broken, auth missing), open NO PR and explain in notes with pr_number=0.

480 ### R2-5 [P1/S] ? badminton-highlight-indexer
481 **Engine CLAUDE.md 'Current state' section is ~3 weeks false ? claims platform/owned-model work 'has not started'**
482 - verdict: CONFIRMED
483 - reasoning: Personally reproduced against the working tree and git history. (1) C:\Users\avidu\Projects\khelsutra-guru\badminton-highlight-indexer\CLAUDE.md:30-31 states "***No platform/owned-model implementation has started.**"; lines 34-37 say the "committed next PLATFORM slice = async job model" and the owned-model track "starts at a greenlit Phase-0 milestone... Do not start implementation without explicit owner approval"; lines 41-42 call `StorageBackend` + `ComputeBackend` registries "*Future:". git blame shows lines 30-37 were last written 2026-06-10 (commit 62fb2fb) and never touched since, despite CLAUDE.md itself being edited 6+ times after (e735fd4 06-13 ... af1ccbe 06-30 ? all other sections). (2) Current-tree reality contradicts every one of those claims: backend/storage/ contains a StorageBackend ABC + local/gcs/gdrive/gdrive_api/s3/capabilities implementations; backend/compute/base.py + cloud_run.py exist (ComputeBackend); backend/api/job_worker.py + tests/test_async_jobs.py exist ? the "committed next slice" async job model already shipped (8bcf6ce #339 "make /api/compile async (202 + poll)", 2026-06-22); backend/flywheel.py + backend/worker + backend/eval/served_gate_a.py exist. Owned-model track: a555887 (2026-06-20) "M2 FINALIZED ? Gen-0 weights/0.1.0-l4 pushed"; 4134721 archives DECOUPLED_COMPUTE as "DELIVERED (M0-M2 + M3.5 on GCP)"; 334ad0f (#336) M11 data-flywheel; b72e6de (#319) training worker fix. 314 commits landed since 2026-06-13, through 2026-07-01 (e410136), including a recorded launch NO-GO decision 2026-06-30 (4a7bfbe #404) ? i.e., the project reached launch-consideration, the opposite of "not started". (3) No fix landed: git log -- CLAUDE.md shows the last commit touching it (af1ccbe, 2026-06-30) added only the bit-flip-PR convention + Python 3.10 line; the Current state section is untouched since 06-10. Bonus staleness in the same file: lines 18-19 claim rally_gate.py Gate A is "not wired into production" while backend/eval/served_gate_a.py and c8a493d "served Gate-A litmus" (#401) indicate a served Gate-A path now exists.
484 - notes: Sharper failure scenario: CLAUDE.md is auto-loaded project memory for every fresh agent session in this heavily agent-driven repo. A fresh session reads "No platform/owned-model implementation has started" + "Do not start implementation without explicit owner approval" and will (a) tell the owner the async job model is an un-started, gated future slice and propose designing/implementing what already exists (backend/api/job_worker.py), (b) treat StorageBackend/ComputeBackend as "Future" and re-design duplicates of backend/storage/ and backend/compute/, (c) misreport project status upward (e.g., in handoffs/audits) as pre-implementation when Gen-0 weights shipped and a launch NO-GO was formally recorded 06-30. This also directly violates the workspace's own "keep it honest ? reflects real, shipped state" convention. Correctly-scoped fix (S, one doc-only PR): rewrite CLAUDE.md "Current state" (lines 29-37) to reflect reality as of 2026-07-01 ? platform slice (async jobs, storage/compute backends, capabilities/assets endpoints) SHIPPED; owned-model M0-M2+M3.5 DELIVERED on GCP, Gen-0 weights pushed; launch NO-GO 2026-06-30 with pointer to #404/docs; fix line 41-42 ("Future" ? "implemented, see backend/storage/, backend/compute/"); fix lines 18-19 Gate-A "not wired" claim against backend/eval/served_gate_a.py; re-point "committed next slice" at whatever docs/NEXT_STEPS.md currently prioritizes. Not OWNER_GATED ? this is a factual truth-sync of docs to shipped code, the same class as the repo's prior "audit truth-sync" commits (62fb2fb, 9736a3b); no spend or strategy decision required. Round-1 claim of "~3 weeks false" is accurate: section frozen 2026-06-10, contradicting implementation landed from ~2026-06-20 onward.
485
486 ### R2-6 [P1/M] ? sports-data-collector
487 **Golden-corpus registry rot: all 6 owned 'curated' videos point at a deleted absolute local_path and the 4.9GB source videos are single-copy with no documented backup**
488 - verdict: CONFIRMED
489 - reasoning: Registry rot half CONFIRMED by direct observation. sports-data-collector/data/sports_metadata.db (git-tracked; rows landed in commit 9e6f204 "#19 ingest the n=6 owned golden corpus", DB last touched 9f1e792 with no path fix since): videos table has 8 status='curated' rows; the 6 owned ones (adarsh_avi_singles, kushagra_singles, targetest_doubles, gbaaddy, testlarge_short, mahadevpura_singles; license_type=Proprietary, is_commercial=1) all carry local_path under 'C:\Users\avidu\Projects\Annotation Setup\Collect\Golden Labelled*.MP4' ? that directory does not exist. The folder moved to 'C:\Users\avidu\Projects\khelsutra-guru\Annotation Setup\' whose 'Golden Labelled\' now contains ONLY the six .rallies.csv label files; zero copies of the MP4s exist anywhere in the workspace (searched). The committed export artifact data/eval_export/manifest.json repeats the same 6 dead absolute paths. Code consequence at sports-data-collector/src/cli/curate.py:679-684: export of a curated video with missing local_path emits md5=None plus a warning, and src/core/manifests.py:23-26 documents md5 as "the indexer's join key" ? so any fresh export of the entire owned golden corpus loses the deterministic MD5 join to badminton-highlight-indexer.

Data-loss half CONFIRMED as single-copy but the "no documented backup" wording is wrong: (a) verified live via read-only 'gcloud storage ls' (2026-07-02): gs://khelsutra-rally-corpus/videos/ has 10 objects and NONE of the six originals, while labels/ DOES hold all six (2026-06-08_adarsh_avi_singles.rallies.csv etc.) and trajectories are in the bucket ? annotation work-product is safe, source footage is not; (b) Google Drive golden folder (G:\My Drive\Sharing\Annotation Videos\Golden Label Videos Request - June 15) holds only the 7 proxy clips, not the original six; (c) the sole remaining copy is documented at F:\[Khelsutra] GoPro Hero Black 12\KheISutra\Training\Golden Labelled\ per badminton-highlight-indexer/scratch/copy_videos_to_gcs.ps1:31-36 and docs/DATA_IN_GCS.md:153 (§6 Phase-2) ? and the F: drive is NOT currently mounted (only C: and G: exist), so even that copy's integrity is unverifiable today, and no MD5s of the six were ever persisted anywhere (eval_export/manifest.json predates the md5 field from PR #51; no proxy-registry rows).

490 - notes: Corrections to the round-1 claim: (1) Size is ~37.9 GB, not 4.9 GB ? per-clip sizes annotated in scratch/copy_videos_to_gcs.ps1:31-36 (10.9+7.7+11+6.7+1.4+0.19 GB); the ~4.9-5.2 GB figure matches the three unrelated Roora pilot videos under 'Annotation Setup/Archive/.../Annotation Videos/'. (2) "No documented backup" is false ? badminton-highlight-indexer/docs/DATA_IN_GCS.md §5/§6/§8 explicitly documents the F: archive location and a Phase-2 migration plan (tracker at doc line 246: 14/15 videos still unmigrated); but "single-copy" stands: exactly one copy of the six source videos exists, on an intermittently-mounted external HDD, unverifiable right now, with no persisted hashes. (3) Downgrade from potential P0 to P1 because labels + trajectories for all six ARE in gs://khelsutra-rally-corpus (verified), so GPU-free eval/litmus and synth-train survive a drive failure; what would be permanently lost is the proprietary source footage (no re-extraction via --trajectory-source detector, no re-annotation, no re-rendering). Sharper failure scenarios: (a) F: HDD failure = permanent loss of ~38 GB of irreplaceable owned golden footage; (b) today, 'curate export' on the owned corpus emits md5=None for all six (curate.py:679-684), silently breaking the indexer MD5 join contract added in PR #51. Correctly-scoped fix (M, cross-repo): mount F:, verify + hash the six MP4s (persist MD5s into the DB/manifest immediately ? S and decision-free), generate 1080p proxies, upload via the existing scratch/copy_videos_to_gcs.ps1 or the rclone cloud path (Phase-2, already planned), then reprint/annotate local_path (or add a gs:// video_uri column) in sports_metadata.db and refresh data/eval_export/manifest.json. Partially OWNER_GATED sub-decision only: DATA_IN_GCS.md §7.4 leaves proxies-only vs full-4K migration scope OPEN and the upload is real (though tiny, cents/month) GCS spend; the hash-and-record step and the DB path fix need no owner decision.

491

492 ### R2-7 [P2/S] ? non-git

493 **Roora vendor pilot record (paid deliverables + corrected golden labels + 3 videos) is a single unversioned local copy at risk of loss**

494 - verdict: CONFIRMED

495 - reasoning: CONFIRMED for the paid deliverables + corrected golden labels; the "3 videos" component of the claim is REFUTED (Drive copies exist). Evidence: (1) Single-copy artifacts verified on disk: raw paid CVAT deliverables at 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup/Archive/Roora Pilot Review - 6 June 2026/' ? badminton/{badminton, badminton (1), badminton (2)}/Annotations/*.xml (~2.3 MB per-frame boxes), pickleball/*.zip (3 zips, 260 KB), tablettennis/*.zip (3 zips, 213 KB) ? plus the human-corrected golden labels 'Annotation Setup/golden_labels_badminton.csv' (2.5 KB, mtime 2026-06-06) and the rescued multisport goldens 'Annotation Setup/Trajectories/roora/{pickleball,tablettennis}_rallies.csv'. (2) Not in git: sports-data-collector tracks only the AS-DELIVERED parse (data/roora_badminton_canonical.csv, verified via git ls-files + diff ? it still has rally 2 = 0:02.503?0:32.533, rally 7 end 1:51.612, no rallies 7.5/16.5), while golden_labels_badminton.csv holds the corrections (rally 2 start?0:29, rally 7 end?1:38, missed rallies 7.5@1:46 and 16.5@3:34 added, winner?out fixes) ? those corrections exist NOWHERE else (find over C:/Users/avidu/Projects + Downloads returned only this one file). (3) Not in GCS: recursive 'gcloud storage ls -r gs://khelsutra-rally-corpus/**' contains zero objects matching roora|pilot|pickle|tablettennis|sample_long|golden_labels; labels/ holds exactly the 15 canonical corpus clips (pilot video not among them); archive/ holds only a droplet archive. (4) Not on Drive: 'G:/My Drive/Sharing' has guidelines/briefs and 'Golden Annotations' (MahadevpuraSingles only) ? no CVAT exports. (5) Outside every backup convention: badminton-highlight-indexer/docs/DATA_IN_GCS.md §5 gap table (lines 117?131) covers only the 15-clip corpus and never mentions the pilot artifacts (and its line 121/142 path 'C:\?\Annotation Setup\Collect\Trajectories\' is stale ? the folder moved, no Collect dir exists); the F: backup (memory checkpoint 2026-06-22) covered only the 7 new-clip labels; docs/archives/roora-vendor/README.md archives only guidelines+ADR, not pilot results; F: is currently unmounted. REFUTED part: the 3 pilot videos have byte-size-identical cloud copies at 'G:/My Drive/Sharing/Annotation Videos/Pilot Videos/' (Sample Long Video - Baadminton.MP4 =

2,882,861,900 B; Video 2 - Pickleball.mp4 = 1,435,276,306 B; Video 3 - Tabletennis.mp4 = 871,944,715 B ? all match local), and the local 'Annotation Videos/desktop.ini' references GoogleDriveFS.exe proving Drive File Stream provenance. Owner's own memory audit had flagged the precursor ("Roora multisport CSVs live ONLY in %TEMP%? one cleanup from loss"); the rescue moved them to Annotation Setup but they remain a single unversioned C:-disk copy.

496 - notes: Correction to the finding: the at-risk payload is NOT the 4.9 GB folder ? the videos are safe on the owner's Google Drive. What is genuinely one C:-disk failure (or one folder-cleanup) from loss is ~3 MB of paid, partly irreplaceable work product: the raw vendor CVAT exports for all 3 sports (box geometry the tracked canonical CSVs discard), the human frame-by-frame correction record (golden_labels_badminton.csv + rally_review.csv ? hours of review labor and the calibration evidence behind the vendor feedback), the pickleball/tabletennis golden CSVs backing the recorded TT-0.909/PB-0.308 multisport result, and the pilot review MD/PDF record. Vendor re-export from CVAT job 4075945 is not under owner control. Failure scenario: C: SSD failure or a cleanup of the non-git 'Annotation Setup' folder silently destroys the only record of the paid pilot and its corrected labels; nothing in DATA_IN_GCS.md's migration plan would ever pick it up because the pilot artifacts are absent from its \$5 gap table. Fix (S, not owner-gated for the metadata): one 'gcloud storage cp -r' of 'Annotation Setup/Archive/Roora Pilot Review - 6 June 2026/' (excluding Annotation Videos/, already on Drive) + 'Annotation Setup/{golden_labels_badminton.csv,rally_review.csv,Trajectories/roora/}' to gs://khelsutra-rally-corpus/archive/roora-pilot-2026-06/ (archive/ prefix precedent already exists; ~3?10 MB, negligible cost), then add a Roora-pilot row to DATA_IN_GCS.md \$5 and fix its stale 'Annotation Setup\Collect\Trajectories' path (lines 121/142). Including the 3 pilot videos in the bucket is the only owner-gated piece (DATA_IN_GCS \$7 open decision 4, ~5 GB ? \$0.10/mo) and is optional given the Drive copies.

497

498 ### R2-8 [P1/S] ? badminton-highlight-indexer

499 **Upload retention sweep tool exists but nothing schedules it ? unbounded upload growth + unenforced 7-day privacy retention on any hosted deployment (#301)**

500 - verdict: CONFIRMED

501 - reasoning: Tool exists: badminton-highlight-indexer/tools/cleanup_caches.py (T11 retention sweep, --uploads-retention-days default 7.0 at ~line 407; classify() purges uploaded videos + .partial-* in the uploads zone; landed cb7394b/#299). Nothing schedules it: workspace-wide grep for cleanup_caches hits only the tool/tests/docs and an error string (backend/pipeline/detectors/base.py:162); zero references in .github/workflows/nightly.yml, deploy/cloudrun/, deploy/digitalocean/, scripts/, and zero cron/timer/sweep references in khelsutra/deploy/droplet/ (khelsutra-engine.service has no companion timer). Backend startup only sweeps Gemini remote orphans (backend/main.py:1808 _maybe_sweep_gemini_orphans), not local uploads. Issue #301 is OPEN (viewed via gh today); no scheduling commit in git log between cb7394b and master e410136. Deployment is LIVE: khelsutra/deploy/DEPLOY_ALPHA.md line 3 "Status: LIVE (deploy live-verified on the droplet 2026-06-22)"; uploads land via backend/api/uploads.py into security.upload_dir (/srv/khelsutra/incoming/uploads per runbook \$2.2).

502 - notes: Sharper failure scenario: the alpha droplet is live and accepting uploads behind Cloudflare Access; without any scheduled `python -m tools.cleanup\_caches --apply`, a tester's footage uploaded day 0 is still on disk day 30+ (unenforced 7-day privacy retention, an explicit owner policy per the tool docstring, 2026-06-21), and output/uploads grows unboundedly until require_free_bytes (backend/api/uploads.py:93) starts rejecting new uploads (service degradation on the small CPU droplet). Mitigations that keep this P1 not P0: runbook notes testers had not yet exercised the upload CUJ (OTP login + Gemini key rotation pending as of 2026-06-22), and the owner can run the sweep manually. Fix scope (S): do NOT re-implement the sweep ? ship a systemd timer + oneshot unit (or cron line) alongside khelsutra/deploy/droplet/khelsutra-engine.service that runs `python -m tools.cleanup\_caches --apply --uploads-retention-days 7 --uploads-dir <security.upload\_dir>` daily with --json output captured to journald; default-OFF/opt-in flag so local single-user installs are unaffected; document enable+verify steps in DEPLOY_ALPHA.md; one smoke test asserting the wrapper passes the right flags (tool logic already unit-tested in tests/test_cleanup_caches.py). Issue #301's acceptance criteria already spec this exactly. Partial owner gate: shipping the timer unit + docs is not gated, but *enabling* it on the live droplet is an ops action requiring the owner's SSH access, and #301 flags one open design call (whether apply should also skip uploads referenced by non-terminal jobs rows) ? recommend defaulting to the time-window-only behavior and letting the owner ratify.

503

504

505 ## Owner-gated (flagged, no action)

506

507 - [P2] badminton-highlight-indexer: **P0-rename remainder: person/venue-attributable video names still committed in code and baselines** ? Defect verified in current tree: backend/eval/rally_seg_eval.py:52-54 commits MULTICOURT_CLIPS = frozenset({"mahadevpura_2", "GX010128", "Badminton_BXH_2", "Boxhill_Doubles"}) (venue-attributable), and eval_baselines/heuristic_lovo_n6.json per_video keys are adarsh_avi_singles, kushagra_singles, targetest_doubles, gbaaddy, testlarge_short, mahadevpura_singles (person first names + venues). git log on rally_seg_eval.py (latest 0c9c693 #395) and on the baseline (#77) shows no rename ever landed. docs/GOLDEN_REGRESSION_FIXTURES.md:151 and docs/BACKLOG.md:61 track this exact remainder as DEFERRED per the owner's safe-scope decision (2026-06-16) with trigger "before any open-sourcing / public commit" ? a product/strategy owner gate ? and the coordinated fix requires renaming the owner-held gitignored output/human_lovo_manifest.json in lockstep or the gen0 LOVO training floor breaks. Repo is currently PRIVATE (gh repo view: Khelsutra/badminton-highlight-indexer, isPrivate=true), so no live public exposure today. Real, unfixed debt, but remediation is explicitly owner-gated on the open-sourcing decision and owner-side data coordination.

508

509 - [P2] khelsutra (avidullu/khelsutra): **Issue #114 stale-open: CF Access guest-login debugging against a deployment that no longer exists** ? Debt is real but the fix is an owner tracker call on the owner-gated alpha/serving track. Verified: (1) gh issue view 114 ? OPEN, createdAt == updatedAt == 2026-06-23T10:25:52Z, 0 comments; body is CF-dashboard-only triage of the Access allowlist for the droplet alpha and explicitly says "Deferred by owner 2026-06-23". (2) Cited anchor exists: deploy/DEPLOY_ALPHA.md:106 is the Allow-policy/Emails-allowlist step (line 105 is the app-domain step ? off by one). (3) Deployment gone: memory session-handoff.md:19 ? droplet claude-do-rally-test/168.144.126.176 deleted 2026-06-25, "the prior 'LIVE alpha on the droplet' ... is GONE ? alpha is paused"; api.khelsutra.guru CNAME/CF-Access flagged for cleanup. (4) Not already fixed: git log -- deploy/DEPLOY_ALPHA.md shows nothing relevant after 2026-06-23 (latest 6e4dbaf PR #113 is the unrelated GPU-VM doc); no in-repo reference to #114. (5) Nothing in-repo can fix or verify it ? the Access policy lives in the Cloudflare dashboard and the origin behind app./api. no longer exists. Fix requires owner disposition (close vs retile), squarely under the alpha/serving go-live gate.

gcloud auth confirmed (avi.dullu@gmail.com). No CLAUDE.md in sdc ? let me read the README and check repo conventions.

13. user (2026-07-02T04:47:02.618Z)

```
1      # Sports Data Collector & Curator
2
3      A clean, extensible Python codebase and CLI toolchain designed to discover, ingest,
validate, and curate sports video datasets. The repository stores annotations and video metadata
in an SQLite database, supports sport-specific tables and schemas, manages video storage outside
of Git, and enforces strict commercial license compliance.
```

```

4
5     > **Pipeline role:** this repo is the *data producer* feeding the **badminton-highlight-indexer**, which trains/evaluates an offline rally segmenter on this curated, commercially-licensed data. See [docs/PIPELINE_ROLE.md](docs/PIPELINE_ROLE.md) for why `export`/`fetch` exist and how the two repos fit together.
6
7     ---
8
9     ## Features
10
11     - **SQLite Backend**: Centralized `sports_metadata.db` with a generic `videos` table and sport-specific annotation tables (`badminton_rallies`, `tennis_points`, `cricket_deliveries`, `pickleball_rallies`, `tabletennis_rallies`).
12     - **Commercial License Flagging**: Each ingested source license is checked against a configured whitelist (`MIT`, `Apache-2.0`, `BSD`, `CC0`, `CC-BY`, `Public-Domain`, `Proprietary`) and the resulting `is_commercial` flag is stored alongside the video. Non-commercial sources (like `CC-BY-NC-SA`) are flagged as non-commercial but still ingested ? nothing is discarded automatically. The whitelist is read from `config/config.yaml` consistently across the parser, validator, and CLI.
13     - **Overlap & Duration Validation**: Ensures chronological event bounds (e.g. rally start/end times) do not overlap and that durations are positive.
14     - **Stroke-level CSV Parser**: Ingests ShuttleSet/CoachAI-style stroke CSV logs and aggregates them into rally durations using configurable start/end time buffers.
15     - **Local Ingestion Mode**: Manually registers local videos and associated CSV/JSON annotation files directly into the database as curated entries.
16     - **Interactive Curation CLI & Visual Play Harness**: Let's you query DB status, list staging entries, review sample timestamps, and approve/reject them. It includes a built-in play function that opens the video in your default browser at the exact rally segment (using HTML5 media fragments `#t=start,end` for local files or YouTube start time markers `&t=start` for remote videos) for manual visual verification.
17
18     ---
19
20     ## Installation
21
22     Ensure you have Python 3.9+ installed.
23
24     1. Clone or download the repository.
25     2. Install the package and dependencies:
26         ```bash
27         pip install -e .           # core: curate / import-local / export / status
28         pip install -e ".[fetch]" # adds yt-dlp for video acquisition (fetch / crawler)
29         pip install -e ".[dev]"   # test tooling (pytest, pytest-cov)
30         ```
31
32     ### External requirements (not pip-installable)
33
34     The `fetch` command and the ShuttleSet crawler shell out to external binaries. They degrade gracefully (a clear error / skipped download) when missing, but are **required** for video acquisition:
35
36     - **FFmpeg / ffprobe** ? used to probe the real resolution/fps of downloaded files.
37     - **A JS runtime (e.g. [deno](https://deno.com))** ? needed by yt-dlp to solve YouTube's challenge for high-resolution formats. `fetch` auto-detects a deno install at `~/deno/bin`.
38
39     Core curation/import/export/status commands work without any of these.
40
41     ---
42
43     ## Usage
44
45     All commands should be executed from the root of the project. Make sure `PYTHONPATH` is set to the current directory:
46
47
48
49
50

```

```

51     ```bash
52     # On Windows PowerShell:
53     $env:PYTHONPATH="."
54     ```
55
56     ### 1. View Database Status
57     To check the current statistics of staging vs. curated items:
58     ```bash
59     python -m src.cli.curate status
60     ```
61
62     ### 2. Ingest External Datasets to Staging
63     To parse external raw stroke-level datasets (e.g. CoachAI format) and register them in
    staging:
64     ```bash
65     python -m src.cli.ingest --sport badminton --parser coachai --file-path
    data/staging_coachai_match.csv --license CC-BY-NC-SA --video-id staging_match_non_comm
66     ```
67
68     ### 3. Launch the Interactive Curation Tool & Play Harness
69     To review staging items, inspect their timestamps, play individual rallies in the
    browser to visually verify their start and end bounds, and approve or reject them:
70     ```bash
71     python -m src.cli.curate curate
72     ```
73
74     ### 4. Manually Import Local Videos & Annotations
75     To register a local video file alongside its JSON/CSV annotation file (bypasses
    staging):
76     ```bash
77     python -m src.cli.curate import-local --sport badminton --video-path
    "data/videos/my_custom_match.mp4" --annotations-path "data/mock_local_badminton_anno.json"
    --match-name "My Custom Local Match" --license Proprietary
78     ```
79     `import-local` works for every configured sport ? `badminton`, `tennis`, `cricket`,
    `pickleball`, and `tabletennis` ? from either a JSON or a CSV annotations file. For the
    canonical rally CSV schema and the rater-facing instructions used to produce these files (e.g.
    via an annotation vendor), see [docs/annotation/](docs/annotation/).
80
81     ### 5. Fetch / Upgrade Videos to Best Resolution
82     Videos are always downloaded at the best resolution available** (via yt-dlp `bv*+ba/b
    -S res,...`, merged to MP4); the actual width/height/fps is ffprobed and stored ? never assumed.
    The `fetch` command (re)downloads videos for entries already in the DB and updates
    `local_path`/`resolution`/`fps` in place, preserving all rally annotations and curation
    status (no clean slate needed):
83     ```bash
84     # Upgrade every sub-720p video to best resolution, using a logged-in browser's cookies:
85     python -m src.cli.curate fetch --cookies-from-browser firefox
86
87     # A single video, forcing a re-download even if a good local copy exists:
88     python -m src.cli.curate fetch --video-id shuttleset_1 --force --cookies-from-browser
    firefox
89     ```
90     Flags: `--sport`, `--video-id`, `--status {staging,curated,all}` (default `all`),
    `--min-height` (skip videos already at/above it unless `--force`; default `720`), `--max-height`
    (cap resolution, e.g. `1080`; default best available), `--force`, `--include-noncommercial`,
    `--cookies-from-browser`/`--cookies`, `--player-client`. A global resolution cap can also be set
    via `video_storage.max_height` in `config/config.yaml`. Re-runs are cheap and resumable; a
    download that falls below `--min-height` is treated as a failure (discarded, DB left
    unchanged) so a flaky low-res result never overwrites a good entry.
91
92     > Authenticated cookies are strongly recommended. Anonymous YouTube downloads are
    throttled and non-deterministic (often falling back to 144p). Pass `--cookies-from-browser
    firefox` (or `chrome`/`edge`/`brave`, fully closed) ? or `--cookies cookies.txt` ? to use a
    logged-in (ideally Premium) session for fast, reliable best-resolution downloads. Chrome's app-

```

```

bound cookie encryption may block direct reads on Windows; Firefox reads cleanly even while
open.
93     >
94     > **JS runtime:** yt-dlp needs one (e.g. [deno](https://deno.com)) to solve YouTube's
challenges for high-res formats; `fetch` auto-detects a deno install at `~/.deno/bin`. The
default `--player-client` avoids `web`/`web_safari`, which YouTube forces into SABR streaming
(drops to 144p).
95
96     ### 6. Export Annotations as Indexer-Ready Eval/Training Sets
97     To turn curated annotations into ground-truth files the badminton-highlight-indexer can
score and train against, export per-video `start,end` CSVs plus a `manifest.json`:
98     ```bash
99     # Curated + commercially-safe videos across all supported sports (default):
100     python -m src.cli.curate export --out-dir data/eval_export
101
102     # One sport, also including staging entries:
103     python -m src.cli.curate export --sport badminton --include-staging
104     ```
105     The exporter writes `//.csv` (decimal-second `start,end` rows)
and a `manifest.json` pairing each CSV with its video `local_path`/`video_url`, fps, resolution,
and license. The indexer keys videos by **file MD5**, not by our `video_id`, so the downstream
eval/training run must process the exact video file named in the manifest. Flags: `--sport`
(restrict to one sport), `--include-staging` (default: curated only), `--include-noncommercial`
(default: commercial-safe only).
106
107     ---
108
109     ## Configuration
110
111     Adjust settings in `config/config.yaml`:
112     - **database_path**: Path to the SQLite database.
113     - **video_storage**: Local folder path and automatic download size limit.
114     - **commercial_licenses**: Whitelist of licenses allowed for commercial use.
115     - **supported_sports**: Allowed sports categories.
116
117     ---
118
119     ## Documentation
120
121     - [docs/PIPELINE_ROLE.md](docs/PIPELINE_ROLE.md) ? how this repo feeds the **badminton-
highlight-indexer** (`export` / `fetch`).
122     - [docs/DECISIONS.md](docs/DECISIONS.md) ? collector-local decision records
(**ADR-001**: keep explicit per-sport code instead of a registry, with an "adding a new sport"
checklist).
123     - [docs/annotation/](docs/annotation/) ? the vendor annotation package used to produce
golden rally labels:
124         - [ROORA_BRIEF.md](docs/annotation/ROORA_BRIEF.md) ? vendor brief + the canonical
rally CSV schema.
125         - [ANNOTATION_GUIDE.md](docs/annotation/ANNOTATION_GUIDE.md) ? the illustrated rater
guide (singles & doubles).
126         - [INTAKE_MANIFEST_TEMPLATE.csv](docs/annotation/INTAKE_MANIFEST_TEMPLATE.csv) ? per-
video intake sheet.
127         - [NDA_TEMPLATE.md](docs/annotation/NDA_TEMPLATE.md) ? mutual NDA template (have
counsel review).
128
129     ---
130
131     ## Running Tests
132
133     We use `pytest` for unit and integration testing:
134     ```bash
135     python -m pytest tests/
136     python -m pytest tests/ --cov=src --cov-report=term-missing # with coverage (~87%)
137     ```
138

```

16. user (2026-07-02T04:47:39.729Z)

128 - why it matters:
129 - proposed fix: One doc PR: flip DEPLOY_ALPHA.md status to RETIRED/HISTORICAL with a pointer to the retirement date and to issues #97/#114; rewrite GPU_VM_SERVING.md prerequisites to source the Gemini key/AUD/tunnel token from their canonical stores (Drive / CF dashboard) instead of the dead droplet; delete or soften the unimplemented /api/health-banner claim. The related api.khelsutra.guru CNAME + CF-Access application cleanup is Cloudflare-dashboard work (owner-gated) ? note it in the doc as pending.
130 - verifier notes: Two refinements. (a) "all impossible now" is slightly overstated: per 5ffb750's message the droplet's data was archived to gs://khelsutra-rally-corpus/archive/droplet-claude-do-rally-test-20260625/, so /srv/khelsutra/config.json (and its cf_access_aud) is likely recoverable from that archive, and the tunnel token is recoverable from the Cloudflare dashboard since the tunnel is token-managed (GPU_VM_SERVING.md:24-26). The doc rewrite should point at the gs:// archive + CF dashboard as the canonical sources ? strictly

better than the finder's "Drive / CF dashboard" suggestion for the AUD. (b) DEPLOY_ALPHA.md:143 is partial rot, not total: the SPA does degrade gracefully when the engine is unreachable (SetupWizard offline branch, web/src/components/SetupWizard.tsx:84-142), but via a capabilities fetch, and there is no persistent "engine offline" banner and zero /api/health references ? so soften rather than delete the claim. Also worth citing commit 5ffb750 / PR #117 and the "Cloudflare is now the single canonical host" line in the doc PR as the retirement record, since no .md currently captures it.

131 - verifier reasoning: Personally reproduced every element of the claim in the current working tree (khelsutra @ f9eea14). (1) deploy/DEPLOY_ALPHA.md:3 reads "***Status:** `LIVE` (deploy live-verified on the droplet 2026-06-22...)" and :35 names "the CPU droplet `168.144.126.176`" as the engine box; :143 claims the SPA "shows a friendly 'engine offline' banner (`/api/health` ping)". (2) Commit 5ffb750 (2026-06-25, PR #117) states verbatim: "That droplet has been decommissioned (its data archived to gs://khelsutra-rally-corporus/archive/droplet-claude-do-rally-test-20260625/)... Cloudflare is now the single canonical host" ? it only removed .github/workflows/parity.yml + site/scripts/parity-check.sh, touching neither deploy doc. (3) grep -i 'retired|decommission' over all *.md in the repo = 0 matches, so no doc records the retirement. (4) deploy/GPU_VM_SERVING.md:24 still says "the droplet stays as a hot fallback"; :37-40 instruct sourcing the CF-Access AUD from "the droplet's /srv/khelsutra/config.json" and the tunnel token from "systemctl cat cloudflared" on the droplet ? and that file was last edited 2026-06-29 (ca8bfcc #119), FOUR DAYS AFTER the decommission, without fixing this, so NOT already-fixed. (5) grep over web/src: zero references to /api/health anywhere (only FfmpegBanner.tsx exists as a banner; SetupWizard.tsx:84-142 has an offline message driven by a capabilities fetch, not a /api/health ping), confirming the :143 rot. (6) gh: issues #114 (allowlisted email couldn't sign in, real demo 2026-06-23) and #97 (split-origin breaks CF Access ? single-origin needed) are both OPEN, contradicting "Status: LIVE ... only a rotated Gemini key + a browser OTP login remain". Concrete failure: this is a docs-as-memory, multi-session project ? the next serving session following GPU_VM_SERVING.md \$0 is blocked at prerequisites trying to SSH a nonexistent box for secrets, and DEPLOY_ALPHA.md's LIVE status + "hot fallback" cutover-safety claim would drive wrong go-live/rollback decisions for the actual alpha. P1 is honest for the primary serving runbook; effort S (one doc PR) is right. The doc PR itself is not owner-gated; only the Cloudflare-dashboard CNAME/Access cleanup is, and the proposed fix already scopes that as a note.

132

133 ### R1-10 [P1/S] hygiene ? sports-data-collector

134 **Stray nested clone sports-data-collector/sports-data-collector/ pollutes tooling; safe to delete**

135 - anchor: `sports-data-collector/sports-data-collector/:` · tracked in: ? · finder: sdc:audit

136 - evidence: Untracked dir is a FULL second clone of the same repo: remote = <https://github.com/avidullu/sports-data-collector.git> (pre-org-move URL; parent origin is <https://github.com/Khelsutra/sports-data-collector.git>). HEAD = 031e410 'feat(annotation): richer Roora schema (#29)' (~Jun 19; working-tree files mtime Jun 19 21:38, .git mtime Jun 29 14:41 from a later fetch that moved its origin/master to a152cf5). Verified zero unique work: `git merge-base --is-ancestor 031e410 HEAD` in the parent succeeds, `git status --short` clean, `git stash list` empty, only branch is master. Size ~1.7 MB (811 KB .git). It contains its own tests/, src/, .github/, and data/sports_metadata.db (tracked at that commit, unmodified). Tooling pollution measured: `ruff check .` from repo root reports 39 errors vs 24 when scoped to src/tests/cleanup.py ? the extra 15 come from the nested clone; bare `pytest` rootdir collection and setuptools package discovery would also pick it up.

137 - why it matters:

138 - proposed fix: Delete the entire nested directory (rm -rf sports-data-collector/sports-data-collector/). Nothing in it is unique: HEAD is an ancestor of current master, tree is clean, no stashes/branches. Root cause is almost certainly a `git clone` run with cwd already inside the repo (~Jun 19); worth adding `sports-data-collector/` to .git/info/exclude only if deletion is deferred. READ-ONLY audit ? not deleted; owner or a follow-up session should remove it.

139 - verifier notes: Sharper failure scenario than the finder's: beyond the +15 phantom ruff errors, both tests/ dirs share module basenames with no __init__.py, so bare `pytest` from repo root fails at collection with import-file-mismatch errors ? i.e., the owner's pre-LGTM gate ("full test suite green", "ruff check . clean") is actively corrupted for any local session until the dir is deleted; agents using root-wide Grep/Glob also risk editing the stale nested copy. Two cautions for the fixer: (a) parent working tree currently has an unrelated modified .gitignore (adds `artifacts/` ? likely sibling/owner WIP per global instructions; do not clobber or commit it while deleting the nested dir); (b) nested .git mtime is Jul 2 08:18 (today) ? something (likely the finder's fetch or background maintenance) touched it, but no new local work exists (origin/master..master empty), so deletion remains safe.

```

140 - verifier reasoning: Every material claim reproduced against the current tree. (1)
Nested clone exists: C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector/sports-data-
collector/ is a full checkout (.git, src/, tests/, .github/, data/, cleanup.py; dir mtime Jun 19
21:38) and parent `git status --short` shows it untracked (`?? sports-data-collector/`). (2)
Remotes match the claim: nested `git remote -v` = https://github.com/avidullu/sports-data-
collector.git (pre-org-move), parent origin = https://github.com/Khelsutra/sports-data-
collector.git. (3) Zero unique work, personally re-verified: nested HEAD = 031e410
"feat(annotation): richer Roora schema (#29)"; `git merge-base --is-ancestor 031e410 HEAD` in
the parent (HEAD addcd206) succeeds; nested `git status --short` clean, `git stash list` empty,
only branch master, and `git log origin/master..master` empty (no unpushed commits). Size
matches: du = 1.7M total, 811K .git. (4) Tooling pollution reproduced exactly: `ruff check .
--no-cache` from repo root = "Found 39 errors" vs `ruff check src tests cleanup.py --no-cache` =
"Found 24 errors" ? the 15-error delta is the nested clone. No guard exists: pyproject.toml
(lines 1-41, entire file) has no [tool.ruff] or [tool.pytest.ini_options] section, and no
pytest.ini/setup.cfg/tox.ini/ruff.toml anywhere; nested dir absent from .gitignore and
.git/info/exclude. (5) The pytest claim is structurally worse than stated: tests/ and sports-
data-collector/tests/ contain identically-named modules (test_batch_preflight.py, test_cli.py,
test_config.py, test_cvat_parser.py, ...) and NEITHER has __init__.py, so a bare `pytest` from
root would hit "import file mismatch" collection errors ? breaking the owner's mandated full-
suite pre-LGTM gate locally. Not owner-gated: pure local hygiene, no
serving/training/licensing/spend/ToS surface. Fix (rm -rf the nested dir) is safe and correctly
scoped given the ancestor/clean/no-stash/no-unpushed proof.
141
142     ### R1-11 [P2/M] ci-infrastructure ? badminton-highlight-indexer
143     **ci.yml/nightly.yml lane drift predicted by #384 has now materialized (link-check
missing from nightly, timeout divergence, duplicated coverage floor)**
144     - anchor: `.github/workflows/nightly.yml:12` . tracked in:
https://github.com/Khelsutra/badminton-highlight-indexer/issues/384 . finder: engine:ci-tests
145     - evidence: ci.yml:53-63 added a link-check job (commit af1ccbe, PR #402, 2026-06-30)
that nightly.yml does not mirror; nightly.yml:12-16 still claims 'every OFFLINE guard job from
ci.yml is mirrored here' and its notify-on-failure needs list (nightly.yml:234) has no link-
check; timeouts have also diverged (license-scan: ci.yml:187=15min vs nightly.yml:171=10min;
build-artifact: ci.yml:214=30min vs nightly.yml:197=20min); coverage floor 70 is a duplicated
literal (ci.yml:145, nightly.yml:139) that nightly.yml:22-23 itself flags as not single-sourced

```

6. **Name the eval?serve lesson "pipeline distribution skew"*** ? a citable paper "lesson."

**Discipline reminder:** owner approval before starting any owner-gated item; one PR per step;
babysit the PR (poll/fix/reply) until merge observed, *then* advance.

```

Prioritized next steps

```

1. **[owner, in progress] GROW THE GOLDEN CORPUS** ? the single highest-leverage move; every
lever below feeds on it.
  Priority order for new videos: **(a) multi-court badminton** (the target distribution AND
where the ship target
  lives), **(b) ?3 matches per new sport ? table tennis first** (WASB transfers at F1 0.909;
pickleball labels are
  corpus-gold but not trainable until a clean MIT/Apache ball detector exists), (c) capture
variety per
  `VIDEO_RECORDING_GUIDELINES.md`; **adult sessions only for the training pool** (consent
guardrail). Per video:
  label ? `curate import-local --normalize --license Proprietary --fps <true fps>` ? re-run the
Gen-0 harness.
  The paired sign test needs n: at n=10 with 9 wins, p?0.011 ? significance is reachable this
month.
2. **[owner decision] Set the ship-gate target** ? now informed: floor = heuristic 0.480
(necessary), **multi-court
  reference = wrapper 0.66** (the number that makes the owned model worth serving), clean-
footage ceiling = 0.93

```

(not the target ? Gemini serves that tier). Suggested shape: "LOVO F1@tIoU0.5 ? 0.70 on multi-court folds with paired-sign $p < 0.05$ vs heuristic" ? owner to ratify/adjust.

docs/NEXT_STEPS.md:29:11. ****Multisport**** (table-tennis first, then pickleball).

docs/NEXT_STEPS.md:67:****Leaving (bulky / M2 ? no start without owner go):**** ActionFormer (M0.4), event-index DB migration (M0.1), Gemini-silver purge (M0.3), cost-to-Gen-2 benchmark + ByteTrack deprecation, multisport, repo rename, PMF execution.

docs/NEXT_STEPS.md:136:4. ****Multisport thread:**** ingest Roora pickleball/TT CSVs (``import-local --normalize``); merged-prototype LOVO across

docs/RALLY_DETECTION_QUALITY_REPORT.md:407:- ****Multisport clean detectors**** ? table-tennis WASB transfer is unverified on our footage; pickleball

21. assistant (2026-07-02T04:48:35.406Z)

Now let me check how the repo loads canonical CSVs and whether tests reference tracked data files.

27. assistant (2026-07-02T04:49:17.735Z)

Now let me create the isolated worktree from origin/master, and stage the GCS upload in parallel.

28. user (2026-07-02T04:49:20.908Z)

Preparing worktree (new branch 'chore/roora-golden-labels')
branch 'chore/roora-golden-labels' set up to track 'origin/master'.
HEAD is now at adcd206 fix(db): set SQLite busy_timeout so concurrent writers wait, not error (P9) (#53)
chore/roora-golden-labels
adcd206 fix(db): set SQLite busy_timeout so concurrent writers wait, not error (P9) (#53)

29. assistant (2026-07-02T04:49:30.487Z)

Worktree ready on origin/master. Now Part A ? stage the GCS payload (mirroring the Annotation Setup relative structure, excluding videos).

30. user (2026-07-02T04:49:38.447Z)

Remove-Item on system path '/E' is blocked. This path is protected from removal.

31. user (2026-07-02T04:49:54.824Z)

Exit code 1
robocopy1 exit: 1
robocopy2 exit: 1
739 files, 5731641 bytes total

32. assistant (2026-07-02T04:50:05.608Z)

Staging succeeded: 739 files, 5,731,641 bytes, no videos. Now check the destination prefix is empty, then upload.

33. user (2026-07-02T04:50:09.950Z)

gs://khehsutra-rally-corpus/archive/droplet-claude-do-rally-test-20260625/

34. assistant (2026-07-02T04:50:18.598Z)

Destination is free. Uploading now (739 small files ? may take a few minutes).

35. user (2026-07-02T04:50:32.658Z)

```
"""Tests for the CVAT rally adapter (src/parsers/cvat/rally_cvat.py).
```

```
The adapter's whole reason for existing is to (a) recompute rally time from the
box FRAME RANGE at the true fps ? ignoring the vendor's wrong start/end_time
attributes ? and (b) report content defects rather than silently fixing them.
These tests pin both behaviours, plus the end-to-end hand-off to import-local.

Golden rally labels (Roora pilot, June 2026)

Human-verified golden rally labels produced from the ****Roora vendor annotation pilot**** (badminton pilot review 2026-06-06; pickleball & table-tennis review 2026-06-10). These are the corrected/curated counterparts to the ***as-delivered*** vendor parse tracked at `[data/roora_badminton_canonical.csv](../roora_badminton_canonical.csv)`, and they back the recorded multi-sport transfer results (table-tennis WASB F1 0.909; pickleball 0.308 ? see the indexer's ``docs/NEXT_STEPS.md`` / ``docs/RALLY_DETECTION_QUALITY_REPORT.md``).

```
| File | Video | What it is |
| --- | --- | --- |
| `golden_labels_badminton.csv` | Sample Long Video - Baadminton.MP4 | Frame-by-frame human review of the vendor's badminton delivery. The `status` column records the verdict per rally: `CONFIRMED`, `needs_review`, `CORRECTED-*` (start/end/ending fixed vs the vendor CSV), `MISSED-added` (rallies 7.5 and 16.5, absent from the delivery). Two rows intentionally have open fields (7.5 has no end time; 16/16.5 have no shot counts) ? this is a review-corrections record, not an import-ready canonical CSV: `load_canonical_csv` skips the non-integer `rally_number` rows (7.5/16.5) by design. |
| `pickleball_rallies.csv` | Video 2 - Pickleball.mp4 | Golden rally set in the canonical per-rally CSV schema (6 rallies). Loads cleanly via `src.parsers.cvat.rally_cvat.load_canonical_csv`. |
| `tabletennis_rallies.csv` | Video 3 - Tabletennis.mp4 | Golden rally set in the canonical per-rally CSV schema (6 rallies). Loads cleanly via `load_canonical_csv`. |
```

Provenance & full archive

These CSVs are the distilled work product of the paid Roora pilot. The complete pilot record ? raw CVAT exports for all three sports (per-frame box geometry the canonical CSVs discard), the ``rally_review.csv`` calibration sheet, the pilot review reports (MD/PDF), and the annotation brief/guide ? is archived at:

```
...
gs://khehsutra-rally-corpus/archive/roora-pilot-review-20260606/
...
```

(739 objects, ~5.7 MB; mirrors the local `Annotation Setup/` relative layout:
`Archive/Roora Pilot Review - 6 June 2026/` minus the videos,
`Trajectories/roora/`, `golden\_labels\_badminton.csv`, `rally\_review.csv`.)

The three pilot **videos** are deliberately **not** in the archive ? byte-identical
copies live on the owner's Google Drive under
`Sharing/Annotation Videos/Pilot Videos/`.

Guarded by `tests/test\_golden\_labels\_data.py` (schema + key corrections stay
intact).

```
"""Guard the git-versioned Roora golden label CSVs (data/golden_labels/).
```

```
These files are the human-verified record of the paid Roora annotation pilot  
(the only other copy is the GCS archive at  
gs://khelsutra-rally-corpus/archive/roora-pilot-review-20260606/). The tests  
pin (a) that the multi-sport goldens stay loadable through the canonical CSV  
loader with zero skipped rows, and (b) that the badminton review record keeps  
its key human corrections (they exist nowhere upstream ? the as-delivered  
vendor parse in data/roora_badminton_canonical.csv does NOT contain them).  
"""
