Transcript

1. user (2026-07-02T08:10:37.470Z)

Hi. Please use the khelsutra-guru directory as the project root folder, sync all the sub repos to remote head and can you review and decide the fate of the PRs <https://github.com/Khelsutra/badminton-highlight-indexer/pulls> except the #390 on whether you can take them over

2. assistant (2026-07-02T08:10:46.977Z)

I'll start by getting oriented. Let me look at the khelsutra-guru directory structure, check for a session handoff, and see what sub-repos exist.

3. user (2026-07-02T08:10:49.193Z)

```
1      # Memory Index
2
3      ## ? Start here
4      - [Working root = khelsutra-guru (multi-repo)](working-root-khelsutra-guru.md) ? **owner
directive 2026-06-29:** OPEN `Projects\khelsutra-guru` as the UI project (5 git repos), switch
sub-repo per task. Memory store MIGRATED to the khelsutra-guru key (Option B); badminton-
highlight-indexer is no longer the startup anchor. Detail + migration-verification note
[[working-root-khelsutra-guru]].
5      - [? rally finding-B promotion (P2b) + launch signoff](next-session-rally-finding-b-
promotion.md) ? **freshest, 2026-06-29.** Fixes A/B/C MERGED (`0c9c693`); B behind
`inactivity_temporal_density` (default-OFF no-op). ? NEXT = run golden A/B at SERVED, promote-
or-reject via `promote_if_served_safe`, then full suite + GO/NO-GO launch report (recommend,
don't decide). Runbook `docs/RALLY_DETECTION_FIXES_PLAN.md` S8 Q2; detail [[next-session-rally-
finding-b-promotion]].
6      - [? multi-shuttle / prominent-court detection](next-session-multishuttle-rally.md) ?
design journey (2026-06-19/20). Multi-track + court-aware selector measured vs GOLDEN: does NOT
beat single-track baseline ? NO PR; it's a targeted lever, not an F1 win. ? NEXT = the verdict-
flipping experiment: a separable-adjacent-court golden clip (`Boxhill_Doubles`, owner GPU) w/
court-membership-only selection. Detail [[next-session-multishuttle-rally]]. *(Design/scratch.)*
```

7 - [? batteries-included downloadable app](next-session-packaging-app.md) ? packaging track. ? P3+P2b+P2c DONE 2026-06-22 (engine #310/#312, khelsutra #88) ? v1 LIGHT FEATURE-COMplete; only OWNER steps remain (clean-box acceptance + ffmpeg UX). North-star (native-WASB/training/annotation) future + gated. Doc `docs/PACKAGING\_PLAN.md` §7; detail [[packaging-app-plan]].

8 - [? khelsutra UX/l10n/runnable-tool](next-session-ux-localization.md) ? refreshed 2026-06-22. Tool BUILT + localized (6 langs); ALPHA LIVE + real-use-proven at `https://api.khelsutra.guru` (single-origin). ? NEXT = 13-issue triage backlog: async `api/compile` (#329, kills the 524), M7 Cloud-Run L4 GPU, NSFW litmus (#332) + UX/obs polish; launch gate needs native-speaker review. Full ramp-up in [[current-state]] SESSION WRAP. *(Engine/serving track = own [session-handoff](session-handoff.md)).*

9 - [? golden regression fixtures (optional)](next-session-golden-fixtures.md) ? track COMPLETE 2026-06-22 (8 PRs); clean clone runs rally-seg regression (synthetic + 6 real fixtures `fx\_r0X`), cross-OS + leak-guarded. ? NEXT (optional): (1) M4 quality-floor on real fixtures; (2) deferred video-name rename (before open-sourcing); (3) 01 protobuf / 02 key-gated. Detail [[next-session-golden-fixtures]].

10 - [? Studio media lifecycle (ingest?store?annotate?train)](project-studio-media-lifecycle.md) ? **STORAGE HALF COMPLETE 2026-07-01.** Full "add a video ? store in chosen medium (S3/GCS/Drive/local) ? free-space checked ? appears in my videos" is END-TO-END: P2 engine free-space (#407), P3 capabilities-storage (#408), P4 `POST /api/assets` (#409), P5 SPA medium picker (khelsutra #137) ? all MERGED. Annotate-in-UI (P6-P9) already shipped. 5 screencasts (04 = store-in-my-medium). **? ONLY owner-gated remains: P10/P11 (corpus promotion + train/reeval, DEFERRED D13) + `L` beta follow-ups ? do NOT build without owner lifting the gate.** Doc `khelsutra/docs/STUDIO\_MEDIA\_LIFECYCLE.md`; detail [[project-studio-media-lifecycle]].

11 - [Current state](current-state.md) ? **live micro-checkpoint** (updated every checkpoint): open PRs, what just landed, next steps, open decisions. **Read this first.** Now LIVE-only (handoff + today's checkpoints); kept read-first-short.

12 - [Current-state archive](current-state-archive.md) ? chronological checkpoint history (2026-06-06 ? 06-18, 96 blocks) split out of current-state 2026-06-19. Deep history only; NOT read each session.

13 - [Session handoff](session-handoff.md) ? current state · next steps · open decisions · ramp-up kit. AUTO-refreshed at meaningful checkpoints (PR merged, key decision, phase shift, session wrap) ? see working-agreement-checkpoints staleness tripwire.

14 - [Code map artifact](code-map-artifact.md) ? for CODE/architecture ramp-up, read `docs/CODE\_MAP.md` FIRST (dense anchor-rich map; replaces a file crawl). How to regenerate it.

15 - [File-placement conventions](file-placement-conventions.md) ? **where new files go** (scripts/ vs backend/eval/ vs tools/ vs scratch/ vs training/ vs artifacts/ ?); **read before committing a new file.** Authoritative table = `docs/CODE\_MAP.md` §0 (PR #138); scratch/gitignored (#136).

16

17 - [Working agreement: attribution](working-agreement-attribution.md) ? never assert fabricated facts; NEVER invent a provenance (a discussion/review/source that didn't happen). The silver-bullet rule.

18 - [Working agreement: checkpoints](working-agreement-checkpoints.md) ? user prefers frequent small PRs + a Claude-consumable current-state file updated at every micro-checkpoint.

19 - [Feedback: tail long-job logs](feedback-tail-long-job-logs.md) ? proactively tail progress/summaries from long-running background jobs while they run, not just the final result.

20 - [Working agreement: merging](working-agreement-merging.md) ? owner authorized Claude to MERGE its own good-engineering-fix PRs on verified-green CI (2026-06-12); product/strategy/licensing stay owner-gated.

21 - [Working agreement: tracked project docs](working-agreement-tracked-project-docs.md) ? substantial design/project work gets a **tracked project doc** (template + §7 progress tracker + definition-of-done); freeze ? track across sessions ? mark done ? archive. Owner-loved framing (2026-06-16); codified in `CLAUDE.md` + `docs/PROJECT\_DOC\_TEMPLATE.md` (PR #186).

22 - [Doc-status register + archival due-diligence](doc-status-register.md) ? owner directive (2026-06-21): `docs/DOC\_STATUS.md` is the **living doc-lifecycle register** ; **archive foundational docs only AFTER honestly updating them** (verify?flip status+completion note?update refs?keep lineage?move). Worked example = DECOUPLED #270. Codified in `CLAUDE.md` archive policy.

23 - [Lesson: verify engine-surface before scoping](lesson-verify-engine-surface-before-scoping.md) ? **anti-spiral (2026-06-21):** before scoping a doc's `[gap]`/`net-new`/"X-only" engine claim as work, RE-VERIFY against engine code at a cited `file:line` (engine drifts between sessions). `[verified]` without a `file:line` = a hypothesis. Born from B-P1; docs fixed ? khelsutra #55.

24 - [Launch Report convention](launch-report-convention.md) ? owner directive

(2026-06-17): EVERY default-config/quality-bit flip ships with a documented **Launch Report** (total-quality-impact table on both rulers + over-seg guard + honest caveats), recorded for posterity BEFORE the flip merges. Born from the Gate-A #146 flip that regressed (#151). Pairs with [[eval-dual-set-regression]].

25 - [Feedback: launch quality bar](feedback-launch-quality-bar.md) ? approaching launch (2026-06-20): tightly **isolated one-item PRs + rising coverage**, and **serious observability** (full log analysis across every NEW code path; correlation/job IDs; loud failures, no silent drops). Make Observability a first-class doc section + DoD item.

26 - [Review: trust CI, don't re-run it](review-trust-ci-over-rerun.md) ? owner feedback (2026-06-25): **don't re-run the exact CI checks locally during review** (CI already ran them green on that commit ? wasted time); rely on green CI + a documented PR **Verification** section, and spend local effort only on what CI can't cover (merge-safety, env-noise vs real defect, findings, machine-side paths). Refines the global pre-LGTM gate. Proposed the Verification convention on #378 (+offered a PR template).

27 - [Review: sign-off policy](review-signoff-policy.md) ? owner's settled rule (2026-06-25): **sign off (written LGTM) on pure-refactoring / zero-behavior PRs once CI is green** (confirm semantics-free via AST-identity, not re-running CI); **HOLD logic/behavior changes for the owner** unless authorized per-PR. Red CI blocks sign-off regardless. gh=avidullu ? written LGTM, never a formal Approve.

28 - [Gotcha: shared-checkout branch collisions](gotcha-shared-checkout-branch-collisions.md) ? spawned tasks + sibling sessions SHARE this checkout; **branch from `origin/master` explicitly, re-verify HEAD before commit, stage explicit paths, serialize repo writes.** The #116/#117 collision (owner upset). Global form in ~/.claude/CLAUDE.md.

29 - [Lesson: branch rename closes its open PR](lesson-branch-rename-closes-open-pr.md) ? renaming the head branch of an OPEN PR **closes** it (does NOT retarget); cost PR #393 ? roll-forward #394 (2026-06-29). Don't rename a branch with an open PR; rename before opening, or plan to re-create.

30 - [Gotcha: long GPU/WSL runs](gotcha-long-runs-gpu-wsl.md) ? running the WASB pipeline E2E on a big 4K video: Modern Standby kills it (keep-awake), cv2 extraction is the bottleneck (ffmpeg pre-extract), proxy-index/4K-stitch recipe + how to observe each phase.

31 - [GCP Ops Agent: always enable](gcp-ops-agent-enable.md) ? owner directive (missed TWICE): every rally GPU VM needs the Ops Agent for Observability/GPU graphs ? **3 pieces** (logging+monitoring APIs ON + SA metric/log-writer roles + agent install via startup-script). BAKE into `deploy/gcp` provisioning so it's automatic.

32 - [GCP VM: always DELETE, never just stop](gcp-vm-always-delete.md) ? owner cost rule (2026-06-20): a STOPPED VM still bills its disk (~\$34/mo for 200GB pd-ssd); **DELETE** ? \$0 (boot disk autoDelete=true). `teardown.sh` now defaults to `delete`; audit `gcloud compute disks list` for orphans. DO droplet `claude-do-rally-test` (~\$24/mo) is a shared testbed (owner-gated).

33 - [Compute = GCP only; DO dropped](compute-stack-gcp-only.md) ? **standing decision** (ADR-013, 2026-06-20): **GCP is the SOLE compute stack (training + serving)**; **DigitalOcean dropped for compute** (GPU not enabled/credit-funded; Paperspace subscription-gated). Provision via `deploy/gcp` only; don't relitigate DO/Paperspace without a new ADR; \$200 DO credits ? non-compute only.

34 - [Storage bucket config requirements](storage-bucket-config-requirements.md) ? owner directives (2026-07-01): bucket names via ONE config (no hardcoded literals) . split by 3 data families (user videos vs golden/dev vs scratch ? a compliance boundary, D1) . per-deployment/per-region buckets (e.g. user videos per continent). Audit: runtime single-source ?; deploy/gcp scripts had duplicated corpus/nightly literals under TWO env-var names ? **FIXED** (engine #410): `deploy/gcp/buckets.env` sourced by all 7 scripts, corpus unified under `RALLY\_CORPUS\_BUCKET` (legacy names = back-compat aliases), `.gitignore` `!` negation so the no-secret env file is tracked. **Per-region = env override, no code change.** Detail [[storage-bucket-config-requirements]].

35 - [GCS = corpus source of truth](gcs-data-source-of-truth.md) ? **owner goal** (2026-06-22): **run ALL train+infer from cloud, ALL data in `gs://khelesutra-rally-corpus`.** **Pull from the bucket, not C:/F:/Drive.** Map = `docs/DATA\_IN\_GCS.md`; cloud engine built (`backend.worker infer|train` by URI). Gap = ~25 MB corpus metadata local-only + trivially migratable. Pairs [[compute-stack-gcp-only]].

36 - [Cache-hygiene policy](cache-hygiene-policy.md) ? retention table (purge frames/staged vs keep CSVs/DB/reels) + the shipped tooling: self-cleaning runners (keep_frames default false), tools/cleanup_caches.py (dry-run-first), disk guard, SessionStart nudge hook. The `for e in \*` WSL footgun.

37 - [Tool: trim_video.py](tool-trim-video.md) ? reusable `scratch/trim\_video.py` for keyframe-aware LOSSLESS video trims (drop first/last N sec), **--exact** re-encode with NVENC?libx264 fallback. Reach for it instead of hand-rolling ffmpeg trims.

38 - [Decision-rigor norm](decision-rigor-norm.md) ? ****NUMBERS INFORM, FOUNDATIONS DECIDE****
(owner directive 2026-06-14, set by the Gate-A flip). Every signal/architecture change gets
ablation-layer rigor (per-signal marginal ?F1 + honest CI/sign-test) AND a foundational lens
(extensible/orthogonal/reversible), never numbers alone. Ties [[weak-signals-retained]] +
[[paper-coauthor-aim]].

39

40 **## Project: rally segmentation pipeline**

41 - [Candidate segments & fine-tuning](candidate-segments-finetuning.md) ? why raw
detector candidates are persisted (detector-agnostic table); golden-eval-set goal

42 - [TrackNetV4/WASB via WSL2](tracknet-wasb-wsl2-decision.md) ? self-hosted shuttle
trajectory models (not LLM APIs); WASB/TrackNetV3 = MIT, commercial-clear

43 - [Collector?indexer bridge](collector-indexer-bridge.md) ? 4-phase plan to train/eval a
generic temporal rally segmenter; Phases 1?2 done, 3 in progress, 4 next

44 - [Golden-set vendoring](golden-set-vendoring.md) ? generate golden rally labels via
3rd-party vendors (Bangalore-local) + extensible regression flow; Roora selected for a 3-sport
pilot, guideline + collector ingestion built, GS-1/2/4 landed, GS-3 + gold key pending

45 - [Roora guidelines Drive doc](roora-guidelines-drive-doc.md) ? the CANONICAL vendor-
facing Brief+Guide Google Doc (supersedes v3/v5/v6/v7 Drive copies; v7 anomaly RESOLVED
2026-06-12); TODO markers still to fill before sending

46 - [Audio (E1) findings](audio-e1-findings.md) ? quantitative gains/losses of the
classical-onset audio cue (recall 100% but discrimination ~2.2x, band-pass null) + reusable
lessons for adding the NEXT signal. Audio NOT adopted for fusion; detector kept (PR #35).

47 - [Weak signals retained](weak-signals-retained.md) ? owner directive: non-significant
cues (person/audio/court-bounds/future ****shuttle-drop****) stay ****default-OFF + retained**** as
scorer feature columns (no special-casing) for a growing (Roora) corpus ? never deleted on a
small-n null. Measured: person ?F1 ?0.021, +audio +0.079 (both CIs span 0 at n=6).

48 - [Eval boundary tolerance](eval-boundary-tolerance.md) ? owner directive (2026-06-16):
rally scoring must tolerate the ~1?1.5s ****service-window**** start-fuzziness ($\pm 2s$, not strict tIoU
0.5 which only allows $\pm 1.9s$ on a 5.7s rally). KEY measured finding (mp2+GX010128, n=2): local's
|?start|?Gemini but |?end| 2?3x worse ? ****the gap is rally-END detection****, not generic boundary
precision ? next lever (R2 metric ? R4 end-rule). Reusable `scratch/at\_par.py`.

49 - [Golden corpus grew 9?15](golden-corpus-grew-9-to-15.md) ? ****2026-06-22:**** #316 GCS
migration restored the original-6 single-court labels ? local golden eval set now ****15 clips****
(was 9). Trips 9-clip-pinned litmus (re-grounded PR #322); check corpus size before suspecting a
code regression. Pairs [[eval-dual-set-regression]] [[gcs-data-source-of-truth]].

50 - [Eval dual-set regression](eval-dual-set-regression.md) ? owner directive
(2026-06-16): keep a ****RAW eval set**** + a ****GROWING GOLDEN-finalized set**** (promote raw?golden
when at-par) + a separate ****golden TRAINING set****; every quality launch must NOT regress on
EITHER eval set. The ablation layer A/Bs these; wire dual-set aggregate into `run\_regression.py`
when R2 lands.

51 - [Decision-snapshot regression](decision-snapshot-regression.md) ? ****tracked project,**
decisions LOCKED, #383 merged (2026-06-25). ****Deterministic **quality-neutral proof****:
freeze+compare DECISION output (segments+stitch plan) off a cached trajectory in CI ? lets a
genuine refactor be auto-called quality-neutral (NOT a reel-MD5). ? next = \$7 P1. Doc
`docs/DECISION\_SNAPSHOT\_REGRESSION.md`.

52

53 **## Packaging / distribution**

54 - [? Next session: packaging app](next-session-packaging-app.md) ? ****the**
icebreaker/handoff to resume this track** (read first; also under ? Start here).

55 - [Batteries-included app plan](packaging-app-plan.md) ? downloadable Python app (local
web service for inference/training/annotation). ****11 PRs merged 2026-06-21/22**** ? LIGHT-tier
bundle-ready (`pip install`?`indexer --app`?bundled SPA, torch-free). Doc
`docs/PACKAGING\_PLAN.md` \$7. ****01+02 LOCKED**** (cross-platform, LIGHT-first WASB-complete north
star); 03+ gated. Pairs [[ui-driven-cloud-serving-gap]]. Don't relitigate locked calls.

56

57 **## Monetization (hosted API)**

58 - [Monetization plan](monetization-plan.md) ? hosted video?highlights API on a GPU VM;
licensing & per-video cost are first-class; user is Bangalore-based

59 - [Monetization research status](monetization-research-status.md) ? audit done:
Ultralytics AGPL swapped out (PR #8); MonoTrack/YOLO-NAS weights avoided; codec=watch; full
report in docs/

60 - [Machine-pooling idea](machine-pooling-idea.md) ? owner "food for thought"
(2026-06-20): pool GPU machines (queue-on-one-host vs Cloud-Run scale-to-zero) instead of spin-
up/kill per task ? born from a single-GPU-slot collision between two sessions (quota=1). Infra-
track design item.

```

61      - [UI-driven cloud-serving gap](ui-driven-cloud-serving-gap.md) ? **owner directive
(2026-06-21): cloud highlight flow must be UI-driven + ALPHA-SHAREABLE, not SSH/CLI; surface
compute options (local vs cloud) in UI at start.** ? The compute-picker + real Cloud Run L4 GPU
e2e validation LANDED 2026-06-22 ? see [[cloudrun-gpu-serving-gotchas]].
62      - [Cloud Run GPU serving gotchas](cloudrun-gpu-serving-gotchas.md) ? **reusable knobs to
run the WASB worker on Cloud Run L4 GPU** (region?Mumbai · `--no-gpu-zonal-redundancy` · GCS
volume-mount weights · PowerShell-not-Bash `/mnt` flags · `skip_ai_handoff=true` no-key ·
digest-pin?`jobs update` · `[storage-gcs]` in image · control plane needs google-cloud-
run+ADC). Verified 2026-06-22 (`artifacts/cloudrun_e2e_validation/`).
63      - [khelsutra site droplet parity](khelsutra-site-droplet-parity.md) ? **RETIRED
2026-06-25.** DO droplet `claude-do-rally-test` (dual-purpose site mirror + alpha engine) kept
drifting from CF ? owner retired it: data archived to GCS+local, droplet deleted ($0), monitor
removed (khelsutra #117). Follow-ups: `api.` CNAME/CF-Access cleanup. Pairs [[compute-stack-gcp-
only]] [[ui-driven-cloud-serving-gap]].
64
65      ## Forward-looking
66      - [Sibling internship repo](sibling-internship-repo.md) ? khelacharya shot-intelligence
layer builds ON TOP of our rally segmentation; kept off master at branch level (NOT a separate
GitHub repo ? corrected 2026-06-06)
67      - [Paper co-author aim](paper-coauthor-aim.md) ? **standing side-aim**: co-author a
paper on "local, cheap & efficient rally detection via multiple clever ideas". Keep
`docs/QUALITY_ITERATIONS.md` as the ablation-ready empirical backbone; honest measured results
ONLY.
68
69      ## Project: muneem-ai (SEPARATE root from khelsutra-guru)
70      - [muneem-ai workspace](muneem-ai-workspace.md) ? `C:\Users\avidu\Projects\muneem-ai` =
3 repos (**muneem** Python local-first finance bookkeeper + **node-text-detection**
Node/Tesseract OCR + **Email-Mining** prior art). Per-session focus switch (2026-07-01);
persistent root stays khelsutra-guru. muneem CI = ruff(len 100)/mypy/pytest-cov80, vendored
`ruff-bin/ruff.exe`. Detail [[muneem-ai-workspace]].
71      - [muneem grocery-replenishment SENSOR](muneem-grocery-replenishment.md) ? **GR.0?GR.5
BUILT + MERGED to main 2026-07-01 (9 PRs #100?108).** Loop = `grocery ingest`/`ingest-receipt
--store` ? `pantry due`/`pantry compare`. A depletion **sensor** (owner: "as a sensor, not a
delight"): per-item history (`purchase_items`, migration v8) ? slow-staple run-out + confidence
+ cheapest-store; 2nd source via OCR/text receipt. Built on 206 real BigBasket line-items from
**avidullu.svp@** Gmail. GR.5 = deterministic structural canonicalization; **the LEARNED
Tier-1 is the ONLY unbuilt piece ? parked under $8.5 (owner-gated).** Detail [[muneem-grocery-
replenishment]].
72

10     # Session handoff ? badminton-highlight-indexer (rename PENDING) + siblings: sports-
data-collector, rally-annotator, sports-obsreport
11
12     **Last updated:** 2026-07-02 (**health-remediation P5 checkpoint** ? engine #427 merged;
remote-input scratch dirs are cleaned after process/compile/assets/CLI/cloud marker reads, with
remote reports kept durable). Older serving/alpha and review-automation history remains below
for background, but the active pickup is the 2026-07-02 health plan section.
13
14     > **Read order:** this file ? [[current-state]] top ? `badminton-highlight-
indexer/docs/KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md` $7 ? engine PR #423 ?
`docs/NEXT_STEPS.md` ? `docs/DOC_STATUS.md`.
15
16     ## ? You are here (2026-07-02)
17     **Health-remediation docs-only PR merged:** [engine
#423](https://github.com/Khelsutra/badminton-highlight-indexer/pull/423) merged to `master` as
`e517475`, adding the tracked project plan and registering it in the docs index/lifecycle files.
Verification run: `python -m tools.check_md_links`; `git diff --cached --check`; GitHub CI all
green including Full test suite (offline, mocked). No runtime code changed.
18
19     **Post-sync repo heads:** engine `19ebe5a`, khelsutra `41c9627`, rally-annotator
`ef97739`, sports-data-collector `9ce5a20`, sports-obsreport `1f72c1c`/v0.1.3`. `sports-data-
collector` still has a pre-existing dirty `.gitignore` hunk; do not clobber it.
20
21     **Wave progress:** engine [#424](https://github.com/Khelsutra/badminton-highlight-
indexer/pull/424) merged to `master` as `9523d17`, closing #340/#330. `/api/process` now reuses
existing processed play segments by content hash, stamps `compute.path="cached"`, persists
`force=true` through `jobs.params`, and keeps force reprocess on the existing destroy-after-
confirm path. Engine [#425](https://github.com/Khelsutra/badminton-highlight-indexer/pull/425)
merged to `master` as `6c767b5`; `/api/source` now fetches remote inputs once under
`output_base/source_cache`, serves later Range requests from that file, and warms annotation
proxies from the cached local source. Engine [#426](https://github.com/Khelsutra/badminton-
highlight-indexer/pull/426) merged to `master` as `c6bb4bf`; ffmpegprobe/ffmpeg calls on validators,
chunking, Gemini debug trim, audio extraction, highlight compile, and annotation proxy now have
bounded defaults (`60s` probes, `1800s` media) with env overrides and clean timeout mapping.
Engine [#427](https://github.com/Khelsutra/badminton-highlight-indexer/pull/427) merged to
`master` as `19ebe5a`; successful remote-input scratch dirs are now deleted after
`/api/process`, `/api/compile`, `/api/assets`, and CLI processing, failed remote fetch/hash
paths clean partial scratch, Cloud Run marker reads use `TemporaryDirectory`, and remote-input
reports default to durable `output/reports`. Local P5 full suite: `1569 passed, 11 skipped`,
coverage `85.15%` vs floor `70`; CI all green. Local `mypy` backend training `--no-incremental`
still fails at `backend/storage/gcs.py:31` when `google-cloud-storage` is installed ? this is
the next R1-27/P1 item, not fixed by #424-#427.
22
23     **Important audit reconciliation:** several findings are already fixed after the audit
snapshot (`R1-19`, `R1-20`, doc truth-sync, droplet-retired docs, rally-annotator DOM/locale
fixes, collector `obsreport` pin). `R1-27` is still open despite PR #422: `python -m mypy
backend/training --no-incremental` still fails at `backend/storage/gcs.py:31` when `google-
cloud-storage` is installed. `R2-8` is real as hosted-readiness, but the droplet-live premise is
stale.
24
25     **Next steps:** execute the plan one $7 row per PR. Next is the actual `gcs.py` mypy fix
(`P1` in the live tracker, though some shorthand has called it P6), then continue Wave 2 (`P6`
GDrive API streaming/safe put, `P7` Cloud Run timeout handling, `P8` upload retention). Keep
coverage at/above the repo floor. Any SPA/UI work later must include validated
screenshot/screencast evidence using the existing `khelsutra-screencast/` convention where
applicable.
26
27     ## ? You are here (2026-06-25)
28     **Review-automation + audit-completion session.** engine `origin/master` = **`0b4f492`**
```

· all CI green · **0 open PRs** · no GCP VMs · **PR-review watch loop OFF** (cancelled). NOT serving/alpha (that track is the "Earlier" block below, unchanged + owner-gated).

29 - **Repo tidy:** synced master, pruned ~92 stale local branches + 7 stale worktrees; **fixed a corrupted (UTF-16-tail) .gitignore** ? `artifacts/` ignored + `KHELSUTRA\_PRODUCT\_OVERVIEW.md` tracked (**#377**); owner un-hid the hidden `C:\Users\avidu\Projects` folder.

30 - **khelsutra site-droplet RETIRED** ([[khelsutra-site-droplet-parity]]): the dual-purpose `claude-do-rally-test`/`168.144.126.176` (marketing-site mirror + alpha engine) kept drifting from CF ? **deleted** (\$0; data archived to `gs://khelsutra-rally-corporis/archive/droplet-20260625/` + local), parity monitor removed (khelsutra #117), Node-20 actions bumped (#118). ** ? This means the prior "LIVE alpha on the droplet" in the Earlier block is **GONE** ? alpha is paused pending the Cloud-Run move; `api.khelsutra.guru` CNAME/CF-Access need cleanup.

31 - **CODE_CLEANUP_AUDIT advanced ? 3 HIGH items + infra all merged:** B2/P17 surface-Gemini-failures (**#378**) · 01/P11 Gemini remote-file GC (**#380**) · B1/P9 remove-fabricated-motion-data (**#385**); + ruff-format split (#379), audit-doc reconcile/accuracy (#375/#376), Tier-1 nightly `nightly.yml` (#381), per-job CI timeouts (#382). **Remaining audit items: D1 (split `main.py` ~1450 lines), D13 (ByteTrack?`trackers`), Phase-3 (B3/B4/B6/B7/B8/D5/D6/D8-D10/O3/O4)).**

32 - **NEW tracked project: Decision-Snapshot Regression** ([[decision-snapshot-regression]] · `docs/DECISION\_SNAPSHOT\_REGRESSION.md` · **#383 merged**) ? a deterministic **quality-neutral proof** (freeze+compare the DECISION output = segments + stitch plan off a cached trajectory; **NOT** a reel-MD5). **Decisions D1?D11 LOCKED** (D10 = double-run determinism guard, deterministic segmenters only; D11 = advisory?gating staging). ** ? NEXT = \$7 P1** (canonical snapshot schema/serializer) ? P2 (`build\_stitch\_plan`) extract ? P3 (extend `test\_golden\_fixtures` + guard). B1/#385 makes `motion` snapshot-eligible.

33 - **Review-automation patterns established** ([[review-signoff-policy]] + [[review-trust-ci-over-rerun]]): spin off **multi-agent review Workflows** (Ultracode; agents READ-ONLY) ? adversarially verify ? post synthesized findings; **sign-off policy** = LGTM pure-refactors on green (AST-identity vs master), HOLD logic/CI-infra for owner; **written LGTM only** (gh=`avidullu` = owner's own account ? GitHub blocks self-Approve); **trust green CI + a PR `## Verification` section, don't re-run identical CI checks** ? reserve local effort for what CI can't cover (AST-identity, merge-safety, env-noise-vs-real-defect, findings-actually-fixed).

34

35 ** ? Likely next pick-up:** start the Decision-Snapshot project at **\$7 P1**, or continue the audit (D1 split-main.py / D13 ByteTrack). Serving/alpha remains owner-gated (now needs the Cloud-Run move since the droplet is gone).

36

37 ---

38

39 ### Earlier ? serving/alpha track (2026-06-22/23, UNCHANGED + owner-gated; note the droplet alpha is now retired per above)

40

41 ## ? You are here (2026-06-22)

42 ** (2026-06-23 #342) ** engine `origin/master` = **`688d28f`** ? merged a small compute-path fix: `GoogleCloudRunJobClient.run\_job` now guards an unset/empty `GOOGLE\_CLOUD\_PROJECT` (was passing `Optional[str]` into `JobsClient.job\_path(project: str,?)` ? latent mypy `arg-type` seen only with `google-cloud-run` installed + a bogus `projects/None/?` path at runtime). Guard runs before the lazy SDK import (CI-testable, SDK-absent) and raises a clear `RuntimeError`; +`test\_real\_client\_rejects\_missing\_project`. Full suite 1488?, cov 85.86%, all 10 CI green, merged on green per [[working-agreement-merging]]. Follow-up doc [#345](https://github.com/Khelsutra/badminton-highlight-indexer/pull/345) (`9329473`) added the operator note to `deploy/cloudrun/README.md` Gotchas. (Originated as a spawned chip; the live cloud-toggle work above is the sibling track ? see [[current-state]] top.)

43

44 ** (2026-06-22 M11+M12) ** engine `origin/master` = **`819e395`** (past #336 M11 + #338 M12; also sibling #333 M6?/api/process, #334 Cloud-Run env, #6d3d054 SPA compute-picker) · khelsutra `origin/master` = `ba38f15` (past #96 Privacy Policy, #100). **The two Claude-doable serving-code items are DONE** (M11 flywheel skeleton #336 + M12 gdrive-api #338 ? both default-OFF/inert, adversarially reviewed, merged on green). **Claude's serving + alpha-shareable code is now complete.** ** ? THE ONLY REMAINING ALPHA STEP IS OWNER-DRIVEN: pair on the go-live** (cloudflared tunnel + CF Pages + CF Access + Gemini-key rotation per `khelsutra/deploy/DEPLOY\_ALPHA.md`) ? Claude guides, owner drives the CF dashboard/box. M11 going *live* + M9-consent need the counsel ToS/DPA inputs (the 7-pt checklist in [[ui-driven-cloud-serving-gap]] / this session). Other future engine code: M7 real cloud-serving e2e (owner

GCP spend), per-video workspace P1?P6, the rally-quality track (corpus-gated).

45

46 ****(2026-06-22 sweep)**** engine `origin/master` = ****`9b37269`**** (+ today's #316/#319/#320/#321/#322/#323) . engine ****~1428**** tests green (combined-master verified w/ corpus manifest) . ****0** open engine PRs****** . no GCP VMs. This was a cross-track maintenance sweep (worker fix, nightly scheduler, GCS-data doc, gate-A litmus re-ground, golden-fixtures backlog) ? the serving/alpha forward-plan below is unchanged. ? a sibling's redundant gate-A branch `fix/served-gate-a-regrounded-15clip` sits in the MAIN checkout; concurrency being trimmed.

47

48 ****(2026-06-21 prior)**** engine `origin/master` = **`0c0e064`**+ (past #292/#293/#294) . khelsutra `origin/master` = **`4627830`** (past #63/#64/#65) . ****no** GCP VMs (audited \$0)****** . engine **~1259** tests green.

49 *****? ALPHA-SHAREABLE SESSION (2026-06-21) ? 3 PRs MERGED; Claude's half of the owner's top priority is DONE:****

50 - ****KEY CORRECTION (anti-spiral [[lesson-verify-engine-surface-before-scoping]]):**** the handoff said "do the B-P2 SPA ingest screen + M7 Cloud Run ***service***" ? but ****B-P2** was already shipped****** (khelsutra #56, live e2e in `DRY_RUN_CUJ.md` §9) and recon showed alpha-shareable is a ****DEPLOY/AUTH**** task, not an SPA build. CORS is already env-driven; the engine needed no CORS code.

51 - ****Owner decisions (this session):**** (1) pursue alpha-shareable via topology ****i)** Tunnel-to-a-box******; (2) sub-topology = ****SPLIT**** (SPA on CF ****Pages**** + engine on `api.` ****cloudflared tunnel**** + CF Access over both ? engine `HOSTING_PLAN.md` §2), single-origin Caddy kept as the alternative.

52 - ****engine [#294](https://github.com/Khelsutra/badminton-highlight-indexer/pull/294) (`0c0e064`) ? exposure-safety boot posture:**** `backend/config/startup.py` fails fast at boot (server-only `include_exposure=True`) when `security.edge_auth_enabled` is ON but half-configured ? `EXPOSED_NO_VIDEO_ROOT` (fatal, jail unset), `EXPOSED_EDGE_AUTH_INCOMPLETE` (fatal, CF team/AUD), `EXPOSED_AUTH_EXTRA_MISSING` (warn). ****Default-OFF**** (edge_auth off ? no-op; worker never opts in). Aligned `auth.resolve_tenant` whitespace-strip. Adversarial 3-lens review (`wf_35b735a9`) ? no bypass. +16 tests; 1259 green cross-OS.

53 - ****khelsutra [#64](https://github.com/avidullu/khelsutra/pull/64) (`8bbc557`) ? SPA `VITE\_API\_BASE`:**** `apiBase()` env-driven (default same-origin `/api`) + `vite-env.d.ts` + 3 tests; build-smoke proved the override bakes in.

54 - ****khelsutra [#65](https://github.com/avidullu/khelsutra/pull/65) (`4627830`) ? alpha deploy kit:**** `deploy/DEPLOY_ALPHA.md` (full split runbook + CORS-preflight gotcha + posture test + deferred notes) + `deploy/cloudflared.config.example.yml` + README/tracker pointers.

55 - ****Discipline:**** isolated PRs off `origin/master` (khelsutra in a dedicated ****worktree**** ? main tree had sibling A8 WIP, since merged as #63), default-OFF, adversarial review, full CI green cross-OS, merged own green PRs, tracker+changelog in-PR. ****? REMAINING for alpha = OWNER stand-up only**** (tunnel + Pages + CF Access + key rotation per `khelsutra/deploy/DEPLOY_ALPHA.md`). ****M1?M9-auth** (prior sessions) detail below.******

56 *****? HUGE SERVING SESSION (2026-06-21) ? 6 PRs MERGED + a REAL cloud-GPU run, owner BATCH-AUTHORIZED the default-OFF code path + \$100/?10k spend:**** *****#285**** (docs §8 D16/D17 + P3 reconcile) . *****#286 M5**** (`backend/config/startup.py` per-profile fail/warn-fast checks + the ****L4 profile-parity**** proof; worker stays torch-free) . *****#287 M6**** (`backend/compute/ComputeBackend` registry ? `CloudRunCompute` dispatch a Cloud Run ****Job**** + bucket-poll; `deploy/cloudrun/{Dockerfile,README}`; mocked) . *****#288 M8**** (per-job ****cost ledger**** + v6 migration + versioned `pricebook` \$0 + `/cost` API) . *****#290 M9-auth**** (Cf-Access JWT verify RS256 + `owner_id` tenant tag; security review found NO bypass; alg=none + HS256-confusion locked) . *****#291 ops-agent codify + `docs/CLOUD\_GPU\_DRYRUN\_GUIDE.md`**** (`deploy/gcp/create_gpu_vm.sh` always bakes the Ops Agent). All ****default-OFF****, isolated, ****adversarial-reviewed** (a workflow per PR)******, full-suite+cross-OS CI green, tracker+changelog in-PR. ****? REAL M7 L4 VM DONE + VERIFIED:**** native WASB on a real L4 ? ****22 rallies**** on the smoke clip ? GCS out; VM deleted (\$0, ~\$0.21). ? the no-Gemini cloud run needs ****skip_ai_handoff=true**** (the long-flagged "0 rallies" cold-start fix). A 2nd dry run via `create_gpu_vm.sh` ****confirmed Ops-Agent auto-installs**** + found the ****watermark-font gap**** (fixed in #292: `bootstrap.sh` now installs `fonts-dejavu-core`). ****M1?M4** (prior session) detail below.******

57 - ****M1 ([#279](https://github.com/Khelsutra/badminton-highlight-indexer/pull/279), `ce22791`):**** `deployment.profile`+`compute_target` on `AppConfig` + `backend/config/presets.py` (`PROFILE_PRESETS` + `suggest_profile`) + loader preset/precedence (defaults<preset<config.json<env via `_deep_merge`; no-profile path = exact old shallow merge) + auto-detect-as-SUGGESTION (D15). Pure/additive, profile='' == today. 3 minor review findings folded.

58 - ****M2 ([#280](https://github.com/Khelsutra/badminton-highlight-indexer/pull/280),**

```

`e111add`):** `StorageConfig.input_backend`/`input_root` +
`backend/storage/{ref.resolve_input_uri,
__init__.resolve_input_ref/acquire_local_input/input_is_local}` + `main.py` API/CLI wired
(acquire local; keep source URI for DB/report). **local = identity passthrough (byte-for-byte
unchanged)**; bucket/Drive fetched to scratch (mirrors worker `cmd_infer`). Unknown scheme?clean
400 (was a 500 regression ? caught by review); `local://` accepted on resolved key; hosted-mode
rejects non-local; OS-independent anchored-path detection (os.path.isabs differs Win+py3.13). 1
major + 6 minor review findings folded. Suite 1105 green, cov 84.84%.
59 - **M3 ([#282](https://github.com/Khelsutra/badminton-highlight-indexer/pull/282),
`2afd54f`):** configurable output/scratch base ? `backend/utils/paths.output_base(config)`
(returns `output.output_dir`, default `"output"`); routed all 6 hardcoded
`os.path.join("output", ?)` scratch sites in `trajectory_hybrid`/`yolo_hybrid`/`gemini` through
it (create+cleanup same var). **DEFAULT `"output"` ? byte-identical** (golden + cross-OS green);
a custom `--output-dir` now actually moves scratch (latent bug fixed). Default-OFF ? no Launch
Report. `tests/test_output_base.py` + a yolo call-site capture; clean-bill focused review (yolo-
coverage minor folded). Suite 1114 green.
60 - **M4 ([#283](https://github.com/Khelsutra/badminton-highlight-indexer/pull/283),
`cee4baa`):** `DeviceContext` (`backend/pipeline/detectors/device.py`) + native WASB **CPU-
fallback** via a new `device="auto"` (cuda-if-available-else-cpu). **Explicit `"cuda"` stays
STRICT** (healthcheck still hard-fails without a GPU ? no silent slow-CPU downgrade; "cuda
default unchanged"). CUDA probe **cached** (healthcheck?run_predict reuse);
`_effective_device()` resolves before argv so "auto" NEVER reaches `wasb_infer.py`; fail-fast
on a typo'd device. `wasb_infer.py` already supports cpu ? no change there. Device-selection
tested offline (mocked subprocess); **real CPU-inference run = owner/GPU-verified.**
`tests/test_device_context.py` + native-runner additions; clean-bill focused review (2 nits
folded). Suite 1126 green, cov 84.96%.
61 ***? NEXT (priority order):**
62 1. **? ALPHA-SHAREABLE ? Claude's half DONE this session (#294/#64/#65).** Engine is
exposure-safe by construction; SPA targets a split origin; the deploy kit + runbook are merged.
**? REMAINING = OWNER stand-up** (not Claude-doable): on the box `pip install -e .[auth]` + the
safe-exposed `config.json` + `RALLY_CORS_ALLOW_ORIGINS` + rotate `GEMINI_API_KEY` + run
`backend.main --server`; CF ? cloudflared tunnel (`api.khelsutra.guru`) + CF Pages
(`app.khelsutra.guru`, `VITE_API_BASE`) + ONE CF Access app over both + the OPTIONS-preflight
bypass. **Runbook = `khelsutra/deploy/DEPLOY_ALPHA.md`.** *(A later UI polish, not the alpha
blocker: a compute PICKER in the UI, D13/D15.)* Full record: [[ui-driven-cloud-serving-gap]].
63 2. **M11** (data-flywheel plumbing) ? ? privacy-sensitive (consent/data), give it FRESH
focus: `backend/flywheel.py` capture?store?shadow-eval?goldenize reusing
`workspace.py::for_video` + `backend/eval/experiment.compare` +
`backend/eval/promotion.py::promote_if_served_safe`, behind `flywheel.*`=OFF + a faked
`consent_attested`. ? depends on M9's not-yet-landed **v7 consent migration** (M8 took v6) +
counsel ToS/DPA; only a default-OFF skeleton is Claude-doable.
64 3. **M12** (`gdrive-api` OAuth StorageBackend) ? `backend/storage/gdrive_api.py`
`GDriveApiStorage(StorageBackend)` + a `gdrive-api://` scheme (regex allows the hyphen; add to
`_KNOWN`+`_backend_class`+the StorageConfig Literal) vs an INJECTED fake Drive (mirror `gcs.py`
DI); keep mount-only `gdrive://`. ? M9-consent cols + per-video P1 = a new **v7** migration (M8
took v6).
65 ***? owner-only residual:** real M5 truly-local runlog (template pre-staged) . GCP spend
for the M7 *service* deploy + a real e2e . counsel ToS/DPA (M9-consent) . real GCP prices+FX +
the M8 usage-emission follow-up . Google OAuth app (M12 real) . CF team-domain/AUD+ingress-lock
. repo rename . DO droplet/token retire.
66
67 ## ? Icebreaker for the NEXT session (copy-paste)
68 > Continue the badminton-highlight-indexer ENGINE serving + UX track. FIRST: `git pull
--ff-only`, then read memory `session-handoff.md` + `current-state.md` (top) + [[ui-driven-
cloud-serving-gap]] + [[compute-stack-gcp-only]].
69 > STATE: **The cloud alpha is LIVE + proven end-to-end** (2026-06-22 night: a real match
? **27 rallies ? reel downloaded**, on the droplet `claude-do-rally-test`/`168.144.126.176`
behind CF Access at `app.khelsutra.guru`; fixed live: `app.` DNS?the tunnel, the Gemini key,
`RALLY_ALLOWED_HOSTS`). **Engine #294 + M11 #336 + M12 #338, khelsutra #64/#65 all merged.**
70 > ***? TOP NEXT ACTION ? owner LOCKED IN the GCP L4 (2026-06-22 night): spin up the L4
for the NON-GEMINI phase** (native WASB inference + owned-model training, NO Gemini). Run
**`bash deploy/gcp/create_gpu_vm.sh`** (defaults `RALLY_GPU=l4` ? `g2-standard-4` 24GB, zone-
sweeps Mumbai?Singapore, bakes Ops-Agent) ? pull corpus from `gs://khelsutra-rally-corpus`
([[gcs-data-source-of-truth]]) ? `python -m backend.worker infer|train` with
`skip_ai_handoff=true` ? **`bash deploy/gcp/teardown.sh delete` AFTER** ([[gcp-vm-always-

```

```

delete]], **$100/?10k cap**. On-demand ~$0.74/hr Mumbai (?$1?2/interactive session, fine);
`RALLY_GPU=t4` fallback if L4 stocks out; add a Spot toggle (`--provisioning-model=SPOT`,
currently STANDARD at `create_gpu_vm.sh:41`) before any LONG training run. Full config/pricing =
[[compute-stack-gcp-only]].
71     > **Also queued ? 3 alpha-hardening issues from the live run (Claude-doable, default-
safe):** khelsutra#111 (SPA survive-refresh + live progress ? the 10-min poll ceiling timed out
~secs before a long job finished), khelsutra#112 (WhatsApp share the VIDEO via Web Share API,
not just text), engine#340 (idempotent `/api/process` ? no Gemini RE-BILL on refresh/"Try
again").
72     > Discipline: ONE isolated PR per item off `origin/master`, default-OFF + golden/cross-
OS-gated, adversarial review before commit, full `run_all_tests.py`+ruff+mypy green, merge own
green PRs, tracker+changelog in-PR, checkpoint memory. ? **shared checkout** (engine AND
khelsutra ? sibling sessions commit concurrently; khelsutra needs a dedicated **worktree**:
junction `web/node_modules` then **`rmdir` the junction BEFORE `git worktree remove`**). ? **the
LIVE alpha runs on the droplet** (SSH `~/ssh/khelsutra_droplet` root) ? don't disrupt the
`khelsutra-engine`/`cloudflared` services or the marketing site.
73
74     Prior session delivered the **engine compute/serving + doc-hygiene** track (10 PRs
merged: #263?#267, #270, #272?#274, #276):
75     - **M2 FINALIZED on a real GPU** ? `worker train --trajectory-source detector` on a GCP
**L4 (Singapore; Mumbai was stocked-out)** ? Gen-0 bundle `gs://khelsutra-rally-
corpus/weights/0.1.0-l4/` (honest **n=2 plumbing** result, not a quality model). Both VMs
**deleted**.
76     - **DigitalOcean DROPPED for compute ? GCP is the sole stack** (ADR-013; DO GPU not
enabled/credit-funded, Paperspace subscription-gated). [[compute-stack-gcp-only]] · [[gcp-vm-
always-delete]] · [[gcp-ops-agent-enable]].
77     - **DECOUPLED_COMPUTE delivered + ARCHIVED** ?
`docs/archives/past_projects/DECOUPLED_COMPUTE/`.
78     - **NEW tracked subproject: `docs/COMPUTE_DECOUPLED_SERVING/` + ADR-014** ? one pure
core (DETECT?WINDOW?STITCH, never branches on profile) + `ComputeBackend`/`StorageBackend`
profiles (**truly-local**, **cloud-serving** [Cloud Run GPU runs detect AND stitch, metered],
**cpu-mock**). **? AWAITING OWNER M0 DESIGN SIGN-OFF before any code.**
79     - **Doc governance:** `docs/DOC_STATUS.md` register + **archival due-diligence**
(honestly-update?then-archive; codified in CLAUDE.md; [[doc-status-register]]); per-video docs
reconciled; **data layer** carved into `docs/data_pipeline/` (no-ML), field-
ops/PMF?`archives/field-pmf/`, Roora?`archives/roora-vendor/`.
80
81     ? **Shared checkout** ? sibling sessions commit + flip branches here mid-session (hit
twice this session). **Branch from `origin/master` explicitly, re-verify HEAD before commit,
stage explicit paths, never `git add -A`.** [[gotcha-shared-checkout-branch-collisions]]. ?
**`sed -i` over a glob churns CRLF on all matched files** ? separate real changes with `git diff
--ignore-cr-at-eol` and revert the noise.
82
83     ## ? Next steps (resume here)
84     1. **? M0?M4 SHIPPED (#279/#280/#282/#283) ? the config/input/output/device SEAM LAYER
is COMPLETE ? NOW M5+ (mostly owner-gated).** Decisions locked in README **$2 D7?D15** (D7
scale-to-zero · D8 versioned DB pricebook USD/INR · D9 Cloudflare Access · D10 data-for-reels
trade adults-only · D11 Gemini-ON-until-floor + D12/M11 flywheel · D13 user-switchable profiles
· D14 NORTHSTAR gdrive-api OAuth = M12 · D15 suggest?confirm). **Engine build sequence:** ~~M1
deployment.profile~~ ? ~~M2 input_backend~~ ? ~~M3 output-base~~ ? ~~M4 DeviceContext + CPU-
fallback~~ **ALL DONE.** **? M5** = truly-local profile e2e (preset + startup checks + first
committed runlog) ? **? owner real-GPU** (needs a GPU box / owner's WSL machine to run
detect+stitch locally, then commit the runlog). **M6/M7** Cloud Run dispatch + container image
(? owner GCP spend), **M8** cost ledger + pricebook, **M9** edge-auth (Cf-Access), **M11** data-
flywheel harness, **M12** gdrive-api OAuth. **Per-video-workspace P3 (`output/chunks_`) is now
subsumed by M3 ? reconcile/close it.** **Claude-doable WITHOUT owner gating:** the M5
preset+startup-check code (the actual run is owner's); the M8 cost-ledger DB migration +
pricebook + aggregation (pure code, owner does the real-cost calibration); the M11 harness
plumbing. M6/M7/M9/M12 need owner cloud/counsel sign-off.
85     2. **Per-video workspace P1?P6** (#264 shipped P0): P1 v6 DB migration `workspace_uri` ?
P2 worker ? P3 `output/chunks_` de-hardcode ? ? (Claude-doable, default-OFF).
86     3. **Ops-Agent codification into `deploy/gcp`** (auto-enable observability on every VM)
? small, [[gcp-ops-agent-enable]].
87     4. **[owner]** Grow the golden corpus (highest-leverage) · set ship-gate target #172 ·
full-corpus training (n?5) for real weights.

```

```

88     5. Full prioritized P0/P1/P2 list = `docs/NEXT_STEPS.md` top.
89
90     ## ? Open decisions / owner gates
91     - **M0 design sign-off** (the blocker above) + the COMPUTE_DECOUPLED_SERVING $8
questions.
92     - Doc-hygiene leftovers (`DOC_STATUS.md` $4): confirm the 3 COMPLETED top-level pointer-
stubs; `HOSTING_PLAN`/`UI_PROPOSAL` currency.
93     - Housekeeping: retire the shared D0 droplet `claude-do-rally-test` (~$24/mo) + the D0
token; rename repo off "badminton".
94
95     ## ? Ramp-up kit
96     - **Memory:** `[[current-state]]` (read first) . `[[compute-stack-gcp-only]]` . `[[gcp-vm-
always-delete]]` . `[[gcp-ops-agent-enable]]` . `[[doc-status-register]]` . `[[gotcha-shared-checkout-
branch-collisions]]`.
97     - **Docs:**
`docs/COMPUTE_DECOUPLED_SERVING/{README,TESTING_STRATEGY,architecture.svg,runlogs/}` .
ADR-012/013/**014** in `docs/archives/decisions/DECISIONS.md` . `docs/NEXT_STEPS.md` .
`docs/DOC_STATUS.md` . `docs/PER_VIDEO_WORKSPACE.md` . `deploy/gcp/README.md` (GPU runbook;
teardown defaults to `delete`).
98     - **Code anchors (the pure core the serving project builds on):**
`backend/pipeline/detectors/base.py` (DetectorRunner CSV contract) .
`tracknet_runner.py::trajectory_to_action_windows` .
`backend/pipeline/stitcher/compiler.py::compile_highlights` .
`backend/pipeline/segmenters/trajectory_hybrid.py::_resolve_runner` (the compute seam) .
`backend/storage/*` . `backend/worker/___main__.py` . `backend/utils/workspace.py`.
99
100    ## ? Parallel track (NOT this session ? sibling sessions)
101    **KhelSutra brand-site + product UX/Hindi-Kannada localization** (repo
`Khelsutra/khelsutra` + #275 here) ? `[[next-session-ux-localization]]` / `[[khelsutra-domain-
launch]]`. The **rally-quality / owned-model** track is live too (R-series,
`RALLY_QUALITY_RESEARCH.md`; gated on corpus growth). These are background to the
compute/serving resume above.

13
14     *** 2026-07-02 ? P5 SCRATCH/RETENTION MERGED; NEXT = REAL `gcs.py` MYPY FIX.** Engine
[#427](https://github.com/Khelsutra/badminton-highlight-indexer/pull/427) merged to `master` as
`19ebe5a`. Successful remote-input scratch dirs are now cleaned after `/api/process`, async
`/api/compile`, `/api/assets`, and CLI processing; failed remote fetch/hash paths clean partial
scratch; Cloud Run marker reads now use `TemporaryDirectory`; remote-input reports default to
durable `output/reports` when no explicit report output directory is configured. Tracker row P5
is Done. Local verification: targeted scratch/API tests `110 passed, 1 skipped`; full covered
suite `1569 passed, 11 skipped`, coverage `85.15%` vs floor `70` (no regression from P4); `ruff

```

check .`; `python -m tools.check_md_links`; `git diff --check`. GitHub CI all green. Local `mypy backend training --no-incremental` still fails only at known R1-27/P1 (`backend/storage/gcs.py:31`) when `google-cloud-storage` is installed. **\*\*NEXT:\*\*** branch fresh from `origin/master` for the real `backend/storage/gcs.py` mypy fix, one PR only.

15

16 ****?? 2026-07-02 ? WAVE 1 P4 MERGED; NEXT = P5 SCRATCH/RETENTION.**** Engine [#426](https://github.com/Khelsutra/badminton-highlight-indexer/pull/426) merged to `master` as `c6bb4bf`. Serving-path ffmpeg/ffprobe subprocesses now use bounded defaults (`60s` ffprobe, `1800s` ffmpeg; env overrides `RALLY\_FFPROBE\_TIMEOUT\_SEC` / `RALLY\_FFMPEG\_TIMEOUT\_SEC`, `0` = wait forever) across validators, chunk extraction, Gemini debug trim, audio extraction, highlight compile probe/trim/concat, and annotation proxy probe/transcode. Timeout failures now map to clean validation failures, best-effort fallbacks, compile job failure paths, or proxy fallback. Tracker row P4 is Done. Local verification: targeted timeout/media tests `35 passed`; API/media tests `80 passed, 1 skipped`; full covered suite `1562 passed, 11 skipped`, coverage `85.15%` vs floor `70`; `ruff check .`; `python -m tools.check\_md\_links`; `git diff --check`. GitHub CI all green. Local `mypy backend training --no-incremental` still fails only at known R1-27/P1 (`backend/storage/gcs.py:31`) when `google-cloud-storage` is installed. ****NEXT:**** branch fresh from `origin/master` for P5 scoped scratch/retention cleanup, one PR only.

17

18 ****?? 2026-07-02 ? Tracker row P3 is marked Done. Local verification: `tests/test\_api\_annotations.py` `7 passed`; full covered suite `1552 passed, 11 skipped`, coverage `85.14%` vs floor `70`; `ruff check .`; `python -m tools.check\_md\_links`; `git diff --check`. GitHub CI all green. Local `mypy backend training --no-incremental` still fails only at known R1-27/P1 (`backend/storage/gcs.py:31`) when `google-cloud-storage` is installed. ****NEXT:**** branch fresh from `origin/master` for P4 ffmpeg/ffprobe serving-path timeouts, one PR only.

19

20 ****?? 2026-07-02 ? WAVE 1 P2 MERGED; NEXT = P3 SOURCE CACHE.**** Engine [#424](https://github.com/Khelsutra/badminton-highlight-indexer/pull/424) merged to `master` as `9523d17`, closing #340/#330. `/api/process` is now idempotent by content hash when an existing processed video has stored play segments: default re-submit returns cached segments with `compute.path="cached"` and never calls validators/segmenters; explicit `force=true` persists through `jobs.params` and keeps the destroy-after-confirm reprocess behavior. Tracker row P2 is marked Done; P0 corrected to #423. Local verification: full covered suite `1551 passed, 11 skipped`, coverage `85.16%` vs floor `70`; `ruff check .`; `python -m tools.check\_md\_links`; `git diff --check`. GitHub CI all green. Local `mypy backend training` still fails at `backend/storage/gcs.py:31` with `google-cloud-storage` installed ? this is the known R1-27/P1 item. ****NEXT:**** branch fresh from `origin/master` for P3 remote source caching (`/api/source` + annotation proxy), one PR only.

21

22 ****?? 2026-07-02 ? KHELSUTRA-GURU HEALTH PLAN BOOTSTRAPPED; docs-only PR MERGED.**** Owner asked to sync all five repos, cross-check `docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md`, identify completed items, track the cleanup as a repo project, and prepare a wave-wise execution plan. ****DONE:**** all five repos pulled to head; post-sync completions reconciled; audit pushback recorded (`R1-27` still open despite PR #422; droplet-live premise stale for `R2-8`); destructive local hygiene already reflected (nested sdc self-clone absent, yt-dlp debris absent, engine git garbage pruned). ****Docs-only PR:**** engine [#423](https://github.com/Khelsutra/badminton-highlight-indexer/pull/423) merged to `master` as `e517475`, adding `docs/KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN.md` and registering it in `docs/README.md`, `docs/DOC\_STATUS.md`, `docs/NEXT\_STEPS.md`, marking the audit as a snapshot, and fixing `docs/CODE\_MAP.md` for the #422 output-dir behavior. Local verification: `python -m tools.check\_md\_links`; `git diff --cached --check`. GitHub CI was all green, including full offline mocked suite. ****NEXT:**** execute one small PR per \$7 row in the plan, starting Wave 1 engine cost/correctness (`P2` #340 idempotency/re-bill, then `P3` source caching, `P4` ffmpeg timeouts, `P5` scratch/retention, `P6` real `gcs.py` mypy fix). Code PRs must keep coverage at/above repo floor; SPA/UI PRs must include validated screenshot/screencast evidence using the existing `khelsutra-screencast/` convention where applicable.

23

24 ****?? 2026-06-29 ? rally code-review fixes MERGED; P2b is the next pick-up.** READ [[next-session-rally-finding-b-promotion]]. ****** A code-review of rally detection (done in a now-deleted sibling clone) found 3 issues, all fixed + merged to `master` ****0c9c693**** (main clone was

```

`0b4f492` ? **pull first**): **A** `_spread` ceil-fix (unconditional), **B**
`_trim_inactive_tail` temporal-density behind **inactivity_temporal_density` (default-OFF,
zero-regression no-op)**, the `rally_seg_eval` A/B CLI (--[vs-]inactivity-temporal-density`) ?
PRs **#394** + **#395**; collector-C skipped-row warning **sdc#50**. ? **#393 was CLOSED by a
branch-rename, not merged ? #394 is the roll-forward ([[lesson-branch-rename-closes-open-
pr]]). **? NEXT (owner-requested): P2b ? GPU + golden labels + F:\ data are now LIVE ? run the
golden A/B at SERVED, **promote-or-reject** the flag (`promote_if_served_safe`, no
`tol_f1`/dual-set regression + a Launch Report), run the full suite incl. now-unlocked
GPU/golden paths, then a **GO/NO-GO launch-readiness report for owner signoff** (recommend,
don't decide). Runbook = `docs/RALLY_DETECTION_FIXES_PLAN.md` §8 Q2.
25
26 **?? SESSION WRAP ? 2026-06-23 (owner called a clean slate; out of budget, "human runs
the loop" until quota refresh). READ FIRST on return.**
27 - **THE WIN:** owner demoed a small clip ? highlights to a friend = **"pure bliss."**
The whole cloud/serving/docs arc this session shipped + merged.
28 - **WHAT SHIPPED (all merged): **cloud compute-picker`validation method` (#341 ?
`result.compute.path` proves which backend ran + the GCP-verifiable Cloud Run execution;
`scripts/verify_compute_path.py`; live-proven cloud?cloud_run+22 rallies, local?in_process) .
async`/api/compile` (#339/#108) . #342 GOOGLE_CLOUD_PROJECT guard . user guide
**`docs/CREATING_REELS.md`** (#343) . operator runbook
**`docs/CONVERT_GCS_VIDEOS_TO_HIGHLIGHTS.md`** + committed `deploy/cloudrun/cloudbuild.yaml`
(#346) . **`khelsutra/deploy/GPU_VM_SERVING.md`** (#113, owner-merged) = move the live engine
off the droplet onto an L4 GPU VM + cut the token-managed tunnel over, with a **Gemini?WASB
detection switch**. Droplet full-install suite GREEN (1461 passed).
29 - **? OPEN THREADS for return (prioritized): ** (1) **? [khelsutra
#114](https://github.com/avidullu/khelsutra/issues/114)** ? CF Access: an ALLOWLISTED guest
email still couldn't sign in (blocks sharing the alpha; likely the email isn't in the right
Access app's policy / selector-type / OTP delivery ? full triage in the issue). (2) Owner wants
a **DOC-CONSOLIDATION pass** (deferred ? budget). (3) Backlog (`docs/BACKLOG.md` ? **Batch /
declarative orchestration**): a **one-YAML`indexer --batch`** driver + a **one-shot GPU-VM
`serving-startup.sh`** (design hinge = secrets out of plaintext metadata ? Secret Manager). (4)
Make the cloud toggle live on the alpha (owner deploy ? GPU VM per #113, or the droplet stays).
30 - **STATE:** alpha LIVE on the droplet (CPU, `gemini` segmenter) at
`api.khelsutra.guru`; GPU-VM-serving is documented not deployed; 0 of my PRs open; GCP $0 (all
validation resources torn down); only sibling worktrees remain. [[cloudrun-gpu-serving-gotchas]]
[[gotcha-shared-checkout-branch-collisions]]
31
32 **Checkpoint:** 2026-06-23 (**CLOUD TOGGLE LIT + VALIDATION METHOD + LIVE E2E PROVEN +
user guide + droplet full-suite**). master `688d28f`+. Owner: "light up the cloud compute toggle
with Cloud Run + a good validation method to ensure the intended path was taken" ? then "run the
test on the droplet with a full install" ? "write a doc to help users set up + create reels."
ALL DONE:
33 - **? Validation method ? engine [b>#341](https://github.com/Khelsutra/badminton-
highlight-indexer/pull/341) MERGED (`d92cc10`): **compute-path PROVENANCE ? the job result
carries `compute={path:"in_process"|"cloud_run"|"not_run", requested, execution, job, region,
outputs_uri}` (the cloud `execution` = the real Cloud Run execution name, GCP-verifiable).
`ComputeResult.execution` threaded via `run_infer`; honest failure records (path=cloud_run only
when it actually dispatched+ran, else not_run); `[COMPUTE]` audit log;
**scripts/verify_compute_path.py`** asserts the path + cross-checks the execution in GCP.
**Also forwards`indexing.skip_ai_handoff` to the cloud job** so the picker's cloud path yields
rallies without a Gemini key. Adversarial review caught 2 honesty bugs (false "report carries
it" claim; misleading log on a never-dispatched reject) ? fixed. Suite 1480?.
34 - **? LIVE E2E PROVEN ($0 after teardown): **rebuild the Cloud Run L4 image + Job; ran a
local`cloud-serving` engine (`deployment.profile=cloud-serving` + `skip_ai_handoff=true`
override +`CLOUD_RUN_JOB/REGION=asia-southeast1/PROJECT` + `storage.output_root`) ?
`api/capabilities` reported **`cloud_available:true`** (toggle lit). `verify_compute_path.py
--compute cloud` ? **`path=cloud_run`, execution `rally-worker-qbcqb`** (GCP cross-check:
succeededCount=1) ? **22 rallies** (skip_ai_handoff forward works). `--compute local` ?
**`path=in_process`** ?. Both directions provably correct. Proof logs in
`artifacts/cloudrun_lightup/`. Job+image+AR repo+prefix deleted.
35 - **? Verify-script Windows bug ? [b>#344](https://github.com/Khelsutra/badminton-
highlight-indexer/pull/344) OPEN: **`--verify-gcp` spawned bare `gcloud` (Windows =
`gcloud.cmd`, WinError 2) ? resolve via `shutil.which`. Found during the live run (path
assertion passed first).
36 - **? [b>#342](https://github.com/Khelsutra/badminton-highlight-indexer/pull/342) MERGED

```

```

(688d28f) ? `GoogleCloudRunJobClient.run_job` now guards an unset `GOOGLE_CLOUD_PROJECT`**
(originated as a spawned background-task chip). It passed `project` (`Optional[str]`, from the
`GOOGLE_CLOUD_PROJECT` env in `get_compute_backend`, can be None) straight to
`JobsClient.job_path(project: str, ?)` ? a real latent bug: mypy `arg-type` visible ONLY with
`google-cloud-run` installed (CI green because the SDK is deliberately NOT a CI/test dep), and
at runtime a None/empty project builds a bogus `projects/None/locations/?` path on the real
dispatch. Fix = guard BEFORE the lazy SDK import (so it's CI-testable, SDK-absent) ? raise a
clear `RuntimeError` naming the env var; narrows `Optional[str]`?`str` for `job_path`.
+`test_real_client_rejects_missing_project` (None + ""); compute suite 14?15, full suite
**1488?**, cov **85.86%**, all 10 CI green. Verified the error reproduced at `cloud_run.py:74`
pre-fix (the earlier broad-`mypy backend` false-pass was a stale `.mypy_cache` ? caught via
`--no-incremental`). Follow-up doc [#345](https://github.com/Khelsutra/badminton-highlight-
indexer/pull/345) (`9329473`) noted `GOOGLE_CLOUD_PROJECT` is required in
`deploy/cloudrun/README.md` Gotchas. [[working-agreement-merging]]
37 - **? Droplet FULL-install suite GREEN:** pushed master?`root@168.144.126.176:~/bhi-
fulltest`, fresh venv + `pip install -e .[dev,auth,storage-gcs,storage-s3]` + torch CPU +
ffmpeg/cv2 libs ? **1461 passed, 12 skipped** (the skips = the private `obsreport` git+ssh dep,
not installed). Droplet restored (dir removed, 1.6G freed).
38 - **? User guide ? [#343](https://github.com/Khelsutra/badminton-highlight-
indexer/pull/343) OPEN:** new **`docs/CREATING_REELS.md`** (end-user: prereqs?`indexer
--app`?wizard?reel via web UI AND the API chain
capabilities?upload/gs:///process[202+poll]?query?compile[202+poll]?download; +cloud toggle
+troubleshooting). Researched via a verify-then-write workflow (every command/endpoint/flag
checked vs the shipped engine; LIGHT-tier-honest). Indexed in docs/README.md + DOC_STATUS.md
§3d.
39 - **? NEXT:** merge #343+#344 on green; clean worktrees (bhi-computeval/bhi-userdoc/bhi-
verifyfix). Owner follow-up to make the toggle live on the ALPHA = deploy a persistent Cloud Run
Job + flip the droplet engine to cloud-serving (a deploy decision, not code). [[cloudrun-gpu-
serving-gotchas]] [[gcp-vm-always-delete]] [[working-agreement-merging]]
40
41 **Checkpoint:** 2026-06-22 (**ASYNC `/api/compile` [#329] ? engine [#339] + SPA [#108]
BUILT; kills the Cloudflare 524 on slow reel stitches**). engine PR
[#339](https://github.com/Khelsutra/badminton-highlight-indexer/pull/339) (branch `feat/async-
compile`, CI running?merge on green), khelsutra
[#108](https://github.com/avidullu/khelsutra/pull/108) **MERGED** (`ed33a51`). The owner's first
real reel 524'd (origin timeout) while the reel actually built ? `/api/compile` ran the ffmpeg
stitch SYNC (~3min on the 2-core droplet > CF's ~100s edge). **Fix = make it async, mirroring
`/api/process`:** submit ? **202 + compile job id**; cheap checks (video/segments/floor/safe-
name) fast-fail 4xx at submit; the stitch runs on the worker; the client **polls
`/api/jobs/{id}`**. **Engine #339:** schema **v9** (`jobs.kind` 'process'|'compile' NULL?process
+ `jobs.params` JSON; additive/idempotent) + `create_compile_job` + `_run_claimed_job`
dispatches on `kind` (compile?`_execute_compile`, else unchanged process path; cost/flywheel
process-only) + `_resolve_compile` shared submit/worker + a stitch error ? clean
`done`+_`result.status=failed` (no crash) + the in-repo `backend/api/static/app.js` polls + **re-
bundled `backend/ui/`** from #108. Suite **1473?**, ruff+mypy clean, cov **85.60%**, adversarial
review clean (its one finding ? "clients must poll" ? fixed via app.js + the re-bundle). **SPA
#108:** `compileReel` submit?`pollCompileJob`?`CompileResult`; a `done`+_`failed` result throws
an ApiError carrying the engine message (so classifyError surfaces it, not "engine
unreachable"); `onBuild` unchanged (still `highlightUrl`, split-origin-safe); 228 web + 95 site
tests green. ? **schema head is now v9 = compile job (NOT compute-picker ? that's v8);
M9-consent migration ? v10** (the prior checkpoint's "M9-consent=v9" is now stale ? check
`PRAGMA user_version`). **Deploy:** #339 ships the API + the poll-aware bundle together ? deploy
as ONE unit (don't deploy async engine vs an old sync bundle). [[gotcha-shared-checkout-branch-
collisions]] [[working-agreement-merging]]
42
43 **Checkpoint:** 2026-06-22 (**M11 + M12 serving-code DONE ? 2 PRs merged; next = pair on
the alpha go-live**). Owner: "build 3 (M11) then 4 (M12) then we pair on the alpha (2); tell me
the counsel inputs and I'll have them ready." Both Claude-doable serving items merged on green
(isolated worktree off origin/master): **M11** data-flywheel skeleton
[#336](https://github.com/Khelsutra/badminton-highlight-indexer/pull/336) (`334ad0f`) ?
`backend/flywheel.py` capture/shadow_eval/propose_promotion + `FlywheelConfig` (default-OFF) +
gated `_maybe_run_flywheel` hook; **INERT via TWO guards** (`enabled=False` AND
`consent_attested` faked-deny ? captures nothing in prod); reuses
workspace/eval/promotion/storage; **NO migration**; +14 tests incl. a guardrail-lock;
adversarial review (`wf_1ee5ffdf`) inert_guarantee=yes. **M12** `gdrive-api:/// OAuth

```

StorageBackend [#338](https://github.com/Khelsutra/badminton-highlight-indexer/pull/338) (`819e395`) ? `backend/storage/gdrive\_api.py` (path?Drive-id resolve, **idempotent** put, lazy Google imports, injected-fake hermetic tests) + scheme wiring (ref/`\_\_init\_\_`/models + hyphen?underscore settings); adversarial review (`wf\_ae8c9b0f`) no_regression=yes, folded the idempotent-put fix. Suite 1467? cross-OS, ruff+mypy clean. ? **schema ladder drifted mid-session: v7=`locale`, v8=compute-picker ? M9-consent migration is now v9** (check `PRAGMA user\_version` first). **? NEXT = OWNER-DRIVEN alpha go-live pairing** (CF tunnel+Pages+Access + Gemini-key rotation per `khelsutra/deploy/DEPLOY\_ALPHA.md`); M11-live + M9-consent need the counsel ToS/DPA 7-pt checklist ([[ui-driven-cloud-serving-gap]]). Sibling tracks advanced in parallel: M6?/api/process (#333), Cloud-Run env (#334), the SPA compute-picker + real Cloud-Run-GPU validation (below). [[lesson-verify-engine-surface-before-scoping]]

44

45 **Checkpoint:** 2026-06-22 (**LOCAL-APP ? CLOUD RUN path ? ? ALL 4 ITEMS DONE (5 PRs merged + real-GPU e2e VALIDATED + proof on the local box + \$0 teardown)**). engine master `334ad0f`, khelsutra master `f67dfe7`. Owner: "build the cloud Run path in the order + ensure due-diligence testing; I approve the GPU VM budget until you get a clean e2e screencast on my local machine." APPROVED ORDER = (1) API?compute-seam wiring ? (2) P3a micromamba Dockerfile ? (3) SPA compute-picker (engine 3a + SPA 3b) ? (4) real Cloud Run validation + screencast. **PRs: #333 (1), #334 (2), #335 (3a), khelsutra #104 (3b), #337 (the cloud-dep fix item-4 found).**

46 - **? #104 ? compute-picker SPA half (3b)** (khelsutra master `f67dfe7`): IngestPanel probes `/api/capabilities`, shows a "On my computer"/"In the cloud" toggle ONLY when `deployment.cloud\_available`, gates CLOUD behind a required cost-ack (disabled controls + early-return), threads `compute` ? `POST /api/process`. Default-OFF (no picker / `compute` omitted when cloud unavailable). New `ingest.compute.\*` strings x6 locales + site mirror (kn/hi/es/da/id AI-drafted ? native review pending). typecheck + 226 web tests + build + coverage + 89 site tests green; adversarial review clean.

47 - **? ITEM 4 DONE ? real Cloud Run L4 GPU e2e VALIDATED, both directions, \$0 teardown.** Proof bundle on the local box = **`artifacts/cloudrun\_e2e\_validation/`** (`RUN\_TRANSCRIPT.md` + `cloudrun\_e2e\_reel.mp4` 22-rally 1080p reel + `contact\_sheet.png` + Half-A/B logs + intervals + `TEARDOWN.md`). **Half A** (direct execute) and **Half B** (the LOCAL control plane dispatching `worker infer` in cloud-serving mode ? bucket-poll ? ingest) BOTH produced **22 rallies** on `mahadevpura\_smoke\_180s.mp4` (deterministic vs the prior local-L4 run), `cuda True`, 325s detect; the local box then stitched the cloud-detected intervals into the reel (the M6 split proven). **Total spend ? \$0.60, \$0 ongoing** (Job + image + AR repo + validation prefixes all deleted; corpus untouched; worktrees removed).

48 - **? The first real L4 execution CAUGHT A BUG the mocks couldn't ? engine [#337](https://github.com/Khelsutra/badminton-highlight-indexer/pull/337) MERGED** (`5fb55e9`): the Job booted + GCSFuse-mounted the bucket, then died at the first gs:// fetch ? `ModuleNotFoundError: No module named 'google.cloud'` (`backend/storage/gcs.py:24`); the Dockerfile did a bare `pip install .` but the cloud worker does its gs:// I/O through `backend.storage`. Fix = `pip install "[storage-gcs]"` + a structural guard (suite 1457?).

49 - **? REUSABLE GOTCHAS for the next cloud run:** (1) Cloud Run **L4 GPU is region-limited** to `asia-southeast1/europe-west1/europe-west4/us-central1/us-east4` (NOT Mumbai) ? use **asia-southeast1 (Singapore)** + **`--no-gpu-zonal-redundancy`** (zonal-redundant GPU is capacity-blocked). (2) Weights (WASB-C3 not baked) ? **GCS volume mount** of the corpus bucket ? `/mnt/corpus`, `WASB\_WEIGHTS=/mnt/corpus/models/wasb\_badminton\_best.pth.tar` (no image change). (3) **Git Bash mangles `/mnt/...` flag values (MSYS path-conv) ? run gcloud GCS-mount/job commands via the PowerShell tool** (`MSYS\_NO\_PATHCONV=1` breaks gcloud's launcher). (4) cloud-serving sets `skip\_ai\_handoff=False` ? **must override `--set indexing.skip\_ai\_handoff=true`** for a pure-engine (no-Gemini-key) run, else the hybrid segmenter `return []` (0 rallies). (5) Cloud Run pins the image DIGEST at create ? `jobs update --image ? :latest` after a rebuild. (6) The local control plane needs `pip install google-cloud-run` + ADC (`gcloud auth application-default`). **? Owner literal-screencast option:** replay `indexer --app` against a cloud-configured engine + drive the SPA picker while recording. [[gcp-vm-always-delete]] [[compute-stack-gcp-only]] [[ui-driven-cloud-serving-gap]]

```

11. assistant (2026-07-02T08:11:31.032Z)

I have good context now. There are **9 open PRs**; excluding #390, that leaves **8 to decide on**: #428, #420, #419, #418, #417, #416, #415, #414.

Notably, several of these (#414?#420) were created early on 2026-07-02 (04:50?04:57) as a batch, while the handoff shows the "Wave" plan then implemented similar items *fresh* as #424/#425/#426/#427 ? so some may now be superseded. I need to check each carefully.

First, let me sync the repos. Let me check the exact state of each before touching anything

(branch, dirty, ahead/behind).

0 0

15. assistant (2026-07-02T08:12:24.553Z)

The engine's `master` (local and origin) is at `d00b4db ... (#428)` ? that commit message suggests ****#428 may have just been merged**** by a concurrent session, even though the earlier `gh pr list` showed it open. Let me re-check the live PR state before doing anything.

16. user (2026-07-02T08:12:30.996Z)

```

=== does origin/master contain the #428 squash commit d00b4db? ===
d00b4db fix gcs storage lazy import typing (#428)
19ebe5a clean remote input scratch dirs (#427)
c6bb4bf bound ffmpeg subprocess timeouts
```

17. assistant (2026-07-02T08:13:17.093Z)

#428 was merged at 08:12 (by a concurrent session, between my two list calls). So the picture is now clear:

- ****Merged already:**** #428 (gcs mypy), and earlier #424/#425/#426/#427 + #422/#423.
- ****Remaining open (excluding #390):**** #420, #419, #418, #417, #416, #415, #414 ? ****7 PRs****, all created in a 04:50?04:57 batch, all showing `mergeable=UNKNOWN`.

Let me finalize the repo sync (engine is sitting on the now-merged feature branch), then gather full data on each PR.

18. user (2026-07-02T08:13:20.918Z)

```
=== working tree clean? ===
=== switch to master (already at origin head d00b4db) ===
Your branch is up to date with 'origin/master'.
Already on 'master'
d00b4db fix gcs storage lazy import typing (#428)
=== safely delete merged local feature branch (git branch -d refuses if unmerged) ===
error: branch 'fix/gcs-mypy-import' not found
(kept: not fully merged or in use)
=== final: current branch + sync state ===
master
0 0
```

19. assistant (2026-07-02T08:13:37.182Z)

The shared checkout was already moved to `master` by a sibling session (and the merged branch deleted) ? end state is exactly what I want. ****All repos are now at remote head:****

```
| Repo | Branch | State |
|---|---|---|
| badminton-highlight-indexer | master @ `d00b4db` | ? synced |
| khelsutra | master | ? synced |
| rally-annotator | main | ? synced |
| sports-data-collector | master | ? synced (intentional `.gitignore` hunk preserved, not clobbered) |
| sports-obsreport | main | ? synced |
| khelsutra-screencast | ? | not a git repo (skipped) |
```

Now let me gather full data on the 7 PRs ? metadata, CI status, and file lists.

20. user (2026-07-02T08:13:50.820Z)

```
##### PR #414 #####

branch  : docs/claude-md-current-state-truth-sync -> master
created : 2026-07-02T04:50:42Z updated: 2026-07-02T04:50:42Z
merge   : CONFLICTING DIRTY
size    : +20/-13 across 1 files, 1 commits
CI      : {'SUCCESS': 11} (11 checks)
--- body (first 900 chars) ---
Fixes audit finding **R2-5 (P1)**: the agent-loaded `CLAUDE.md` "Current state" section was frozen at 2026-06-10 (62fb2fb) and had gone ~3 weeks false ? a fresh agent session reading it would conclude the platform/owned-model work never started and propose re-designing things that already shipped.
```

What / why

```
- **Rewrote "Current state" (now dated 2026-07-01)** against code + git log:
  - Platform slice **shipped**: async job model (`backend/api/job_worker.py`; async
    `/api/compile` #339), `COMPUTE_DECOUPLED_SERVING` M0?M9 largely shipped + M11 data-flywheel
    (#336) + M12 gdrive-api (#338), SPA compute-picker (#335/#341), DB schema v9, packaging track in
    progress.
  - Owned-model track: `DECOUPLED_COMPUTE` **delivered** on GCP (M0?M2 + M3.5, archived #270);
    Gen-0 weights `0.1.0-l4` pushed (n=2 plumbing-only); R4 density fix default-ON (#396).
  - **Launch NO-GO recorded** (owner, 2026-0
```

```
##### PR #415 #####
title   : api: root a relative security.upload_dir under the app home (P0a parity with
output_dir)
branch  : fix/upload-dir-app-home -> master
created : 2026-07-02T04:52:45Z updated: 2026-07-02T04:52:45Z
merge   : CONFLICTING DIRTY
size    : +80/-5 across 4 files, 1 commits
CI      : {'SUCCESS': 11} (11 checks)
--- body (first 900 chars) ---
<!-- Audit 2026-07-02, finding R1-20 (upload_dir CWD-relative; the task brief labeled it R1-19).
-->
```

Summary

`security.upload\_dir` defaulted to the CWD-relative `output/uploads` and was ****never passed through the P0a app-home resolver**** ? only `output.output\_dir` was resolved (`backend/main.py:1992`). So the packaged `indexer --app` (which `scripts/install.py` advertises as launchable from any shell) wrote browser uploads into whatever CWD the shell happened to have ? or 500'd on an unwritable one ? while the SQLite DB and reels correctly lived under `RALLY\_APP\_HOME`. Exactly the CWD-vs-app-home class of bug P0a was built to eliminate.

```
**Fix:** `backend/api/uploads.py::_upload_cfg` now resolves `upload_dir` through the same
`resolve_output_dir` (`backend/utls/app_home.py`) used for `output.output_dir`, mirroring its
semantics exactly:
- `RALLY_APP_HOME` **unset** ? the configured v
```

```
##### PR #416 #####
title   : fix(storage): gdrive-api ? chunked streaming download + loss-proof idempotent put
branch  : fix/gdrive-api-chunked-download-safe-put -> master
created : 2026-07-02T04:53:18Z  updated: 2026-07-02T04:53:18Z
merge   : MERGEABLE CLEAN
size    : +199/-21 across 2 files, 1 commits
CI      : {'SUCCESS': 11} (11 checks)
--- body (first 900 chars) ---
```

What / why

Fixes audit finding ****R1-18**** (AUDIT_REPORT_khelsutra-guru_2026-07-02) on
`backend/storage/gdrive\_api.py` ? two latent hazards on the Drive-API storage hot path before
the reel round-trip goes live:

1. ****Whole-file RAM buffering on download.**** `fetch\_to\_local` did `get\_media().execute()`,
materializing the entire object as one `bytes` value ? an OOM waiting to happen for a multi-GB
source/reel on a memory-limited Cloud Run box. It now streams via
`googleapiclient.http.MediaIoBaseDownload` in bounded ****32 MiB chunks**** (lazy import behind a
`\_downloader` seam, mirroring the existing `\_media\_body` seam/convention). The stream writes to
a `dst + ".part"` sibling and `os.replace`s into place, so a mid-download failure can never
leave a truncated `dst` that a later `overwrite=False` call would trust as complete.

2. ****Delete-before-upload data-loss window in `put()`.** A re-put

```
##### PR #417 #####
title   : fix(compute): rescue-or-cancel on Cloud Run bucket-poll timeout (audit R1-21)
branch  : fix/cloud-run-poll-timeout-cancel -> master
created : 2026-07-02T04:55:12Z  updated: 2026-07-02T04:55:12Z
merge   : MERGEABLE CLEAN
size    : +228/-8 across 3 files, 1 commits
CI      : {'SUCCESS': 11} (11 checks)
--- body (first 900 chars) ---
```

Fixes audit finding ****R1-21**** (AUDIT_REPORT_khelsutra-guru_2026-07-02): a bucket-poll timeout
abandons a still-running L4 execution.

Summary

****What:**** `CloudRunCompute.run\_infer` blocked on `poll\_until(...)`; when the poll deadline
(`max\_wait\_sec`, default 1800s) hit, `PolicyTimeout` propagated straight to `main.py`'s dispatch
handler, which marked the local job terminal-failed. Nothing cancelled the still-running Cloud
Run execution (it kept billing the L4 until the job's `--task-timeout 3600`), and because the
poll budget undercuts the task budget, a slow-but-healthy 30-60 min inference ***systematically***
ended as a local "cloud dispatch error" while its late done-marker + outputs were silently
wasted.

****How (on `PolicyTimeout`):****

- ****ONE** final done-marker check ? a worker that finished just past the poll deadline is
rescued: its completed result is ingested normally (no cancel,

```
##### PR #418 #####
title   : fix(api): /api/source downloads a remote source ONCE into a reusable cache (R1-03)
branch  : fix/api-source-remote-cache -> master
created : 2026-07-02T04:55:50Z  updated: 2026-07-02T04:55:50Z
merge   : CONFLICTING DIRTY
size    : +225/-9 across 2 files, 1 commits
CI      : {'SUCCESS': 11} (11 checks)
--- body (first 900 chars) ---
```

What

Fixes audit finding ****R1-03****: `GET /api/source/{video\_id}` called `storage.acquire\_local\_input`
on ****every**** request, and for a REMOTE-backed video (`gs://` / `s3://` / `gdrive://`) that
meant a fresh `tempfile.mkdtemp(prefix="rally-input-")` + a ****full object download per request****
? never deleted. `FileResponse` serves Range, so one browser scrubbing a `` tag issues
many independent requests to the same URL: ~10 seeks on a 4 GB match ? ~40 GB of bucket egress
****and**** ~40 GB of orphaned temp dirs, with every seek stalling behind a multi-GB download.

Now (`backend/main.py::acquire\_source\_for\_serving`):

- A remote source is fetched **once** into `/source\_cache/<video\_id>/<name>` and every later request streams that local copy.
- **Atomic publish**: the download goes to a unique `

```
##### PR #419 #####
title   : fix(main): --output-dir argparse default no longer clobbers config.json
output.output_dir
branch  : fix/output-dir-config-clobber -> master
created : 2026-07-02T04:57:15Z updated: 2026-07-02T04:57:15Z
merge   : CONFLICTING DIRTY
size    : +225/-12 across 4 files, 1 commits
CI      : {'SUCCESS': 11} (11 checks)
--- body (first 900 chars) ---
```

What

`--output-dir` had argparse default `"output"` and was applied **unconditionally** at `main()` init (`backend/main.py`), so a config-set `output.output\_dir` (the documented knob, `backend/config/models.py::OutputConfig`) could never take effect on the main entry path. The SQLite DB path derives from it, so the server silently created a fresh empty DB under `./output` while `run\_eval.py`/`run\_regression.py` (via `backend.config.default\_db\_path`) resolved the DB from config.json ? split state / perceived data loss. (Audit finding R1-19, 2026-07-02.)

How

- Argparse default is now `None` (= "not passed").
- New pure helper `backend/utils/paths.py::resolve\_startup\_output\_dir(cli\_output\_dir, config)`: an **explicit** CLI `--output-dir` wins; otherwise config.json's `output.output\_dir` is honored via the existing `output\_base()`; **P0a app-home rooting** (`resolve\_output\_dir`) app

```
##### PR #420 #####
title   : docs: reconcile stale trackers/blurbs with shipped state (audit
R1-13/R1-14/R1-01-doc/DATA_IN_GCS)
branch  : docs/reconcile-trackers-2026-07-02 -> master
created : 2026-07-02T04:57:53Z updated: 2026-07-02T04:57:53Z
merge   : CONFLICTING DIRTY
size    : +46/-36 across 7 files, 1 commits
CI      : {'SUCCESS': 11} (11 checks)
--- body (first 900 chars) ---
```

What / why

Docs-only reconcile PR from the 2026-07-02 workspace audit (findings **R1-13**, **R1-14**, the **doc half of R1-01**, the **DATA_IN_GCS §5-vs-§7 contradiction**, and the dropped-pool `yolo\_hybrid` docstring item). The session-start surfaces (DOC_STATUS / docs README / NEXT_STEPS / BACKLOG) had drifted ~15 merged PRs behind the per-doc source-of-truth trackers, which was already causing re-litigation of finished work (the project memory feeding the audit re-listed D13/ByteTrack as open). Every flip below was verified against code/git before writing; **no behavior change**.

- **docs/DOC_STATUS.md** ? cleanup-audit row: Phase 1 COMPLETE (#352?#371) + Phase 2 nearly done (#373?#386), remaining **P10 + P16**; COMPUTE_DECOUPLED_SERVING row: the M5+ default-OFF batch is merged (M5 #286 · M6 #287 · M8 #288 · M9-auth #290, M11 skeleton #336, M12 backend #338), next = M7 (? owner)

21. assistant (2026-07-02T08:15:24.306Z)

Excellent ? mergeability is now computed. Here's the raw picture (all 7 have **green CI** on their original base):

PR	Finding	Mergeable	Size	Hypothesis to verify
---	---	---	---	---
#414	R2-5 docs CLAUDE.md truth-sync	CONFLICTING	1 file	maybe superseded by merged docs work

```
| #415 | R1-20 upload_dir app-home | CONFLICTING | 4 files | handoff says R1-20 "already fixed"
|
| #416 | R1-18 gdrive-api chunked dl/safe put | **CLEAN** | 2 files | P6 ? likely still needed |
| #417 | R1-21 Cloud Run poll-timeout rescue | **CLEAN** | 3 files | P7 ? likely still needed |
| #418 | R1-03 /api/source cache | CONFLICTING | 2 files | likely superseded by **425** |
| #419 | R1-19 --output-dir clobber | CONFLICTING | 4 files | likely superseded by **422** |
| #420 | R1-13/14/01 docs reconcile | CONFLICTING | 7 files | maybe superseded by merged docs |
```

These hypotheses come from the handoff, but per my verify-before-trust discipline I must confirm each against **current master code**, not the memory notes. This is exactly a fan-out+adversarial-verify job. Let me mark the chapter and run a review workflow.

22. user (2026-07-02T08:15:24.989Z)

Chapter marked: "PR fate review". Continue your current work.

23. assistant (2026-07-02T08:15:29.847Z)

Now the review workflow ? one analyst per PR (reads the PR diff + verifies against current master code), then an adversarial verifier per PR that tries to refute the analyst's verdict by checking master directly.

24. user (2026-07-02T08:16:24.694Z)

Workflow launched in background. Task ID: wir3zorot

Summary: Decide fate (take-over vs close-superseded) of 7 open engine PRs vs current master

Transcript dir: C:\Users\avidu\claudu\projects\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\subagents\workflows\wf_793a5d86-1c4

Script file: C:\Users\avidu\claudu\projects\C--Users-avidu-Projects-khelsutra-guru-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\workflows\scripts\pr-fate-review-wf_793a5d86-1c4.js

(Edit this file with Write/Edit and re-invoke Workflow with {scriptPath:

"C:\Users\avidu\claudu\projects\C--Users-avidu-Projects-khelsutra-guru-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\workflows\scripts\pr-fate-review-wf_793a5d86-1c4.js"} to iterate without resending the script.)

Run ID: wf_793a5d86-1c4

To resume after editing the script: Workflow({scriptPath: "C:\Users\avidu\claudu\projects\C--Users-avidu-Projects-khelsutra-guru-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\workflows\scripts\pr-fate-review-wf_793a5d86-1c4.js", resumeFromRunId: "wf_793a5d86-1c4"}) ? completed agents return cached results.

You will be notified when it completes. Use /workflows to watch live progress.

25. assistant (2026-07-02T08:16:30.427Z)

The review workflow is running in the background (7 analysts + 7 adversarial verifiers). I'll be notified when it completes. Let me wait for the results rather than poll.

26. user (2026-07-02T08:16:30.568Z)

please do close or merge th PRs with clear comments based on your analysis and ensure teh audit project work is in line with the docs

27. assistant (2026-07-02T08:17:04.378Z)

Got it ? I'll execute (close or merge each with a clear comment) based on the analysis, and then reconcile the audit-project tracker + docs so they match the final state. I have explicit authority to merge my own engineering-fix PRs on verified-green CI per our working agreement, and you've now authorized the close/merge directly.

Two things I'll hold to while executing:

- **Take-over** PRs get re-verified, not rubber-stamped. The green CI on these ran against a stale base (master has moved ~10 commits via #422?#428). For any PR I take over I'll rebase onto

current master, let CI re-run green, and confirm merge-safety before merging ? not merge on the stale-base check.

- ****Superseded PRs get closed with a comment**** citing the exact merged PR + master evidence that already implements the intent, so the trail is honest.

The review workflow (7 analysts + 7 adversarial verifiers) is still running. I'm waiting for it to land rather than act ahead of the evidence I commissioned ? I'll proceed the moment it completes.

28. user (2026-07-02T08:17:06.647Z)

Next wakeup scheduled for 14:08:00 (in 1253s). Nothing more to do this turn ? the harness re-invokes you when the wakeup fires or a task-notification arrives.

29. assistant (2026-07-02T08:17:08.845Z)

I'll continue as soon as the review workflow reports back.

30. user (2026-07-02T08:20:47.942Z)

<summary>Dynamic workflow "Decide fate (take-over vs close-superseded) of 7 open engine PRs vs
current master" completed</summary>
<result>[{"pr":414,"title":"docs(CLAUDE.md): truth-sync stale Current-state section
(R2-5)","branch":"docs/claude-md-current-state-truth-sync","mergeable":"CONFLICTING","analysis":
{"pr":414,"superseded_by":"421","superseded_confidence":"high","master_evidence":"Current master
CLAUDE.md (HEAD d00b4db) already contains the fully truth-synced section that #414 proposes.
CLAUDE.md:29-42 is \"## Current state (July 2026)\" ? \"Platform slice SHIPPED: async job model
(backend/api/job_worker.py, #339), StorageBackend + ComputeBackend registries ...
(backend/storage/ ...; backend/compute/ ...), ... data flywheel (backend/flywheel.py).
COMPUTE_DECOUPLED_SERVING M0-M9 largely shipped (ADR-014); Gen-0 owned-model weights pushed
(weights/0.1.0-l4/)\" and \"Launch decision: NO-GO (owner, 2026-06-30, #404)\". CLAUDE.md:44-48
\"## Architecture in one breath\" already flips the backends: \"StorageBackend + ComputeBackend
registries are implemented (backend/storage/, backend/compute/; PLATFORM $3 ? realized by
COMPUTE_DECOUPLED_SERVING)\". CLAUDE.md:18-19 already fixes the Gate-A claim: Gate A
\"implemented in backend/eval/served_gate_a.py, default-OFF\". git log for CLAUDE.md shows this
landed via merged PR #421 d80aa02 \"docs: truth-sync ? audit report + fix stale state in
CLAUDE.md, BACKLOG, DOC_STATUS, README, NEXT_STEPS (#421)\", whose commit body explicitly names
the same \"AUDIT_REPORT R2-5\" finding and lists the identical three edits (Current-state
rewrite, Gate-A fix, StorageBackend/ComputeBackend Future->implemented). git merge-base --is-
ancestor confirms d80aa02 IS an ancestor of master HEAD but is NOT contained in
origin/docs/claude-md-current-state-truth-sync (PR #414 forked from e410136, before #421
merged).\", \"conflict_nature\":\"CONFLICTING because master already did the same thing (superseded),
not adjacent edits. git merge-tree against the merge-base (e410136) shows conflict markers on
exactly the three hunks both PRs rewrote: (1) the Gate-A line in \"Rally-detection quality
track\" (master: served_gate_a.py/default-OFF vs #414: fusion_hybrid min_crossings knob/#401);
(2) the entire \"## Current state\" section (master \"July 2026\" vs #414 \"2026-07-01\" ? same
substance: Platform SHIPPED, async jobs, storage/compute backends, Gen-0 weights, NO-GO #404);
(3) the \"## Architecture in one breath\" StorageBackend/ComputeBackend line (both flip
Future->shipped/implemented). All three are direct overlapping rewrites of the identical
stale base text ? the textbook superseded-and-conflicting signature, not rebasable-adjacent
context.\", \"correctness_notes\":\"The PR change itself is well-written, accurate, docs-only, and
all 12 CI checks are green (link-check, ruff, mpy, full test suite, etc.). Its claims are
verifiable against the tree. However it adds nothing material over master's #421 version: both
are truth-synced to the same shipped reality with the same key facts. Two minor points: (a)
#414's Gate-A framing (\"servable opt-in via fusion_hybrid min_crossings knob\") differs from
master's framing (\"implemented in backend/eval/served_gate_a.py, default-OFF\") ? different
emphasis, not a correctness win for #414, and master's file-path reference is equally valid; (b)
#414 uses a specific date \"2026-07-01\" and slightly more inline PR-number detail
```

(#336/#338/#335/#341/#396), which is stylistic, not substantively more correct. No behavior/code change either way.", "recommended_fate": "CLOSE_SUPERSEDED", "rationale": "Merged PR #421 (d80aa02, on master HEAD) already resolved the exact same audit finding (R2-5) with the identical three edits: rewrote CLAUDE.md \"Current state\" from the stale \"No platform implementation has started\" to the shipped reality, fixed the Gate-A \"not wired\" claim, and flipped StorageBackend/ComputeBackend from \"Future\" to implemented. PR #414 forked from e410136 (pre-#421) and re-does the same work with different wording, hence the CONFLICT is on the same overlapping hunks. Master is already up-to-date and accurate; #414 adds no material fact and would require a manual rebase/conflict-resolution to land a near-duplicate section (whose Gate-A phrasing even diverges from master's). Recommend closing as superseded by #421.\"}, \"verify\": {\"pr\": 414, \"agree\": true, \"corrected_fate\": \"CLOSE_SUPERSEDED\", \"finding\": \"Independently verified master HEAD=d00b4db and confirmed #421 (d80aa02) is an ancestor of HEAD via git merge-base --is-ancestor. Read master CLAUDE.md directly: all three edits #414 proposes are already present. (1) CLAUDE.md:18-19 Gate-A line reads \"Gate A ? implemented in backend/eval/served_gate_a.py, default-OFF\" (master fixed the stale \"not wired\" claim; #414 proposes the same fact with different wording: fusion_hybrid min_crossings knob, default 0=OFF, #401). (2) CLAUDE.md:29-42 \"## Current state (July 2026)\" ? \"Platform slice SHIPPED: async job model (backend/api/job_worker.py, #339), StorageBackend + ComputeBackend registries with concrete implementations ... data flywheel (backend/flywheel.py) ... Gen-0 owned-model weights pushed (weights/0.1.0-l4/)\" and \"Launch decision: NO-GO (owner, 2026-06-30, #404)\" ? same substance #414 proposes (its version dated 2026-07-01). (3) CLAUDE.md:44-48 \"## Architecture in one breath\" ? \"StorageBackend + ComputeBackend registries are implemented (backend/storage/, backend/compute/; PLATFORM \$3)\". gh pr diff 414 confirms it is docs-only (touches ONLY CLAUDE.md), so no tests/guards/code in other files would be lost. #414 forked from e410136 (pre-#421, confirmed ancestor of HEAD) and re-does the identical R2-5 audit finding. No material fact is added; its Gate-A phrasing even diverges from master's. Fully superseded by #421.\"}, \"confidence\": \"high\"}}, {\"pr\": 415, \"title\": \"api: root relative security.upload_dir under app home (R1-20, P0a parity)\", \"branch\": \"fix/upload-dir-app-home\", \"mergeable\": \"CONFLICTING\", \"analysis\": {\"pr\": 415, \"superseded_by\": \"422\", \"superseded_confidence\": \"high\", \"master_evidence\": \"Master HEAD d00b4db. The PR's functional intent (route security.upload_dir through resolve_output_dir / app_home in _upload_cfg) is ALREADY present on master: backend/api/uploads.py:53-55 `upload\_dir = resolve\_output\_dir(getattr(sec, 'upload\_dir', None) or 'output/uploads')` with the enabling import at backend/api/uploads.py:24-26 `from backend.utils.app\_home import resolve\_output\_dir`. Introduced by merged PR #422 (commit 4f148d1, `fix: config-correctness + typing fixes (audit R1-19, R1-20, R1-27)`), whose body explicitly states \"R1-20: Fix upload_dir CWD-relative (never app-home-resolved) ... resolve upload_dir through resolve_output_dir() in _upload_cfg, mirroring output_dir.\" `git log -S resolve\_output\_dir -- backend/api/uploads.py` returns only 4f148d1. Resolver semantics validated in backend/utils/app_home.py:36-45 (RALLY_APP_HOME unset -> Path(\".\") CWD-verbatim; set -> relative roots under home) and resolve_output_dir at line 83. The ONLY parts of #415 still absent on master are non-functional: the app-home doc comment in backend/config/models.py:332-336 (master has the old comment, no RALLY_APP_HOME mention), one docs/CODE_MAP.md sentence, and 4 new tests in tests/test_upload_download.py (grep for test_upload_cfg_relative_default_roots_under_app_home / test_upload_lands_under_app_home_not_launch_cwd returns nothing on master).\"}, \"conflict_nature\": \"CONFLICTING because master already did the same thing (superseded), not adjacent edits. PR branch merge-base is e410136 (parent line before #422). Both #415 and #422 edit the IDENTICAL lines: the resolve_output_dir import block and the `upload\_dir = ...` assignment inside _upload_cfg in backend/api/uploads.py. #422's hunk (@@ line ~50) wraps the exact same expression in resolve_output_dir and adds the same import; #415 does the same with only cosmetic differences (single-line import + longer comment). 40         "master_evidence": "Master HEAD d00b4db. The PR's functional intent (route
security.upload_dir through resolve_output_dir / app_home in _upload_cfg) is ALREADY present on
master: backend/api/uploads.py:53-55 `upload_dir = resolve_output_dir(getattr(sec,
`upload_dir`, None) or `output/uploads`)` with the enabling import at
backend/api/uploads.py:24-26 `from backend.utils.app_home import resolve_output_dir`. Introduced
by merged PR #422 (commit 4f148d1, `fix: config-correctness + typing fixes (audit R1-19, R1-20,
R1-27)`), whose body explicitly states `R1-20: Fix upload_dir CWD-relative (never app-home-
resolved) ... resolve upload_dir through resolve_output_dir() in _upload_cfg, mirroring
output_dir.` `git log -S resolve_output_dir -- backend/api/uploads.py` returns only 4f148d1.
Resolver semantics validated in backend/utils/app_home.py:36-45 (RALLY_APP_HOME unset ->
Path(\".\") CWD-verbatim; set -> relative roots under home) and resolve_output_dir at line 83.
The ONLY parts of #415 still absent on master are non-functional: the app-home doc comment in
backend/config/models.py:332-336 (master has the old comment, no RALLY_APP_HOME mention), one
docs/CODE_MAP.md sentence, and 4 new tests in tests/test_upload_download.py (grep for
test_upload_cfg_relative_default_roots_under_app_home /
test_upload_lands_under_app_home_not_launch_cwd returns nothing on master).",
41     "conflict_nature": "CONFLICTING because master already did the same thing
(superseded), not adjacent edits. PR branch merge-base is e410136 (parent line before #422).
Both #415 and #422 edit the IDENTICAL lines: the resolve_output_dir import block and the
`upload_dir = ...` assignment inside _upload_cfg in backend/api/uploads.py. #422's hunk (@@ line
~50) wraps the exact same expression in resolve_output_dir and adds the same import; #415 does
the same with only cosmetic differences (single-line import + longer comment). Overlapping same-
line edits on backend/api/uploads.py are the conflict. models.py/CODE_MAP.md/test hunks are
additive and would not themselves conflict.",
42     "correctness_notes": "The PR change itself is correct and high-quality: it wraps
upload_dir in resolve_output_dir exactly as intended, matches the app_home contract (env unset
-> CWD-verbatim byte-identical; set -> relative rooted under home; absolute passthrough),
```

resolves in `_upload_cfg` so `create_app()`-only entry points are covered, and adds thorough tests (relative-default, absolute-passthrough, env-unset-verbatim, end-to-end chdir landing under home). PR CI is all green. But it is functionally redundant with what already shipped in #422 ? it adds no material behavior change over master.",

```

43         "recommended_fate": "CLOSE_SUPERSEDED",
44         "rationale": "The load-bearing fix (upload_dir routed through resolve_output_dir
in _upload_cfg, plus its import) is already on master via merged PR #422 (4f148d1), which the
branch predates. #415's uploads.py change is byte-equivalent in effect and conflicts precisely
because master already applied it ? the classic two-sessions-same-fix collision. The only
residual deltas are doc comments and extra tests describing/verifying behavior master already
has; they do not justify a rebase of this whole PR. Close as superseded. If the owner values the
extra app-home test coverage and doc-comment polish, cherry-pick just those additive hunks
(tests/test_upload_download.py P0a section + models.py/CODE_MAP.md comment updates) as a tiny
follow-up rather than rebasing #415."
45     },
46     "verify": {
47         "pr": 415,
48         "agree": true,
49         "corrected_fate": "CLOSE_SUPERSEDED",
50         "finding": "Verified on master HEAD d00b4db. The functional core of #415 is
already present: backend/api/uploads.py:24-26 imports resolve_output_dir from
backend.utils.app_home, and uploads.py:53-55 wraps the identical expression `upload_dir =
resolve_output_dir(getattr(sec, `upload_dir`, None) or `output/uploads`)` inside
_upload_cfg. git log -S resolve_output_dir -- backend/api/uploads.py returns only 4f148d1
(merged PR #422). resolve_output_dir semantics validated at backend/utils/app_home.py:83+ and
app_home() at :36-45 (RALLY_APP_HOME unset -> Path(`.`) verbatim; set -> relative under home;
absolute passthrough) ? exactly the PR's P0a intent. The #415 uploads.py hunk is functionally
byte-equivalent (only cosmetic: single-line import + longer comment) and conflicts because
master already applied it on the same lines. Residuals absent on master are all non-functional
and confirmed: backend/config/models.py:333-335 still carries the OLD comment (no RALLY_APP_HOME
mention); docs/CODE_MAP.md lacks the P0a sentence; and the 4 P0a tests
(test_upload_cfg_relative_default_roots_under_app_home /
test_upload_lands_under_app_home_not_launch_cwd / APP_HOME_ENV usage) are not in
tests/test_upload_download.py on master. No stricter guard, different file, or functional gap ?
only doc polish and additive coverage of behavior master already has. Fully superseded by #422;
extra tests/doc are cherry-pick-worthy but do not justify a full rebase.",

63         "master_evidence": "Master @ d00b4db backend/storage/gdrive_api.py is UNCHANGED
from #338 baseline for both hazards the PR fixes. (1) Whole-file buffering: line 144
`self._service.files().get_media(fileId=file_id).execute()` materializes the entire object as
one bytes value, then lines 147-148 `with io.open(dst, `wb`) as fh: fh.write(data)` write
straight to dst ? no chunked MediaIoBaseDownload, no `_downloader` seam, no
`_DOWNLOAD_CHUNK_BYTES`, no `.part`/os.replace anywhere (git grep confirms none of those tokens
exist in the file). (2) Delete-before-upload data-loss window: put() lines 160-170 still do
`existing = self._resolve_id(ref.key); if existing:
self._service.files().delete(fileId=existing).execute()` (line 165) FOLLOWED BY
`self._service.files().create(...)` (lines 166-170) ? deletes first, then creates; no
`files().update` in master. Docstring lines 21-23 still say put 'deletes an existing file at the
same path before creating'. File history (git log) shows gdrive_api.py last touched only by #338
(feat), #360 (isort), #387 (ruff format) ? none of the merged #422-#428 touched it;
tests/test_storage_gdrive_api.py has 10 test fns, none of the PR's 4 new streaming/overwrite-
safety tests present.",
64         "conflict_nature": "clean ? mergeable=MERGEABLE. PR touches only

```

```

backend/storage/gdrive_api.py and tests/test_storage_gdrive_api.py, neither of which was
modified by any merged PR since the PR's base; the diff hunks (fetch_to_local body, put() body,
docstring, new _downloader/_DOWNLOAD_CHUNK_BYTES, new tests) apply to unchanged master regions.
No adjacent-edit or already-done conflict.",
65     "correctness_notes": "Change is correct and high quality. fetch_to_local streams
via a lazy MediaIoBaseDownload seam (_downloader, mirroring the existing _media_body seam) in
32MiB chunks into dst+'.part', then os.replace into place; the try/finally removes the .part on
failure (no-op after a successful os.replace since tmp no longer exists) ? a mid-download
failure leaves no truncated dst that overwrite=False would trust. put() computes media once and
uses files().update(fileId=existing) for re-puts (old bytes survive until the new upload
succeeds, file id preserved, no duplicate-(name,parent) window) and files().create only for
fresh paths ? preserving the #338 idempotent-put contract (exactly one file/path, latest bytes
win). 4 new offline tests exercise chunked streaming (13 next_chunk calls for a 50B/4B-chunk
file), mid-download failure cleanup, id stability across re-put, and old-object survival after a
simulated mid-upload failure. All 12 CI checks are SUCCESS (Ruff, Mypy, full offline test suite,
cross-OS golden fixtures, wheel smoke). Real googleapiclient path is behind #pragma: no cover
and unverifiable locally (library deliberately absent), but the fakes drive the identical
next_chunk()/update()/create() call shapes.",
66     "recommended_fate": "TAKE_OVER_CLEAN",
67     "rationale": "Master still whole-file buffers on download
(get_media().execute(), gdrive_api.py:144) and still deletes-before-create in put() (delete at
:165 then create at :166), exactly the two hazards this PR fixes ? the intent is entirely absent
from master and NOT superseded by any of #422-#428 (none touched this file). PR is MERGEABLE
with all CI green, applies cleanly to current master, is well-tested (4 new offline tests,
+correct .part/os.replace and update-in-place logic), and preserves the existing
StorageBackend/idempotence contract with no caller-facing behavior change. Adopt and merge as-is
after a local full-suite/lint/type re-verify per the pre-LGTM gate."

86         "master_evidence": "Master @ d00b4db, backend/compute/cloud_run.py: (1) Import
block lines 33-37 imports only DEFAULT_POLICY, ExecutionPolicy, poll_until ? NO PolicyTimeout
(PR adds it). (2) CloudRunJobClient ABC lines 50-66 declares ONLY run_job ? no cancel_execution
abstract method (PR adds one). (3) GoogleCloudRunJobClient lines 69-112 implements ONLY run_job
? no cancel_execution impl (PR adds the fully-qualified-name guard +
run_v2.ExecutionsClient().cancel_execution). (4) run_infer lines 173-178 call poll_until(...)
```

with NO try/except ? a PolicyTimeout propagates straight up uncaught; there is NO rescue-or-cancel, NO _handle_poll_timeout method anywhere in the file. So master's CloudRunCompute.run_infer still lets PolicyTimeout propagate WITHOUT cancelling the running Cloud Run execution. Caller backend/main.py:1162-1168 catches it via `except Exception` and marks the job _failed(..., True) ? but the still-running L4 execution keeps billing until --task-timeout, exactly the R1-21 leak. PolicyTimeout symbol confirmed to exist at backend/infrastructure/execution_policy.py:41 (class PolicyTimeout(TimeoutError)), so the PR import is valid.",

87 "conflict_nature": "Clean. GitHub reports MERGEABLE; verified independently. One merged commit (19ebe5a, PR #427) touched cloud_run.py after the PR's merge-base (e4101365), but ONLY the _read_json helper (lines ~216-224: tempfile.mkdtemp -> TemporaryDirectory context manager), which sits BELOW every hunk PR #417 edits (docstring, imports, cancel_execution abstract+impl, run_infer poll_until block, new _handle_poll_timeout inserted before _read_marker). #427 also touched tests/test_compute_backend.py but in non-overlapping regions. `git merge-tree --write-tree origin/master origin/fix/cloud-run-poll-timeout-cancel` produced a clean combined tree (bf5fc42) with ZERO conflict markers in both cloud_run.py and test_compute_backend.py; the merged tree coherently contains BOTH #417's _handle_poll_timeout/PolicyTimeout (lines 240/281) AND #427's TemporaryDirectory (line 303). Not a rebase-blocking conflict ? adjacent, auto-resolvable.",

88 "correctness_notes": "Change is correct and high quality. On PolicyTimeout: one final best-effort _read_marker (storage error there logged and treated as absent, never masking the timeout); if a late marker is present (incl. empty dict {} ? which flows into run_infer's existing empty-marker=failure handling, consistent), rescue it; else best-effort cancel_execution(execution) and re-raise a PolicyTimeout (TimeoutError subclass) chained `from` the original, carrying job+execution name and cancel outcome. Cancel failures are caught and noted, never mask the timeout. Real client's cancel_execution validates the name is fully-qualified (.../executions/...) BEFORE the lazy google-cloud-run import, mirroring the existing #342 project guard (run_job returns literal 'execution' when metadata has no name ? cancelling that would be a bogus API call), so the guard is CI-exercisable. Caller main.py:1166 `except Exception` still catches the re-raised PolicyTimeout -> _failed, so no caller change needed and no happy-path regression (poll-in-budget path byte-identical). 4 new tests cover cancel-with-exact-name, cancel-failure-still-raises, late-marker-rescue-no-cancel, and real-client-rejects-unresolvable-name; happy-path fakes now raise AssertionError from cancel_execution to lock in that cancel never fires off the timeout path. All 12 CI checks green (full offline suite, ruff, mypy, cross-OS golden, wheel smoke). Real GCP cancel path intentionally not CI-tested (SDK not a test dep; owner-verified on next real run) ? same established stance as run_job.",

89 "recommended_fate": "TAKE_OVER_CLEAN",

90 "rationale": "Master still lacks the fix: run_infer lets PolicyTimeout propagate with no cancel, so a bucket-poll timeout abandons a still-running L4 execution that keeps billing to --task-timeout, AND a slow-but-healthy worker's late result is wasted ? the exact R1-21 leak. No merged PR (#422-#428) implements cancel-on-timeout or a rescue check; #427 only refactored the unrelated _read_json temp-dir. The PR is MERGEABLE-clean (verified via merge-tree: zero conflicts, both changes coexist), correct, well-tested, and all CI checks are green. Adopt as-is and merge; the only thing not locally verifiable is the real GCP cancel call, which by project convention is owner-verified on a real run."

91 },

109         "master_evidence": "Master @ d00b4db already implements the entire R1-03 intent,
landed by merged #425 (commit 6c767b5 \"cache remote source material\", which touched the exact
same two files: backend/main.py + tests/test_api_annotations.py). Concrete master citations in
backend/main.py: (a) source-cache dir helper ? lines 608-609 `_source_cache_dir` returns
`<output_base>/source_cache`; (b) per-video serialize lock + guard ? lines 600-601
`_source_cache_locks`/`_source_cache_locks_guard`, lock accessor 638-640; (c) fetch-once-and-
reuse with double-checked cache-hit, free-space guard, atomic publish, and partial cleanup ?
`_cached_remote_source` lines 652-677: cache-hit early return (655-656 and again under lock
659-660), `require_free_bytes(cache_dir, need, stage=\"source-cache\")` before any bytes move
(663-664), fetch to a unique `.<name>.<uuid>.tmp` then `os.replace(tmp, cache_path)` atomic
publish (665-670), `finally` remove-partial (671-676); (d) get_source rewrite ? local ref is
identity passthrough `local = input_ref.key` (731-732), remote goes through
`_cached_remote_source` (733-741) with HTTPException re-raised (507 guard preserved) and other
failures surfaced as 502 (738-741); (e) proxy warming now unconditional for both local and
remote (746-748), closing the 'remote-source proxying is a follow-up' note. Supporting helpers
all present on master: `require_free_bytes` (backend/utils/freespace.py:49),
`resolve_under_root` (backend/utils/paths.py:45), `_remote_input_size_bytes`
(backend/main.py:1479). Master test test_source_caches_remote_fetch_and_warms_proxy_from_cache
(tests/test_api_annotations.py:67-108) asserts len(fetches)==1 across two Range requests, cache
at source_cache/vidremote.mp4, and proxy warmed from the cached copy.",
110         "conflict_nature": "CONFLICTING due to full same-region supersession, not
adjacent edits. Both PR #418 and merged #425 rewrite the identical span of backend/main.py
(helpers around lines 600-698 and the get_source body ~700-748) and add tests to the same block
of tests/test_api_annotations.py. #418 introduces `_acquire_source_for_serving` +
`_source_fetch_locks` + a per-video subdir cache; master already introduced the semantically
equivalent `_cached_remote_source` + `_source_cache_locks` + flat video_id-keyed cache in the
same lines. The PR diff's base (old get_source used
`storage.acquire_local_input`/`input_is_local`) no longer exists on master, so it cannot apply.
The conflict is entirely because master already did the same thing.",
111         "correctness_notes": "The PR change is itself correct and high quality: fetch-
once, double-checked locking, atomic os.replace publish, partial cleanup on failure, 507 free-
space guard before download, 502 on fetch error, local identity passthrough, and remote proxy
warming ? all backed by 6 focused tests, with CI fully green on the PR. But it is functionally
equivalent to what master already ships via #425. Minor design divergence only: #418 caches at
source_cache/<video_id>/<sanitized-remote-name> (per-video subdir) while master caches at
source_cache/<video_id><ext> (flat, video_id-keyed). Master's variant is marginally stronger on
path safety ? it adds resolve_under_root containment (main.py:649) on top of
safe_output_filename and never derives any path component from the untrusted remote object name
(takes only the extension, defaulting to .mp4), whereas #418 sanitizes the remote name into a
subdir. Neither is buggy; #418 adds nothing material that master lacks.",
112         "recommended_fate": "CLOSE_SUPERSEDED",
113         "rationale": "Merged #425 already implements the complete R1-03 fetch-once-into-
source_cache-and-reuse behavior in the exact files #418 targets, including atomic publish, per-
video lock, free-space 507 guard, 502-on-failure, local passthrough, and remote proxy warming.
#418's implementation is equivalent (a few details are actually handled slightly better on
master via resolve_under_root and by not trusting the remote object name). The CONFLICTING
status is pure same-region supersession, so a rebase would leave essentially nothing to add.
Close as superseded by #425."
114     },
115     "verify": {
116         "pr": 418,

```

```

117         "agree": true,
118         "corrected_fate": "CLOSE_SUPERSEDED",
119         "finding": "Independently confirmed master @ d00b4db fully implements R1-03 in
the exact files #418 targets. backend/main.py: _source_cache_dir (608-609) returns
<output>/source_cache; _source_cache_locks + guard (600-601) with accessor _source_cache_lock
(638-640); _cached_remote_source (652-677) does double-checked cache-hit (655-656, 659-660),
require_free_bytes(cache_dir, need, stage=\"source-cache\") BEFORE fetch (663-664), fetch to
unique .tmp then os.replace atomic publish (665-670), finally-remove-partial (671-676);
get_source (700-751) local identity passthrough input_ref.key (731-732), remote via
_cached_remote_source with HTTPException re-raise (736-737) and 502-on-other-failure (738-741),
unconditional proxy warm for both local+remote (745-748). Supporting helpers present:
require_free_bytes (backend/utils/freespace.py:49), resolve_under_root
(backend/utils/paths.py:45), _remote_input_size_bytes (backend/main.py:1479). Master test
test_source_caches_remote_fetch_and_warms_proxy_from_cache
(tests/test_api_annotations.py:67-108) asserts len(fetches)==1 across two Range requests + proxy
warmed from cache. The PR diff base (storage.acquire_local_input/input_is_local in get_source)
no longer exists on master, so it cannot apply ? pure same-region supersession. Minor deltas
that do NOT block closing: master actually adds a stronger path-escape guard
(resolve_under_root) and derives the cache filename from video_id rather than trusting the
remote object name; #418 carries more tests (6 incl. explicit stale-
partial/concurrency/502-retry) but every behavior they assert is already implemented and correct
on master.",

132         "master_evidence": "Master @ d00b4db already implements R1-19 via merged PR #422
(commit 4f148d1, \"fix: config-correctness + typing fixes (audit R1-19, R1-20, R1-27) (#422)\").
(1) backend/main.py:1990-1993 ? `--output-dir` argparse default=None (the exact core change of
#419), help text \"overrides config.json output.output_dir\". (2) backend/main.py:2145-2150 ?
init path: `if args.output_dir is not None: global_config.output.output_dir =
resolve_output_dir(args.output_dir) else: global_config.output.output_dir =
resolve_output_dir(global_config.output.output_dir)` ? semantically identical to #419's
resolve_startup_output_dir(args.output_dir, global_config): CLI wins only when passed, otherwise
config.json output.output_dir is honored, byte-identical \"output\" default preserved. This is
the DB-location path (db_path built at 2153-2155), so the split-state/data-loss bug #419 targets
is already fixed on master. RESIDUAL DELTA: debug-trim path backend/main.py:2079-2081 uses
`resolve_output_dir(args.output_dir or \"output\")` (ignores config when flag absent) whereas
#419 routes it through the helper to honor config there too ? but that path (--trim-
start/--trim-end) is diagnostic-only and does not touch the DB. Cosmetic: OutputConfig comment
backend/config/models.py:275 still reads \"The CLI's --output-dir overrides this at startup\" vs
#419's more precise wording. backend/utils/paths.py on master has NO resolve_startup_output_dir
helper (grep empty); #422 inlined the precedence in main.py instead of adding the helper.",
133         "conflict_nature": "CONFLICTING because master already implements the same fix
(superseded), NOT adjacent edits. git merge-tree against merge-base e410136 reports \"changed in
both\" with conflict markers in backend/main.py (both edited the argparse default and the init
assignment hunks), backend/config/models.py (both edited the OutputConfig comment),
backend/utils/paths.py (#419 adds resolve_startup_output_dir where #422's landed context
differs), and the newly added tests/test_startup_output_dir.py. Every conflicting hunk is the
two PRs implementing R1-19 the same way ? a superseded collision, not rebasable adjacent work.",
134         "correctness_notes": "The #419 change itself is high quality: clean pure helper
resolve_startup_output_dir with correct precedence (explicit CLI > config.json > \"output\"),
P0a app-home rooting preserved, byte-identical default when neither knob set, 12 passing tests
(unit precedence + RALLY_APP_HOME rooting + two real subprocess CLI wiring tests asserting DB
landing), all CI checks green (ruff, mypy, full offline suite, cross-OS golden fixtures, wheel
smoke). No bugs found. Its only advantages over master are (a) routing the debug-trim path

```

through the config-aware helper (master leaves it `args.output\_dir` or `"output\"`, ignoring config on that diagnostic-only, non-DB path) and (b) a more precise OutputConfig doc comment ? both minor and non-material to the R1-19 data-loss bug that master already fixes.",

```

135         "recommended_fate": "CLOSE_SUPERSEDED",
136         "rationale": "The material intent of #419 ? argparse --output-dir default None
so config.json output.output_dir is honored on the main init/DB path ? is already merged on
master via #422 (commit 4f148d1, same R1-19 finding), with semantically identical precedence and
behavior at backend/main.py:1991 and 2145-2150. The CONFLICTING status is precisely because both
PRs edited the same hunks to make the same fix. #419 adds only cosmetic/minor extras (a config-
aware debug-trim path and a tidier comment) that do not affect the DB-location bug it was
created to fix. Recommend closing as superseded. Optional low-value follow-ups if desired: route
the debug-trim path (main.py:2079) through the config value for consistency, and tighten the
OutputConfig comment at models.py:275 ? but neither warrants adopting/rebasing this whole PR."
137     },
138     "verify": {
139         "pr": 419,
140         "agree": true,
141         "corrected_fate": "CLOSE_SUPERSEDED",
142         "finding": "Independently verified on master @ d00b4db (== origin/master). The
material bug of #419 (argparse --output-dir default clobbering config.json output.output_dir on
the DB path) is fully fixed on master via merged #422 (commit 4f148d1, R1-19). (1)
backend/main.py:1990-1992: `default=None`, help `"overrides config.json output.output_dir"` ?
exact core change. (2) backend/main.py:2145-2150: `if args.output_dir is not None:
global_config.output.output_dir = resolve_output_dir(args.output_dir) else: ... =
resolve_output_dir(global_config.output.output_dir)` ? semantically identical precedence to
#419's resolve_startup_output_dir; feeds db_path at 2153-2155, so the split-state/data-loss bug
is fixed. (3) grep for resolve_startup_output_dir on master is empty ? #422 inlined the
precedence instead of adding #419's helper. Confirmed residuals #419 carries that master LACKS:
(a) tests/test_startup_output_dir.py does NOT exist on master (ls: No such file), and #422's
diff touched only main.py/uploads.py/gcs.py with ZERO test additions ? existing tests
(test_server_entrypoint.py) all pass --output-dir explicitly and test_config.py:260 only checks
the model field, so master has NO subprocess regression guard for the args.output_dir-is-None
(config-honored) branch that #419 adds (182 lines, 2 end-to-end CLI tests). Correction to
analyst: analyst framed extras as merely 'cosmetic' but the missing regression test is a real
coverage gap on master, not cosmetic. (b) debug-trim path main.py:2079-2081 uses
resolve_output_dir(args.output_dir or `"output"`) (diagnostic --trim only, no DB) vs #419
routing through config. (c) OutputConfig comment models.py:275 still 'The CLI's --output-dir
overrides this at startup'. CONFLICTING confirmed: merge-base e410136; both PRs edited the same
argparse-default + init-assignment hunks. None of the residuals is the bug #419 targets (fully
on master); they are optional test/consistency follow-ups, not grounds to rebase the whole PR.",

(e517475), which reconciled the SAME audit findings. SUPERSEDED hunks (4 files master changed
since base ? `git diff --numstat e410136 HEAD`: BACKLOG 4+/4-, DOC_STATUS 5+/3-, README 4+/3-,
NEXT_STEPS 2+/1-): (1) docs/BACKLOG.md:34 already `"? DONE 2026-06-27 (#386)... supervision cap
lifted (supervision>=0.21.0)` and lines 25-26 already reconcile the app-factory (create_app
#370, no lifespan) + WSL/Gemini-GC (#380 shipped, retention remains) rows; #420's `"? PARTIAL`"
versions restate the same facts. (2) docs/DOC_STATUS.md:47 already has the
DECISION_SNAPSHOT_REGRESSION row (#420 claimed it was `"missing entirely")`, :43 CODE_CLEANUP
row reconciled, :26 COMPUTE_DECOUPLED `"M1?M9 LARGELY SHIPPED", :3 `"Last full review:
2026-07-02`. (3) docs/README.md:42 already off `"DRAFT, owner-gated"; :44 already off
`"decisions in §2 need locking`. (4) docs/NEXT_STEPS.md:1,5,6 already rewritten to `"M0?M9
LARGELY SHIPPED"; stale `"owner M0 design sign-off pending" gone. STILL-UNAPPLIED / NOT

```

```

superseded (3 files master never touched, numstat=UNCHANGED): (a)
backend/pipeline/segmenters/yolo_hybrid.py:12-13 STILL \"supervision's MIT-licensed ByteTrack\"
? #386 never fixed the docstring. (b) docs/DATA_IN_GCS.md:120-124 $5 gap table STILL ? for
trajectories/manifest/labels, contradicting $3:68 (\"Phase-1 landed 2026-06-22\"), $7:188-192,
$8:199. (c) docs/CODE_CLEANUP_AUDIT_2026-06-24.md:10 STILL \"$7 progress tracker is the source
of truth\" though the tracker header is \"## 6. Deliverables & progress tracker ? source of
truth\" (:174); P10 row :198 still \"~1450 lines / ? / ?\" with no #390 note. #420's README
fact-fixes (\"35 findings\" and \"$6\") are correct & unapplied (audit $9:261 \"total of 35\";
tracker is $6).\",
156     \"conflict_nature\": \"CONFLICTING on exactly the 4 files master edited since the
PR base (BACKLOG.md, DOC_STATUS.md, README.md, NEXT_STEPS.md) ? and on those files the conflict
is because master ALREADY performed the same reconciliation via #421/#423 (superseded), not
adjacent edits. The other 3 touched files (yolo_hybrid.py, DATA_IN_GCS.md,
CODE_CLEANUP_AUDIT_2026-06-24.md) are UNCHANGED on master since the base, so those hunks would
apply cleanly and carry real, still-unapplied value.\",
157     \"correctness_notes\": \"Docs-only + one docstring; no runtime paths touched; PR CI
was all-green when opened. Factual claims verified against master: requirements.txt:18/29
(supervision>=0.21.0, trackers @ git+...@2.5.0), #386 done, #390 still OPEN+CONFLICTING+DIRTY,
audit tracker really is $6, findings total really is 35, DATA_IN_GCS $3/$7/$8 confirm metadata
in-bucket 2026-06-22 while $5 still shows ?. ONE staleness defect: #420 states backend/main.py
is \"2198 lines as of 2026-07-02\", but current master main.py is 2360 lines (grew under
#422?#428 after the PR branched at e410136). Adopting the CODE_CLEANUP hunk verbatim would re-
introduce an already-wrong number ? the 2198 figure must be re-measured to 2360 during rebase.
The yolo_hybrid.py and DATA_IN_GCS.md corrections are accurate as written.\",
158     \"recommended_fate\": \"TAKE_OVER_REBASE\",
159     \"rationale\": \"Roughly 4/7 files are fully superseded by #421/#423 (same audit
findings R1-13/R1-14, same reconciliations) and must be dropped ? the DOC_STATUS
DECISION_SNAPSHOT row #420 calls \"missing\" already exists, ByteTrack is already flipped,
NEXT_STEPS \"Where we are\" and README blurbs are already reconciled. But 3 files carry genuine,
still-unapplied fixes that master does NOT yet have: (1) the yolo_hybrid.py docstring still
wrongly says \"supervision's MIT-licensed ByteTrack\" (a licensing-accounting error #386 left
behind); (2) DATA_IN_GCS $5's gap table still self-contradicts $3/$7/$8 by showing metadata as ?
though it landed in-bucket 2026-06-22; (3) CODE_CLEANUP_AUDIT still has the $7?$6 anchor bug and
a stale P10 row (no #390-stale note, wrong main.py size). These three are worth keeping. Not
CLOSE_SUPERSEDED (real residual value) and not TAKE_OVER_CLEAN (4 files conflict + a stale line-
count). Recommend re-cutting a small PR from origin/master that keeps only the yolo_hybrid.py,
DATA_IN_GCS.md, and CODE_CLEANUP_AUDIT hunks, drops the four superseded files, and refreshes the
main.py size from 2198 to the current 2360.\"
160     },
161     \"verify\": {
162         \"pr\": 420,
163         \"agree\": true,
164         \"corrected_fate\": \"TAKE_OVER_REBASE\",
165         \"finding\": \"Independently verified against master (d00b4db) with base e410136.
git diff --numstat base..HEAD confirms ONLY 4 of the 7 PR files changed on master (BACKLOG 4/4,
DOC_STATUS 5/3, NEXT_STEPS 2/1, README 4/3) ? reconciled by #421 (d80aa02) and #423 (e517475).
Same-intent supersession confirmed: DOC_STATUS.md:49 already HAS the
DECISION_SNAPSHOT_REGRESSION row (#420 wrongly claimed \"missing entirely\"); :3 \"Last full
review 2026-07-02\"; :33 \"M1?M9 LARGELY SHIPPED\"; :47 CODE_CLEANUP row reconciled w/ P10+#390.
BACKLOG.md:34 already \"? DONE 2026-06-27 (#386)... supervision cap lifted
(supervision>=0.21.0)\". NEXT_STEPS.md:6 \"M0?M9 LARGELY SHIPPED\", stale M0-signoff gone.
README DECISION_SNAPSHOT/CODE_CLEANUP blurbs reconciled. The 3 UNCHANGED files carry real,
still-unapplied value: (a) backend/pipeline/segmenters/yolo_hybrid.py:12-13 STILL
\"supervision's MIT-licensed ByteTrack\" (master unchanged since base ? #386 left the
docstring); (b) docs/DATA_IN_GCS.md $5 gap table (:118-124) STILL ?? for
trajectories/manifest/labels, contradicting $3:66 \"Phase-1 landed 2026-06-22\"; (c)
docs/CODE_CLEANUP_AUDIT_2026-06-24.md:10 STILL \"$7 progress tracker is the source of truth\"
though header at :174 is \"## 6. Deliverables & progress tracker\", and P10 row :198 still
\"~1450 lines... ? ... ?\" with no #390 note. Stale-line-count check: backend/main.py is 2360
lines now (not 2198 in #420's README) ? analyst's refresh note correct. Minor nuance: README:42
on master still says \"33 findings\"/\"$7\" so #420's \"35\"/\"$6\" fix (audit $9:261 confirms
\"total of 35\") is also genuinely unapplied there ? but README overall conflicts on the
superseded blurbs, so the file still can't apply clean. Split of 4-superseded / 3-clean-carry
holds.\"\",

33. assistant (2026-07-02T08:22:29.262Z)

Both the analyst and the adversarial verifier **agree on all 7 PRs, all high-confidence**.
Here's the decision matrix:

PR	Finding	Verdict	Evidence
##414	docs CLAUDE.md truth-sync R2-5	CLOSE ? superseded by merged ##421	master `CLAUDE.md:18-48` already has the identical truth-synced content
##415	upload_dir app-home R1-20	CLOSE ? superseded by merged ##422	master `backend/api/uploads.py:24-26,53-55` already routes `upload_dir` through `resolve_output_dir`
##416	gdrive-api chunked dl / safe put R1-18	TAKE OVER & MERGE ? not superseded	master `gdrive_api.py:144` still whole-file buffers + deletes-before-create; clean merge, CI green
##417	Cloud Run poll-timeout rescue R1-21	TAKE OVER & MERGE ? not superseded	master `cloud_run.py:173` still lets `PolicyTimeout` propagate, never cancels the L4 exec; clean merge
##418	/api/source cache R1-03	CLOSE ? superseded by merged ##425	master `main.py:600-748` already fetch-once + `source_cache` + atomic publish (master's is actually slightly safer)
##419	--output-dir clobber R1-19	CLOSE ? superseded by merged ##422	master `main.py:1990-2150` already defaults `--output-dir` to None + honors config
##420	docs reconcile R1-13/14/01	CLOSE + carry residual ? 4/7 files superseded by #421/#423; 3 files carry real still-unapplied fixes see below	

Plan: close the 4 superseded PRs with cited comments; refresh?re-verify(CI)?merge #416/#417;
close #420 and carry its 3 genuinely-unapplied fixes into a fresh docs PR; then reconcile the
audit health-plan tracker.

Let me kick off the CI re-run on #416/#417 (so it runs while I work), re-confirm live PR state,
check the merge method, and read the health-plan tracker.

34. user (2026-07-02T08:22:36.214Z)

```

35. assistant (2026-07-02T08:22:43.264Z)

State confirmed ? all 7 still open, #416/#417 mergeable. Let me read the health-plan tracker to understand its structure before I touch it, then start executing.

36. user (2026-07-02T08:22:43.764Z)

```
1      # khelsutra-guru health remediation plan
2
3      > **Status:** `IN PROGRESS` ? audit complete; docs-only tracking bootstrap . **Owner:**
Avi . **Created:** `2026-07-02` . **Last updated:** `2026-07-02`
4      > **Lifecycle:** `DRAFT -> IN PROGRESS -> DONE -> archived` (move to `docs/archives/`
when DONE)
5      > **Tracking anchors:** Section 7 progress tracker is the source of truth; indexed in
`docs/README.md`; lifecycle row in `docs/DOC_STATUS.md`; live checkpoint in memory `current-
state`.
6      > **Relation to existing docs:** extends `docs/AUDIT_REPORT_khelsutra-
guru_2026-07-02.md`; peer-of `docs/CODE_CLEANUP_AUDIT_2026-06-24.md`; coordinates sibling repos
under `C:\Users\avidu\Projects\khelsutra-guru`.
7      > **Honesty note:** statuses below reflect code/docs checked after pulling all five
repos to origin head on 2026-07-02. The audit report remains a snapshot against earlier SHAs;
this plan is the live tracker.
8
9      ---
10
11     ## 0. TL;DR
12
13     The multi-repo audit found real debt, but several items were already fixed by the time
this plan was created. This doc is the execution board for bringing the five-repo workspace back
to a healthy state without mixing unrelated changes: first a docs-only tracking PR, then small
wave PRs, each branched from the remote default branch, verified against that repo's CI
contract, and merged only when green.
14
15     Highest-risk remaining themes: paid/egress cost leaks in the engine, temp/scratch
lifecycle, one failed mypy fix, stale vendored SPA bundle, missing CI/supply-chain gates in
sibling repos, and user-facing SPA processing resilience. Owner-gated work stays flagged, not
silently executed.
16
17     ## 1. Problem & goal
18
19     The audit at `docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md` confirmed a broad health
gap across:
20
21     - `badminton-highlight-indexer/` ? engine correctness, resource lifecycle, supply-chain
```

pinning, CI drift, docs governance.

22 - `khelsutra/` ? SPA processing UX, stale engine bundle, stale issue/docs references, E2E coverage gaps.

23 - `sports-data-collector/` ? CI maturity, dirty workspace artifact policy, corpus registry integrity.

24 - `rally-annotator/` ? browser-extension performance/localization fixes, remaining provenance/i18n-quality issues.

25 - `sports-obsreport/` ? no CI and a small customer-facing pluralization defect.

26 - Non-git data dirs ? Roora pilot artifacts and screencast evidence need durable handling.

27

28 Goal: turn the audit into a sequence of reviewable, green PRs that closes the actionable engineering debt, records owner-gated items honestly, and leaves the workspace with current docs, reliable local checks, and no hidden "fresh checkout breaks immediately" traps.

29

30 ## 2. Decisions locked

31

#	Decision	Source / date	Implication
D1	Work from `C:\Users\avidu\Projects\khelsutra-guru` as the multi-repo root. Owner directive in synced memory, 2026-06-29. Touch each sub-repo separately; pull/fetch before reading or branching.		
D2	One small PR per coherent work item; no PR stacking. `CLAUDE.md` + synced memory working agreements. Waves below are sequencing groups, not giant branches.		
D3	Branch from the remote default branch explicitly. Global git safety rule. Use `git fetch origin` then `git checkout -b <branch> origin/<base>` for every repo.		
D4	Stage explicit paths only. Shared-checkout incident record. Never use `git add -A`, `.` , or `-u` in this workspace.		
D5	Coverage and CI gates must not regress. Owner pre-LGTM rule + repo CI contracts. Every code PR records which full/CI-equivalent checks ran, current floor, and any unavoidable skip.		
D6	SPA/UI changes require visual proof. Owner request, 2026-07-02. Any `khelsutra/web`, `site`, or extension UI PR must include validated Playwright screenshots/screencast evidence, stored under the existing workspace `khelsutra-screencast/` convention when applicable.		
D7	Owner-gated work is tracked, not executed. Repo guardrails. Cloudflare dashboard cleanup, launch signoff, legal/licensing, corpus promotion, and large media upload decisions remain explicit owner gates.		
D8	First PR is docs-only. Owner request, 2026-07-02. This plan, index/register updates, and audit-status notes land before code waves.		

42

43 ## 3. Current status after syncing

44

45 All five git repos were fast-forwarded to origin head on 2026-07-02:

46

Repo	Head after sync	Working tree	Notes
`badminton-highlight-indexer`	`4f148d1`	clean	before this branch Audit report now tracked; doc truth-sync landed; config fixes landed.
`khelsutra`	`41c9627`	clean	Retired-droplet docs updated.
`rally-annotator`	`ef97739`	clean	DOM-scan and locale-persistence fixes landed.
`sports-data-collector`	`9ce5a20`	dirty	`.gitignore` hunk pre-exists Nested stale clone is gone; `obsreport` dependency-confusion fix landed.
`sports-obsreport`	`1f72c1c` / tag `v0.1.3`	clean	Still has no CI.

54

55 Already completed after the audit snapshot:

56

Audit item	Status	Evidence
`R2-5` engine `CLAUDE.md` stale state	Done	Engine PR `#421`, `d80aa02`.
`R1-13` engine `BACKLOG.md` shipped items stale	Done	Engine PR `#421`, `d80aa02`.
`R1-14` engine `DOC_STATUS` / docs index stale	Mostly done	Engine PR `#421`, `d80aa02`; this plan adds the missing audit project tracking.

```

62      | `R1-19` `output.output_dir` clobbered | Done | Engine PR `#422`, `4f148d1`. |
63      | `R1-20` `upload_dir` CWD-relative | Done | Engine PR `#422`, `4f148d1`. |
64      | `R1-06`, `R1-09`, `R1-36` retired-droplet docs | Done | Khelsutra PR `#142`,
`41c9627`. |
65      | `R2-1` rally-annotator hidden panel scans DOM | Done | Rally-annotator PR `#27`,
`ef97739`. |
66      | `R2-2` rally-annotator locale persistence | Done | Rally-annotator PR `#27`,
`ef97739`. |
67      | `R2-3` collector `obsreport>=0.1.3` dependency confusion | Done | Sports-data-
collector PR `#57`, `9ce5a20`. |
68      | `R1-10` stale nested collector clone | Locally resolved | Directory absent after
sync/cleanup; not a durable repo change. |
69      | Critic addition: engine `.git` loose video blobs | Locally resolved | `git count-
objects -vH` now shows packed repo about 11 MiB, no garbage. |
70      | Critic addition: stale yt-dlp partial debris | Locally resolved | `data/videos` has no
`*.part`/`*.ytdl` debris in this checkout. |
71
72      Pushback / reclassification:
73
74      | Audit item | Revised status | Reason |
75      |---|---|---|
76      | `R1-27` misplaced type-ignore in `gcs.py` | Still open; attempted fix failed | Running
`python -m mypy backend training --no-incremental` with `google-cloud-storage` installed still
fails at `backend/storage/gcs.py:31`. |
77      | `R2-8` upload retention scheduling | Still open, downgraded premise | Scheduling is
missing, but the "live droplet accepting uploads" premise is stale after droplet retirement.
Treat as hosted-deployment readiness, not an active droplet incident. |
78      | `R1-01` main.py line count | Still open, number changed | `backend/main.py` is now
about 1965 lines after recent fixes, still large; `backend/orchestration.py` absent; PR `#390`
remains open/stale. |
79      | Audit itself | Snapshot, not live tracker | It was verified against pre-sync SHAs; use
this plan for live execution status. |
80
81      Newly noted while reconciling:
82
83      - `docs/CODE_MAP.md` still describes `main()` as assigning
`global_config.output.output_dir = args.output_dir`; that should be updated after `#422`.
84      - Engine `pyproject.toml` / `requirements.txt` still reference `avidullu/sports-
obsreport` via redirect and a mutable tag.
85      - `rally-annotator` local remote still points at `avidullu/rally-annotator.git`; code
sync works via redirect, but it is stale hygiene.
86
87      ## 4. Execution design
88
89      ### Wave model
90
91      Each wave is a theme for scheduling; each row in section 7 is an independent PR. A later
wave can begin only when it does not conflict with active uncommitted work in the same repo.
92
93      - **Wave 0 ? tracking and truth sync:** this docs-only PR.
94      - **Wave 1 ? engine cost/correctness:** paid re-bill, remote-source egress, ffmpeg
timeouts, failed mypy fix.
95      - **Wave 2 ? engine resource durability:** temp scratch lifecycle, GDrive API
streaming/safe put, Cloud Run timeout handling, upload retention scheduling.
96      - **Wave 3 ? supply-chain and CI gates:** SHA pins, lock/constraints plan, obsreport CI,
sports-data-collector ruff/coverage, khelsutra E2E CUJ, workflow dedupe.
97      - **Wave 4 ? UX/UI resilience:** vendored SPA bundle, job resume/progress, upload
filename, demo-grid hiding, HTML 5xx handling, WhatsApp file share. This wave carries the
screenshot requirement.
98      - **Wave 5 ? structural debt:** close/re-cut `#390`, continue `main.py` split, then
shim/cycle cleanup and database split only after behavior fixes settle.
99      - **Wave 6 ? issue hygiene and archival:** close/update stale issues, archive terminal
docs only after due diligence.
100
101      ### Verification policy

```

```

102
103     For every code PR:
104
105     - Run the repo's normal CI-equivalent checks locally when feasible, or cite the green CI
rollup and run only local checks that CI cannot cover, matching the repo's review policy.
106     - Preserve or raise coverage floors. Never lower a coverage floor without owner
approval.
107     - Install missing test dependencies if the suite otherwise fails to collect; record
unavoidable private/GPU/real-video skips.
108     - For engine PRs, default target is `python run_all_tests.py --cov=backend
--cov=training --cov-report=term --cov-fail-under=70`, `ruff check .`, and `mypy backend
training`, adjusted only for documented CI-policy exceptions.
109     - For `kheksutra/web` PRs, run typecheck, coverage, build, and any relevant Playwright
CUJ; create/validate screencast evidence for UI behavior.
110     - For visual/UI PRs, attach the screencast or screenshots in the PR body and store
durable artifacts under the existing `kheksutra-screencast/` workflow when the repo's harness
supports it.
111
112     ## 5. Risk table
113
114     | Risk | Where it bites | Mitigation |
115     |---|---|---|
116     | Shared checkout absorbs sibling changes | All repos | Fetch/branch from
`origin/<base>`, re-verify branch + HEAD before staging, stage explicit paths. |
117     | Docs-only PR accidentally includes local WIP | Especially collector `.gitignore` |
First PR touches engine docs only; later collector PR stages explicit paths and handles
`.gitignore` deliberately. |
118     | Engine behavior fixes conflict with stale `#390` | `backend/main.py` | Land
correctness/resource fixes first, then close/re-cut the split from fresh `origin/master`. |
119     | UI fixes regress layout or localized text | `kheksutra/web`, `site`, extension UI |
Unit/e2e coverage plus Playwright screenshots/screencast validation. |
120     | Local cleanup looks durable but is machine-only | untracked debris / `.git` gc |
Record local-only as local-only; add durable ignore/cleanup tests only when needed. |
121     | Owner-gated work gets blended into engineering PRs | Cloudflare, corpus, legal, launch
| Keep gate rows marked `Gated? Owner`; PRs may document but not perform. |
122
123     ## 6. Honest limits
124
125     A green docs-only PR proves only that the project is tracked and links are valid. It
does not fix runtime debt.
126
127     A green unit suite does not prove GPU, WSL, real-video, Cloudflare, Google Drive
desktop, or GCS bucket behavior unless the PR explicitly runs those paths or records owner
verification.
128
129     Screencasts prove rendered behavior for the captured viewport and flow; they do not
replace automated tests. Any UI PR that fixes a bug must still add or update deterministic tests
where feasible.
130
131     ## 7. Deliverables & progress tracker
132
133     Legend: Todo = not started; In progress = active branch/PR; Done = merged or locally
completed as labeled; Blocked = owner/external. One small PR per row, no stacking.
134
135     | ID | Wave | Deliverable | Repo | Depends on | Gated? | Status | PR |
136     |---|-----|-----|-----|-----|-----|-----|----|
137     | P0 | 0 | Create this tracked project doc; index it in `docs/README.md`; add
`DOC_STATUS.md` row; add live `NEXT_STEPS.md` pointer; add audit snapshot note. | engine | ? |
No | Done | #423 |
138     | P1 | 1 | Fix failed `R1-27` mypy issue in `backend/storage/gcs.py`; prove with full
mypy gate where optional GCS dep is installed. | engine | P0 | No | Done | #428 |
139     | P2 | 1 | Fix `/api/process` idempotency for already-processed videos; add explicit
force/reprocess path; close `#340` and likely `#330`. | engine | P0 | No | Done | #424 |
140     | P3 | 1 | Cache/reuse remote source material for `/api/source` and annotation proxy;
stop per-Range full-object fetches. | engine | P0 | No | Done | #425 |

```

141 | P4 | 1 | Add timeouts to serving-path ffmpeg/ffprobe subprocesses and map timeout failures cleanly. | engine | P0 | No | Done | #426 |

142 | P5 | 2 | Delete scoped remote-input scratch dirs or move them under a swept app-home temp root; cover process/compile/assets/CLI/cloud marker reads. | engine | P3 | No | Done | #427 |

143 | P6 | 2 | Stream `GDriveApiStorage.fetch\_to\_local` and make overwrite safe via update/temp-create semantics. | engine | P0 | No | Todo | ? |

144 | P7 | 2 | Add best-effort Cloud Run execution cancellation or late-marker salvage on poll timeout. | engine | P0 | Real Cloud verification owner; fake-client PR not gated | Todo | ? |

145 | P8 | 2 | Package upload-retention scheduling docs/unit/timer wrapper for future hosted deployments. | engine and/or khelsutra deploy docs | P0 | Enabling on live infra owner-gated | Todo | ? |

146 | P9 | 3 | Pin `trackers` to immutable commit SHA and single-source/refactor duplicated install literals. | engine | P0 | No | Todo | ? |

147 | P10 | 3 | Update engine `obsreport` dependency URL to `Khelsutra/` and immutable tag/commit convention. | engine | P0 | No | Todo | ? |

148 | P11 | 3 | Add minimal CI to `sports-obsreport` and fix `\_plural("match", 3)` customer text. | sports-obsreport | P0 | No | Todo | ? |

149 | P12 | 3 | Add `ruff` and coverage gate to `sports-data-collector`, fixing current ruff findings first. | sports-data-collector | P0 | No | Todo | ? |

150 | P13 | 3 | Resolve collector stale `.gitignore` artifact hunk deliberately: commit correct manifest-preserving pattern or discard after owner direction. | sports-data-collector | P0 | Minor owner direction | Todo | ? |

163 | P26 | 6 | Update or close stale GitHub issues: `#97`, `#101`, `#103`, `#388`, `#175`, `#301`, related duplicates. | mixed | Relevant PRs merged | Owner issue disposition where needed | Todo | ? |

164 | P27 | 6 | Back up Roora pilot non-video artifacts to the corpus archive and update `DATA\_IN\_GCS.md`. | engine/non-git | P0 | Videos upload owner-gated; metadata archive not gated | Todo | ? |

165 | P28 | 6 | Verify/hash six owned golden source videos from `F:` and record durable MD5/path metadata; do not upload 38 GB without owner approval. | sports-data-collector/non-git | Owner mounts F: | Upload scope owner-gated | Blocked | ? |

166

167 ## 8. Open questions ? owner / external

168

169 1. For `sports-data-collector/.gitignore`, should model artifacts ever live in that repo, or should the WIP hunk be discarded because artifacts belong only in the engine repo?

170 2. For Roora pilot backup, approve metadata/CVAT CSV archive to GCS now? The plan treats this as low-cost/non-gated, but it still writes to the corpus bucket.

```

171     3. For the six owned source videos, should Phase 2 upload full 4K sources or only
proxies once `F:` is mounted and hashes are recorded?
172     4. For upload-retention scheduling, should the default hosted wrapper be time-window-
only, or should it skip files referenced by non-terminal job rows?
173     5. For SPA/UI PR evidence, should durable screencasts be checked into docs/artifacts, or
kept in the existing non-git `khelsutra-screencast/` artifact sink with PR links?
174
175     ## 9. Definition of done
176
177     - [ ] All non-owner-gated P0/P1/P2/P3 audit findings either resolved, explicitly
reclassified, or moved into a narrower tracked project.
178     - [ ] Every code repo has a credible local/CI quality gate for its size: tests, lint,
type checking where appropriate, and coverage floor where feasible.
179     - [ ] Engine cost leaks and scratch leaks are fixed or guarded.
180     - [ ] Engine vendored SPA bundle is current or has a durable staleness signal.
181     - [ ] SPA processing UX survives refresh and gives testers visible job/file state.
182     - [ ] UI-visible PRs include validated visual artifacts and deterministic tests where
feasible.
183     - [ ] Stale deployment docs/issues no longer direct future sessions at retired
infrastructure.
184     - [ ] Owner-gated items remain clearly labeled and have no accidental code/data
mutation.
185     - [ ] This doc's section 7 rows are updated with merged PR numbers.
186     - [ ] `Status` flips to `DONE`, inbound references are updated, and the doc is archived
per `DOC_STATUS.md` section 2.
187

212     ### Changelog
213
214     - `2026-07-02` ? Created from the multi-repo audit and post-sync reconciliation; added
completed-item ledger, pushback, wave plan, verification policy, and screencast requirement.
215

```

37. assistant (2026-07-02T08:24:03.387Z)

Now I understand the tracker. Key mappings:

- ****P6**** (Todo) = #416 (GDrive stream/safe-put, R1-18) ? will become Done
- ****P7**** (Todo) = #417 (Cloud Run cancel/salvage, R1-21) ? will become Done

- The 4 close-targets (#414/#415/#418/#419) are duplicates of rows already marked ****Done**** in §3 (R2-5 via #421, R1-20 & R1-19 via #422, R1-03/P3 via #425) ? closing them is fully consistent with the tracker.
- #420's 3 residuals (yolo_hybrid docstring R1-14, DATA_IN_GCS §5 contradiction, CODE_CLEANUP_AUDIT §6/§7 anchor + P10) are still genuinely unapplied.

Let me start executing. First, refresh #416/#417 onto current master to trigger a fresh CI run (so I merge on **current**-base green, not the stale check), then close the 4 superseded PRs with cited comments.

38. user (2026-07-02T08:24:11.916Z)

```
=== refresh #416 onto current master (triggers fresh CI) ===
? PR branch updated
=== refresh #417 onto current master ===
? PR branch updated
```

39. assistant (2026-07-02T08:24:21.953Z)

Branches refreshed ? fresh CI is now running against current master for #416/#417. Now let me close the 4 superseded PRs with evidence-cited comments. I'll write each comment to a file, then close.

40. assistant (2026-07-02T08:24:28.564Z)

Closing as ****superseded by #421**** (``d80aa02``, already on ``master``).

The R2-5 truth-sync this PR performs was landed independently by #421, which rewrote the same three ``CLAUDE.md`` sections to the same shipped reality:

- ****`## Current state`**** ? flipped from the stale "no platform implementation started" to the shipped platform slice (async job model #339, ``StorageBackend`/`ComputeBackend`` registries, data flywheel, Gen-0 weights, NO-GO #404).
- ****Gate-A line**** ? now ``implemented in backend/eval/served_gate_a.py, default-OFF``.
- ****`## Architecture in one breath`**** ? ``StorageBackend`/`ComputeBackend`` flipped Future ? implemented.

``master`` ``CLAUDE.md:18-48`` already contains this content, so the PR is **CONFLICTING** purely because it rewrites the same hunks ? it adds no material fact over #421 (and its Gate-A phrasing actually diverges from master's).

Verified by independent review + adversarial re-check against ``master@d00b4db`` (both high-confidence). No residual value to carry forward.

41. user (2026-07-02T08:24:28.606Z)

File created successfully at: `C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\close-414.md` (file state is current in your context ? no need to Read it back)

42. assistant (2026-07-02T08:24:36.380Z)

Closing as ****superseded by #422**** (``4f148d1``, already on ``master``).

The load-bearing R1-20 fix ? routing ``security.upload_dir`` through ``resolve_output_dir()`` in ``_upload_cfg`` ? is already on ``master``:

- ``backend/api/uploads.py:24-26`` imports ``resolve_output_dir`` from ``backend.utils.app_home``;
- ``backend/api/uploads.py:53-55`` wraps ``upload_dir = resolve_output_dir(getattr(sec, "upload_dir", None) or "output/uploads")`` ? the exact P0a parity this PR implements.

``git log -S resolve_output_dir -- backend/api/uploads.py`` shows only ``4f148d1`` (#422). This PR's ``uploads.py`` change is byte-equivalent in effect and **CONFLICTING** on the same lines.

The only residuals not on master are **non-functional** (a doc-comment in ``backend/config/models.py``, a ``docs/CODE_MAP.md`` sentence, and 4 P0a tests in ``tests/test_upload_download.py``). If that extra coverage is wanted, it can be cherry-picked as a tiny follow-up ? it doesn't justify rebasing this PR.

Verified by independent review + adversarial re-check against ``master@d00b4db`` (both high-confidence).

43. user (2026-07-02T08:24:36.413Z)

File created successfully at: C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\close-415.md (file state is current in your context ? no need to Read it back)

44. assistant (2026-07-02T08:24:45.268Z)

Closing as **superseded by #425** (``6c767b5``, already on ``master``).

The full R1-03 fetch-once-into-``source_cache``-and-reuse behavior is already on ``master`` in the exact files this PR targets (``backend/main.py`` + ``tests/test_api_annotations.py``):

```
- `backend/main.py:608-609` `_source_cache_dir` ? <output>/source_cache`;  
- :652-677` `_cached_remote_source` ? double-checked cache hit, `require_free_bytes(..., stage="source-cache")` free-space guard, fetch to a unique `.tmp` then `os.replace` atomic publish, `finally` partial-cleanup;  
- :700-751` `get_source` ? local identity passthrough, remote via the cache, 507 preserved / 502-on-failure, unconditional annotation-proxy warm;  
- test `test_source_caches_remote_fetch_and_warms_proxy_from_cache` asserts a single fetch across two Range requests + proxy warmed from the cached copy.
```

Master's variant is marginally safer than this PR's (it adds ``resolve_under_root`` containment and never derives a path component from the untrusted remote object name ? it takes only the extension). The PR's diff base (``storage.acquire_local_input`/`input_is_local`` in ``get_source``) no longer exists on master, so it is **CONFLICTING** as pure same-region supersession.

Verified by independent review + adversarial re-check against ``master@d00b4db`` (both high-confidence). No residual value to carry forward.

45. user (2026-07-02T08:24:45.310Z)

File created successfully at: C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\close-418.md (file state is current in your context ? no need to Read it back)

46. assistant (2026-07-02T08:24:53.808Z)

Closing as **superseded by #422** (``4f148d1``, already on ``master``).

The material R1-19 fix ? ``--output-dir`` argparse ``default=None`` so ``config.json`` ``output.output_dir`` is honored on the init/DB path ? is already on ``master``:

```
- `backend/main.py:1990-1992` ? `default=None`, help text "overrides config.json output.output_dir";  
- `backend/main.py:2145-2150` ? explicit CLI `--output-dir` wins, otherwise `config.json`'s value is honored via `resolve_output_dir`, feeding `db_path` at :2153-2155`.
```

So the split-state / perceived-data-loss bug this PR targets is already fixed. #422 inlined the precedence instead of adding this PR's ``resolve_startup_output_dir`` helper; the PR is **CONFLICTING** because both edited the same argparse-default + init-assignment hunks for the same fix.

Residuals not on master are minor/optional: routing the diagnostic ``--trim`` debug path through the config value, a tidier ``OutputConfig`` comment, and a subprocess regression guard (``tests/test_startup_output_dir.py``). The test is a genuine coverage add but doesn't justify

rebasing the whole PR ? logged as an optional follow-up.

Verified by independent review + adversarial re-check against `master@d00b4db` (both high-confidence).

- `2026-06-25` ? **Accuracy fixes (docs-only).** (1) S8 DoD P5 said the module globals were "replaced with `app.state`"; corrected ? `create\_app()` *added* `app.state` and lifted `job\_worker` from quarantine, but `db\_instance`/`global\_config` remain as a transitional shim and `backend.main` is still mypy-quarantined (`backend/main.py:264`, `mypy.ini`). (2) `main.py`

```

size "~1300" ? "~1450" (now 1448 lines) in $3b/$6/$8.1.
- `2026-06-25` ? **P17 done (B2 finish).** The 4 callers that dropped provider error metrics
(`trajectory_hybrid.py`, `yolo_hybrid.py`, `gemini_refine.refine_window`,
`gemini_refine.full_video_rallies`) now check `metrics["error"]` and log loudly instead of
silently treating a provider failure as "0 rallies" ? matching the pattern the `gemini`
segmenter already uses. (`yolo_hybrid` was caught during PR #378 review ? it bound `metrics` but
never read it.) Suite 1484/1484 green; ruff + mypy clean. Follow-up: migrate the hybrids'
`process_video` return type from bare `List[Dict]` to the ABC `Result[...]` contract (motion.py
is already migrated; hybrids suppressed with `type: ignore[override]` for now).
- `2026-06-25` ? **P9 done (B1 finish).** Removed fabricated `random` data from the motion
segmenter ? server/receiver/shot_count/avg_speed_kmh ? `None`, serve/smash/foul/winner events
dropped entirely (motion was the only `add_event` caller). PR #385 review caught a real
regression: `run_process_and_stitch.py` crashed on `None >= min_shot_count` (the `.get(?, 0)`
default no longer applied) ? fixed with a None-guard matching the API path. Suite 1492/1492
green; ruff + mypy clean.
+- `2026-07-02` ? **P10 currency refresh (docs-only, audit-reconcile).** `backend/main.py` re-
measured: **2198 lines** (was 1448 on 2026-06-25 ? 10 PRs landed on it since, incl.
#400/#405?#409/#412/#413); sizes refreshed in $3b/$6/$8.1. Recorded on the P10 row that the
step-1 extraction PR **390** (`backend/orchestration.py`, cut 2026-06-25) is now **stale +
CONFLICTING** (verified via `gh pr view 390`: mergeable=CONFLICTING, DIRTY) and should be closed
+ re-cut fresh from `origin/master`. Header status/tracking-anchor also corrected (Phase-2
progress; the tracker is **$6**, not $7). No code change.
- `2026-06-26` ? **P12 CI fix (#386).** The D13/P12 PR failed the `full-suite` lane with
`ModuleNotFoundError: No module named 'trackers'`. Two root causes: (1) the two new tests hard-
imported the standalone `trackers` package, but it's a git-only dep (PyPI wheel is metadata-only
? roboflow/trackers#474) deliberately omitted from `pyproject.toml`, and the lane installs via
`pip install -e .[dev]`; (2) the git ref `@v2.5.0` was wrong ? roboflow/trackers uses bare
version tags (`2.5.0`), so pip failed with `pathspec 'v2.5.0' did not match`. Fixes: added a
`pip install trackers @ git+?@2.5.0` step to both `ci.yml` and `nightly.yml` full-suite lanes
(same out-of-band pattern as torch); fixed the tag in `requirements.txt`; and guarded the
package-importing test with `pytest.importorskip("trackers")` (matching the repo's `obsreport`
soft-dep convention). All 10 CI checks green.

## 55. assistant (2026-07-02T08:26:56.657Z)

I have #420's residual diff. But the numbers in it (e.g. main.py "2198 lines") are themselves already stale ? master moved further via #422?#428. I must re-derive every factual claim against **current** master, not lift #420's hunks blindly. Let me check the CI watch progress, measure main.py, set up an isolated worktree, and read the current master state of the residual files.

## 56. user (2026-07-02T08:27:01.970Z)

```
=== CI watch interim output ===
Waiting for #416 checks...
```

```
=== actual current main.py line count (master d00b4db) ===
2360
```

```
=== create isolated worktree from origin/master for the docs PR ===
Preparing worktree (new branch 'docs/audit-doc-reconcile')
branch 'docs/audit-doc-reconcile' set up to track 'origin/master'.
HEAD is now at d00b4db fix gcs storage lazy import typing (#428)
--- worktree branch ---
docs/audit-doc-reconcile
d00b4db fix gcs storage lazy import typing (#428)
```

#### 57. assistant (2026-07-02T08:27:09.348Z)

main.py is actually **\*\*2360\*\*** lines (not 2198). Worktree ready. Let me read the current master state of the residual files to ground each edit precisely.

#### 58. user (2026-07-02T08:27:10.640Z)

```
1 """Two-stage rally segmenter: torchvision person detection + ByteTrack tracking
2 (Stage 1, local) feeding an AI provider for semantic boundaries (Stage 2).
3
4 Stage-1 detection now lives in `backend/pipeline/detectors/person_detector.py`
5 (`PersonDetector`, a reusable rally-cue producer ? fusion P1) so the SAME person cue
6 can be consumed by the future fusion segmenter; this segmenter just orchestrates
7 chunking, the AI-provider handoff, and DB population around it. Behaviour is unchanged.
8
9 Stage 1 originally used the AGPL-licensed ultralytics YOLO. To keep the hosted
10 service free of copyleft obligations (see docs/MONETIZATION_AUDIT.md and ADR-005),
11 detection uses torchvision's permissively-licensed (BSD) detectors and the
12 association/tracking that YOLO.track() used to bundle in is provided by
13 supervision's MIT-licensed ByteTrack.
14
15 The registry key stays "yolo_hybrid" for back-compat with existing configs and the
16 DB `detector` tags, even though no YOLO is involved anymore.
17 """
18
19 import concurrent.futures
20 import logging
21 import os
22 import time
```

#### 59. assistant (2026-07-02T08:27:18.254Z)

Confirmed stale on master. Let me verify `person\_detector.make\_tracker` exists (so my corrected docstring is accurate), and read the other residual files.

#### 60. user (2026-07-02T08:27:21.007Z)

```
=== how does the code actually do tracking now? ===
1: """Person-detection rally cue ? torchvision detector + ByteTrack + motion windowing.
11: exception is the ByteTrack swap (D13/P12): ``make_tracker`` now builds a
12: ``trackers.ByteTrackTracker`` with its constructor params pinned to ``sv.ByteTrack``'s
15: - ``make_tracker`` ? a fresh ByteTrack tracker per chunk (standalone
 ``trackers`` pkg)
21: The model libs (torch, torchvision, supervision) are imported lazily inside the methods, and
 the
26: Licensing: torchvision detectors are BSD + COCO weights; ByteTrack is MIT (via the
27: standalone ``trackers`` package, Apache-2.0, since D13/P12; was ``supervision.ByteTrack``)
58: Owns the torchvision model + per-chunk ByteTrack tracker. Constructed with the run
105: def make_tracker(self, fps: float) -> Any:
106: """Create a fresh ByteTrack tracker for one chunk (track IDs are chunk-local).
108: D13/P12: migrated from ``supervision.ByteTrack`` (deprecated, removed in 0.30.0)
109: to the standalone ``trackers`` package (``ByteTrackTracker``). Imported lazily so
112: The constructor params are pinned to ``sv.ByteTrack``'s behaviour so the migration
124: from trackers import ByteTrackTracker
127: return ByteTrackTracker(
141: detection AND association: torchvision does the detection, supervision's
```

```

142: ByteTrack does the association.
144: import supervision as sv
165: # ByteTrack requires confidence to be populated (it filters on it internally).
175: # The standalone package uses -1 for unmatched detections (supervision used
None).

Both PRs: all 11 checks green on the fresh (current-master) base, `MERGEABLE CLEAN`. Taking them over ? documenting comment + squash-merge.

## 66. assistant (2026-07-02T08:28:20.782Z)

Taking this over and merging. ?

Verified against `master@d00b4db` that both R1-18 hazards are still present and **not** superseded by any of #422?#428 (none touched `backend/storage/gdrive\_api.py`):

- `gdrive\_api.py:144` still whole-file buffers the download (`get\_media().execute()` ? one `bytes`);
- `put()` still **deletes-before-create** (delete at :165 ? create at :166) ? the data-loss window.

The fix is correct and self-contained: chunked `MediaIoBaseDownload` ? `dst + ".part"` ? `os.replace` (no truncated `dst` survives a mid-download failure), and `files().update()` on re-put so the old object survives a failed upload while preserving the #338 idempotent-put

contract. 4 new offline tests.

Re-verification per the pre-LGTM gate: refreshed the branch onto current master and re-ran CI ? **\*\*all 11 checks green on the fresh base\*\*** (not the stale creation-time run), including the full offline suite, mypy, ruff, and cross-OS golden fixtures. The real `googleapiclient` path stays behind `# pragma: no cover` (library deliberately absent from CI) ? owner-verified on a real Drive round-trip by convention.

Squash-merging per the good-engineering-fix merge agreement. Completes health-plan row **\*\*P6\*\*** (Wave 2).

#### 67. user (2026-07-02T08:28:20.816Z)

File created successfully at: C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\merge-416.md (file state is current in your context ? no need to Read it back)

#### 68. assistant (2026-07-02T08:28:31.085Z)

Taking this over and merging. ?

Verified against `master@d00b4db` that R1-21 is still live and **\*\*not\*\*** superseded by #422?#428: `backend/compute/cloud\_run.py:173` still calls `poll\_until(...)` with no try/except, so a `PolicyTimeout` propagates uncaught ? the caller (`main.py:1162-1168`) marks the local job failed, but nothing cancels the still-running L4 execution, which keeps billing to `--task-timeout`, and a slow-but-healthy late result is wasted. Only #427 touched this file since the base, in an unrelated region (`\_read\_json` temp-dir handling below every hunk here); `git merge-tree` produced a clean combined tree with zero conflicts.

The fix is correct: on `PolicyTimeout`, one final best-effort done-marker check rescues a late-finishing worker; otherwise best-effort `cancel\_execution(execution)` then re-raise the timeout (chained). The real client validates a fully-qualified execution name **\*\*before\*\*** the lazy `google-cloud-run` import (so the guard is CI-exercisable and won't fire a bogus API call). No caller change; happy-path is byte-identical. 4 new offline tests.

Re-verification per the pre-LGTM gate: refreshed onto current master and re-ran CI ? **\*\*all 11 checks green on the fresh base\*\***. The real GCP `cancel\_execution` API call is not CI-testable (SDK not a test dep) ? owner-verified on the next real cloud run, same established stance as `run\_job`.

Squash-merging per the good-engineering-fix merge agreement. Completes health-plan row **\*\*P7\*\*** (Wave 2).

## 71. assistant (2026-07-02T08:29:03.630Z)

#416 and #417 merged ? master now at `e0937f3`. Only #420 remains open (besides the excluded #390). Now let me build the docs-reconciliation PR. First update the worktree to the new master head, then read the remaining doc sections I need to ground the edits.

## 72. user (2026-07-02T08:29:06.919Z)

```
=== update worktree branch to new master head e0937f3 (no local changes to lose) ===
HEAD is now at e0937f3 fix(compute): rescue-or-cancel on Cloud Run bucket-poll timeout (R1-21) (#417)
e0937f3 fix(compute): rescue-or-cancel on Cloud Run bucket-poll timeout (R1-21) (#417)
```

## 73. assistant (2026-07-02T08:29:12.246Z)

Worktree at `e0937f3`. Now let me read the remaining sections I need to ground the edits.

## 74. user (2026-07-02T08:29:14.145Z)

```
60 | **B5** | MEDIUM | `backend/config/models.py::IndexingConfig` |
`segmenter_must_be_registered` validator is a **no-op pass-through**. Typo'd segmenter passes
validation. | **1** |
61 | **B6** | LOW | `backend/pipeline/validators/resolution_fps.py` | Hard-fails if
`format_check` didn't run first ? ordering is an import-time side-effect. | 3 |
62 | **B7** | LOW | `backend/eval/calibrate_wasb.py::load_golden_gts` | Silently skips bad
rows (opposite of `annotations.load_annotations` which RAISES). | 3 |
63 | **B8** | LOW | `backend/eval/regression.py` | No baseline ? `regressed=False` (silent
pass). Library function diverges from `run_regression.py` exit 3. | 3 |
64
65 ### 3b. Technical Debt / Design Smells
66
67 | ID | Severity | Area | Issue | Phase |
68 |----|-----|-----|-----|-----|
69 | **D1** | HIGH | `backend/main.py` | **Massive god-module** (~1450 lines). CLI, API,
worker orchestration, upload, debug-clip, trim, reingest all in one file. | 2 |
70 | **D2** | HIGH | `backend/main.py` + `backend/api/job_worker.py` | **Optional module
globals** (`db_instance`, `global_config`). NPE-prone; mypy-quarantined. | **1** |
71 | **D3** | HIGH | `backend/config/models.py` | **Dual config access.** Typed Pydantic
model + legacy `.get()` dict shim. `extra='allow'` silently keeps typo'd keys. | **1** |
72 | **D4** | MEDIUM | `backend/config/loader.py` | Shallow top-level merge: a
`config.json` section REPLACES the defaults dict for that section ? new fields missed on
upgrade. | 2 |
73 | **D5** | MEDIUM | `backend/main.py` | `print()` used in production backend code (~20
calls in `--debug-clip`). Bypasses logging. | 3 |
```

=== 'now unblocked' P10 row + changelog tail ===

```

69:| **D1** | HIGH | `backend/main.py` | **Massive god-module** (~1450 lines). CLI, API, worker
orchestration, upload, debug-clip, trim, reingest all in one file. | 2 |
168:- **Does NOT split `main.py` (D1).** The god-module split is deferred ? D2 (app-factory) is
a necessary precursor.
198:| **P10** | **D1: Split `main.py` god-module** (~1450 lines ? smaller modules) | P7 | No | ?
| ? |
221:- [x] P5: `create_app()` injects shared state via `app.state` (handlers read
`request.app.state`); `backend.api.job_worker` removed from mypy quarantine. (The Optional
module globals `db_instance`/`global_config` are **retained as a transitional back-compat shim**
and `backend.main` stays mypy-quarantined ? full removal is follow-up, see D1/P10.)
247:| 5 | **D1 / P10** | Split `main.py` god-module | ~1450 lines. D2 (app-factory) was the
necessary precursor ? now done. Extract: CLI handlers ? `backend/cli/`, upload routes ? already
in `backend/api/uploads.py`, debug helpers ? `scripts/.` |
279:- `2026-06-25` ? **Accuracy fixes (docs-only).** (1) $8 DoD P5 said the module globals were
"replaced with `app.state`"; corrected ? `create_app()` *added* `app.state` and lifted
`job_worker` from quarantine, but `db_instance`/`global_config` remain as a transitional shim
and `backend.main` is still mypy-quarantined (`backend/main.py:264`, `mypy.ini`). (2) `main.py`
size "~1300" ? "~1450" (now 1448 lines) in $3b/$6/$8.1.
--- last 6 changelog lines ---
- `2026-06-24` ? **Round 4 (final).** P5/D2 app-factory (#370) + test fixes (#371). Status ?
PHASE 1 COMPLETE. Suite 1463/1463 green. $8.1 added with prioritized Phase 2 pick-up.
- `2026-06-25` ? **$8.1 reconciled with the $6 source-of-truth (docs-only).** Removed three
already-shipped items that $8.1 still listed as deferred future work ? D4/P13, O2/P14, Q7/P15
(all merged in #373/#374) ? and split the unfinished half of B2 out of the done P8 into a new
P17 (the provider return contract + the `trajectory_hybrid`/`gemini_refine` callers that
still drop `metrics["error"]`). Grounded against `loader.py::deep_merge`, `mypy.ini`,
`backend/results.py`, and `backend/providers/gemini.py` + its callers. No code change.
- `2026-06-25` ? **Accuracy fixes (docs-only).** (1) $8 DoD P5 said the module globals were
"replaced with `app.state`"; corrected ? `create_app()` *added* `app.state` and lifted
`job_worker` from quarantine, but `db_instance`/`global_config` remain as a transitional shim
and `backend.main` is still mypy-quarantined (`backend/main.py:264`, `mypy.ini`). (2) `main.py`
size "~1300" ? "~1450" (now 1448 lines) in $3b/$6/$8.1.
- `2026-06-25` ? **P17 done (B2 finish).** The 4 callers that dropped provider error metrics

```

```
(`trajectory_hybrid.py`, `yolo_hybrid.py`, `gemini_refine.refine_window`,
`gemini_refine.full_video_rallies`) now check `metrics["error"]` and log loudly instead of
silently treating a provider failure as "0 rallies" ? matching the pattern the `gemini`
segmenter already uses. (`yolo_hybrid` was caught during PR #378 review ? it bound `metrics` but
never read it.) Suite 1484/1484 green; ruff + mypy clean. Follow-up: migrate the hybrids'
`process_video` return type from bare `List[Dict]` to the ABC `Result[...]` contract (motion.py
is already migrated; hybrids suppressed with `type: ignore[override]` for now).
- `2026-06-25` ? **P9 done (B1 finish).** Removed fabricated `random` data from the motion
segmenter ? server/receiver/shot_count/avg_speed_kmh ? `None`, serve/smash/foul/winner events
dropped entirely (motion was the only `add_event` caller). PR #385 review caught a real
regression: `run_process_and_stitch.py` crashed on `None >= min_shot_count` (the `.get(?, 0)`
default no longer applied) ? fixed with a None-guard matching the API path. Suite 1492/1492
green; ruff + mypy clean.
- `2026-06-26` ? **P12 CI fix (#386).** The D13/P12 PR failed the `full-suite` lane with
`ModuleNotFoundError: No module named 'trackers'`. Two root causes: (1) the two new tests hard-
imported the standalone `trackers` package, but it's a git-only dep (PyPI wheel is metadata-only
? roboflow/trackers#474) deliberately omitted from `pyproject.toml`, and the lane installs via
`pip install -e .[dev]`; (2) the git ref `@v2.5.0` was wrong ? roboflow/trackers uses bare
version tags (`2.5.0`), so pip failed with `pathspec 'v2.5.0' did not match`. Fixes: added a
`pip install trackers @ git+?@2.5.0` step to both `ci.yml` and `nightly.yml` full-suite lanes
(same out-of-band pattern as torch); fixed the tag in `requirements.txt`; and guarded the
package-importing test with `pytest.importorskip("trackers")` (matching the repo's `obsreport`
soft-dep convention). All 10 CI checks green.
```

## 77. assistant (2026-07-02T08:29:53.125Z)

The tracker is confirmed \*\*S6\*\* (line 174), so line 10's "S7 ... source of truth" is genuinely wrong. Let me read the rest of the Phase-2 tracker + DATA\_IN\_GCS S5?8 + README bullets to ground the remaining edits.

## 78. user (2026-07-02T08:29:56.487Z)

```
202 | **P14** | **02: Single-executor risk** ? documented with mitigations in job_worker.py
| P7 | No | ? | [#374](https://github.com/Khelsutra/badminton-highlight-indexer/pull/374) |
203 | **P15** | **Q7: Type-clean `motion.py`** ? ratchet exercise | P7 | No | ? |
[#373](https://github.com/Khelsutra/badminton-highlight-indexer/pull/373) |
204 | **P17** | **B2 (cont.): finish the `Success`/`Failure` return contract** ? the 4
callers that dropped provider error metrics (`trajectory_hybrid`, `yolo_hybrid`,
`gemini_refine.refine_window`, `gemini_refine.full_video_rallies`) now surface
`metrics["error"]` loudly instead of silently treating a failure as "0 rallies". (Full
`Success`/`Failure` return-type migration of the hybrids is follow-up.) | P8 | No | ? |
[#378](https://github.com/Khelsutra/badminton-highlight-indexer/pull/378) |
205 | **P16+** | Phase 3 items (B4/B7/B8/D5/D6/D8-D10/D14/O3/O4) | P15 | No | ? | ? |

208
209 ## 7. Open questions
210
211 1. **Q: Should D1 (split `main.py`) be Phase 1 or Phase 2?` ? Leaning Phase 2: D2 (app-
factory) is a natural precursor, and D1 is lower risk after the globals are gone. Owner to
confirm.
```

## 79. user (2026-07-02T08:29:57.586Z)

```
100 --video-uri gcs://khelsutra-rally-corpus/videos/<clip>.mp4 \
101 --out-uri gcs://khelsutra-rally-corpus --segmenter wasb_hybrid --config config.json
102
103 # TRAIN from the bucket (reads labels/ [+ videos/], extracts trajectories, builds
manifest on-box,
104 # runs training.gen0.harness, pushes weights/<version>):
105 RALLY_DETECTOR_IMPL=native python -m backend.worker train \
106 --corpus-uri gcs://khelsutra-rally-corpus --out-uri gcs://khelsutra-rally-corpus \
107 --version <v> --trajectory-source detector --segmenter wasb_hybrid --config
config.json
```

```

108 ``
109
110 A bare/relative path resolves under a configured `input_root`/`input_backend`
111 (`backend/storage/ref.py::resolve_input_uri`), so workflows can be written bucket-
112 relative.
113 ---
114
115 ## 5. The gap ? what's still local-only (why the box is still a blocker)
116
117 All of this is tiny except the originals ? the metadata that blocks cloud eval is <
118 25 MB total:
119
120 | Data | Where it is now | Size | In bucket? | Needed for |
121 |---|---|---|---|---|
122 | 20 WASB trajectory CSVs | `C:\?\Annotation Setup\Collect\Trajectories\` | 17.5 MB
123 | ? none | eval/litmus (cached). *(No `cached` train source exists ? train synths or detector-
124 extracts.)* |
125 | golden manifest | `output/human_lovo_manifest.json` (C:-absolute paths) | 4.5 KB | ? |
126 eval corpus definition |
127 | original-6 labels | `F:\[Khelsutra]\Training\Golden Labelled\*.rallies.csv` | ~12 KB
128 | ? | train + eval |
129 | 7 new-clip labels | repo `output/*.rallies.csv` (gitignored) **** F: archive (backed
130 up 2026-06-22) | ~12 KB | ? partial/inconsistent | train + eval |
131 | source videos / proxies | F: archive + Google Drive golden folder | 100s of GB | ?
132 3 only | infer + train (real WASB extraction) |
133
134 > The corpus metadata (trajectories + labels + manifest, ~25 MB) is what actually
135 blocks GPU-free
136 > cloud eval and the served Gate-A litmus ? and it's trivially small to migrate. The
137 videos are the
138 > only large migration, and they already exist on Google Drive (the golden-corpus
139 folder), so they
140 > can go Drive ? bucket from a cloud box, keeping the local machine out of the path
141 entirely.
142
143 ---
144
145 ## 6. Migration plan (close the gap)
146
147 Phase 1 ? corpus metadata (?25 MB, do first, removes the eval blocker). Stage all
148 trajectories,
149 all labels, and a bucket-relative eval manifest into `gs://khelsutra-rally-corpus`.
150 Pending the §7
151 naming decision. Sketch:
152
153 ```bash
154 # trajectories (decision-free; absent today)
155 gcloud storage cp "C:\?\Collect\Trajectories*.csv" gs://khelsutra-rally-
156 corpus/trajectories/
157 # labels (after the §7.1 naming decision) -> labels/<canonical-name>.rallies.csv
158 # eval manifest with gs:// (or bucket-relative) paths -> a stable manifest object (§7.3)
159 ```
160
161 Phase 2 ? videos ? `videos/<name>.mp4` (bucket name = the eval `name`, consistent
162 with
163 `trajectories/` + `labels/`). Sources (resolved 2026-06-22 ? see
164 `scratch/copy_videos_to_gcs.ps1`):
165
166 | Source | Clips | Size |
167 |---|---|---|
168 | Drive golden folder `?/Golden Label Videos Request - June 15/[Done] Video N/`
169 (proxies) | `mahadevpura_1/2`, `GX010128`, `GX020094`, `GX030094`, `Badminton_BXH_2`,
170 `Boxhill_Doubles` (7) | ~13.5 GB |
171 | F: archive (full MP4s ? proxy-first before upload) | `GX010137`, `GX010141`, +

```

```

original-6 (`adarsh_avi_singles`, `kushagra_singles`, `largetest_doubles`, `gbaaddy`,
`testlarge_short`, `mahadevpura_singles`) (8) | ~50 GB |
154
155 **Two ways to run it:**
156 - **Decoupled (preferred ? no local box):** `rclone` on a cloud VM with a Google-Drive
remote ?
157 `rclone copy gdrive:"<?/[Done] Video N>/<proxy>.mp4" :gcs:khelsutra-rally-
corpus/videos/<name>.mp4`
158 (one-time owner step: `rclone config` ? `gdrive` remote OAuth). Or `gdown <file-id>`
on the box for
159 the shared folder. This is the path that actually removes the local box.
160 - **Interim (today, owner box ? streams Drive/F: ? local ? GCS):** `pwsh
scratch/copy_videos_to_gcs.ps1
161 -Execute` (dry-run without `-Execute`; `-Only <name>` for one; skip-existing). Uses
local bandwidth.
162
163 **Priority:** the 7 Drive **proxies** first (already 1080p, sufficient for detection).
The 8 large F:
164 full MP4s should be **proxied to 1080p first** (cheaper storage + faster cloud decode)
before upload.
165 ? Two pre-existing non-canonical video objects (`videos/GX030094_proxy.mp4`,
`videos/mahadevpura-1.MP4`)
166 are superseded once `videos/GX030094.mp4` / `videos/mahadevpura_1.mp4` land ? verify-
dupe-then-delete
167 (same as the label cleanup). Track per-clip in S8.
168
169 **Phase 3 ? make eval/litmus read GCS (real code, NOT a config flip).** The eval drivers
170 (`served_gate_a.evaluate_video`, `calibrate_wasb.load_golden_gts`,
`TrackNetRunner.parse_trajectory_csv`)
171 open `spec["trajectory"]`/`spec["labels"]` with plain `open()` and gate on
`os.path.isfile()` ? they
172 have **no storage-layer fetch**, so a `gs://` manifest cannot be consumed today. Phase-3
must thread
173 `storage.fetch`/`resolve_input_uri` through those paths first. Then: re-probe
`fps`/`frame_width` from
174 the bucket videos (don't trust the copied values ? a wrong fps silently mis-aligns every
label), and
175 **re-measure the served Gate-A litmus on the GCS 15-clip set as a [[launch-report-
convention]] event**
176 (dual-set RAW+golden no-regression, not a silent eval-set swap ? see PR #236).
177
178 ---
179
180 ## 7. Decisions
181
182 1. **`labels/` naming ? LOCKED (owner, 2026-06-22):** `labels/<YYYY-MM-
DD>_<name>.rallies.csv`, where
183 `<name>` is the eval/manifest clip name and `<YYYY-MM-DD>` is the label's **authoring
date** =
184 the *earliest* mtime across all known copies (C: working copy + F: archive ? robust
to copy-resets;
185 a restored C: copy shows today, the F: archive keeps the real date). Fixes the
`_proxy` inconsistency
186 and disambiguates recycled GoPro names by date. *(Future, when videos are in the
bucket: optionally
187 add a `video_id`/MD5 sidecar for the strongest keying ? deferred, needs hashing each
video.)*
188 2. **Cache `trajectories/` ? YES, done 2026-06-22.** `trajectories/<name>.csv` cached so
cloud/CI eval +
189 the served Gate-A litmus run **GPU-free** (training can still regenerate via
`--trajectory-source detector`).
190 3. **Eval manifest in GCS ? done 2026-06-22.** `gs://khelsutra-rally-
corpus/manifests/golden.json`
191 (15 clips, `gs://` trajectory + label paths). The **local** litmus keeps its local-
path manifest;

```

```

192 flipping the litmus to read the GCS manifest is Phase 3.
193 4. **Originals migration scope ? OPEN** ? proxies-only vs full 4K, and how much of the
15-clip golden
194 set vs the wider archive. Source = Google Drive ? bucket from a cloud box (not the
local box).
195
196 > Phase-1 was run via a dry-run planner (resolve every clip's trajectory + label, stamp
the label's
197 > authoring date, build the `gs://` manifest) ? `gcloud storage cp` (planner kept in
gitignored
198 > `scratch/`; promote it to `scripts/` if corpus-sync recurs).
199 > ? **Cleanup DONE 2026-06-22:** the 7 pre-existing inconsistent label objects
(`*_proxy.rallies.csv`,
200 > bare `GX010128`/`mahadevpura-1`) were confirmed **byte-identical (MD5)** to the new
canonical names
201 > (content also on C:/F:) and **deleted** ? `labels/` now holds exactly the 15 canonical
objects.
202
203 > ? **gcloud gotcha (Phase-2):** `gcloud storage cp` treats `[...]` as a glob, so source
paths under
204 > `[Done] Video N/` (Drive) or `[Khelsutra] ?` (F:) fail with "matched no objects." The
owner-box
205 > script (`scratch/copy_videos_to_gcs.ps1`) stages such paths through a bracket-free
temp file; the
206 > `rclone` cloud path has no such issue.
207
208 ---
209
210 ## 7b. Known blockers ? must-fix before the DoD (2026-06-22 adversarial review)
211
212 1. **? RESOLVED 2026-06-22 ([#319](https://github.com/Khelsutra/badminton-highlight-
indexer/pull/319))
213 ? dated labels broke `worker train --trajectory-source detector`. **History:**
`cmd_train` derived the
214 join key as `fname.replace(".rallies.csv","")` ? `2026-06-22_GX020094`, then looked
up

```

## 80. assistant (2026-07-02T08:30:26.342Z)

Now I understand DATA\_IN\_GCS: S5's gap table (metadata ?) directly contradicts S7 decisions #2/#3 which state trajectories + manifest + labels **\*\*landed in-bucket 2026-06-22 (LOCKED)\*\***. I'll reconcile S5 to S7's authoritative facts ? conservatively, without importing #420's unverifiable per-clip specifics. Let me read the README bullets to see what's still stale there.

## 81. user (2026-07-02T08:30:28.694Z)

```

36
37 ## Historical documents
38 Completed plans, old research, ADRs, and checkpoints live in [`archives/`](archives/).
39
40 - CODE_AUDIT_AND_TEST_HARDENING.md ? **COMPLETED**
(2026-06-14; T1?T5 + full loop + verification per #162). Living record of the June 2026 plumbing
/ contract / architectural audit, 626-test infrastructure, positive test plans for the 5
identified issues, multi-layer regression protocol (including ablation/experiment layer), and
pre/post-change verification checklist. See `docs/archives/CODE_AUDIT_AND_TEST_HARDENING-
COMPLETED-2026-06-14.md` and `docs/archives/checkpoints/2026-06-14-hardening-loop-complete.md`
for the final archived state. (Top-level is now pointer stub per review; full content in
archives/.)
41 - CODE_CLEANUP_AUDIT_2026-06-24.md ? **? Tracked
project (Phase 1 COMPLETE, Phase 2 nearly done):** the next-wave cleanup project ? 33 audit
findings across bugs, tech debt, operational risks, and quick wins. Phase 1 = pure refactorings
(typed-config migration, app-factory, segmenter validator fix); Phase 2+ = logic fixes. S7
progress tracker is the source of truth; sibling of the completed hardening sweep above.
42 - KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md
? **? Tracked project (IN PROGRESS, 2026-07-02):** live execution board for the five-repo

```

`khelsutra-guru` audit cleanup. Extends the 2026-07-02 audit report, records post-sync completed items and pushback, then sequences the work into small PR waves with coverage and UI-screencast requirements. §7 progress tracker is the source of truth.

```
43 - DECISION_SNAPSHOT_REGRESSION.md ? **? Tracked
project (decisions D1?D11 LOCKED 2026-06-25, #383; implementation P1?P7 pending):** a
deterministic **quality-neutral proof** ? freeze + compare the pipeline's **decision output**
(rally segments + stitch/concat plan) off a cached trajectory, GPU-free, in CI. The behavioral
proof that lets a *genuine* (non-AST-identical) refactor be confidently called quality-neutral.
Never hashes the encoded reel (non-deterministic). Extends the existing characterization
snapshot (`test_golden_fixtures.py`) from segmentation to the stitch plan; peer of the M4
quality-floor + GPU `nightly_reelcount.py`. §7 tracker is the source of truth.
44
45 - **Field-ops / customer-feedback** (recruiting flyer · field-visit playbook · PMF) ?
archives/field-pmf/ (archived 2026-06-21; PMF validation still an
active *business* thread ? see `NEXT_STEPS.md`).
46 - **Roora annotation-vendor** engagement (labeling brief · vendor bake-off) ?
archives/roora-vendor/ (archived 2026-06-21).
47 - Superseded: per-video output layout ? [archives/PER_VIDEO_OUTPUT_LAYOUT-
SUPERSEDED-2026-06-21.md](archives/PER_VIDEO_OUTPUT_LAYOUT-SUPERSEDED-2026-06-21.md) (?
`PER_VIDEO_WORKSPACE.md`).
```

## 82. assistant (2026-07-02T08:31:01.507Z)

README line 41 was reconciled by #421/#423 but still has two nits: "§7 ... source of truth" (should be §6, verified) and "33 audit findings". Let me verify the true finding count before asserting 35, then I'll make all grounded edits.

## 83. user (2026-07-02T08:31:07.168Z)

=== how many findings does CODE\_CLEANUP\_AUDIT actually claim? ===

```
8:> **Status:** `PHASE 1 COMPLETE` ? 14 items shipped + D2 app-factory + test fixes · **Owner:**
Avi · **Created:** 2026-06-24 · **Last updated:** 2026-06-25 (DoD/line-count accuracy fixes ?
see Changelog)
```

19:A deep, whole-repo audit on 2026-06-24 surfaced \*\*35 items\*\* (33 from fresh review + 2 absorbed from `docs/BACKLOG.md`) across bugs, technical debt, operational risks, and quick wins. This doc organizes them into a phased cleanup project: \*\*Phase 1 = pure refactorings\*\* (no logic change, all tests must stay green, coverage must not drop), \*\*Phase 2+ = logic fixes + hardening\*\*.

The first approved targets are \*\*B2, D3, D2, B5\*\* ? the `Success`/`Failure` contract for Gemini, typed-config migration completion, app-factory refactor, and the no-op segmenter validator fix.

170:- \*\*A green suite after Phase 1 does NOT mean the code is "clean."\*\* It means the structural debt targeted by D2/D3/B5 is resolved. The remaining 28 items still need attention.

205:| \*\*P16+\*\* | Phase 3 items (B4/B7/B8/D5/D6/D8-D10/D14/O3/O4) | P15 | No | ? | ? |

253:| 6+ | \*\*P16+\*\* | B4, B7, B8, D5, D6, D8?D10, D14, O3, O4 ? Phase 3 items |

261:- \*\*Audit source:\*\* 33 findings from a deep whole-repo read on 2026-06-24, plus 2 absorbed from `docs/BACKLOG.md` (D13, D14) for a total of 35. Two additional BACKLOG items (D2, O1) were already independently found and are cross-referenced in §3e.

273:- `2026-06-24` ? Absorbed 2 findings from `docs/BACKLOG.md` (D13, D14). Cross-referenced D2 and O1 in §3e.

275:- `2026-06-24` ? \*\*Round 2.\*\* Quick wins (#358 Q4, #359 Q5, #360 Q6 isort, #361 Q8) ? Tier 1 (#362 Q2+D11) ? Tier 2 (#363 B6) ? Tier 3+4 (#364 D12+B3+O5). 11 items shipped total.

276:- `2026-06-24` ? \*\*Round 3.\*\* P2/D3-b segmenters (#366) + P3/D3-c extra='forbid' (#367). 18 items shipped.

--- TL;DR / §0 intro line ---

## 0. TL;DR

A deep, whole-repo audit on 2026-06-24 surfaced \*\*35 items\*\* (33 from fresh review + 2 absorbed from `docs/BACKLOG.md`) across bugs, technical debt, operational risks, and quick wins. This doc organizes them into a phased cleanup project: \*\*Phase 1 = pure refactorings\*\* (no logic change, all tests must stay green, coverage must not drop), \*\*Phase 2+ = logic fixes + hardening\*\*.

The first approved targets are \*\*B2, D3, D2, B5\*\* ? the `Success`/`Failure` contract for Gemini, typed-config migration completion, app-factory refactor, and the no-op segmenter validator fix.

=== #390 current state (confirm stale/conflicting) ===  
OPEN UNKNOWN UNKNOWN updated=2026-06-26T14:37:18Z

#### 84. assistant (2026-07-02T08:32:29.011Z)

Confirmed: audit total is **\*\*35\*\*** (line 19: "33 from fresh review + 2 absorbed"), so README's "33" is a genuine undercount. #390 is OPEN and long-stale (last updated 2026-06-26, before ~14 merged commits; main.py grew 1448?2360). I have everything grounded now. Let me make the edits ? starting with the code docstring (R1-14) and the README nits.

#### 85. user (2026-07-02T08:32:33.325Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\backend\pipeline\segmenters\yolo\_hybrid.py has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 86. user (2026-07-02T08:32:36.175Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\README.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 87. assistant (2026-07-02T08:33:12.863Z)

Docstring + README nits done. Now the CODE\_CLEANUP\_AUDIT reconciliations (header status, \$6 anchor, main.py line counts in 3 places, #390-stale note, changelog).

#### 88. user (2026-07-02T08:33:17.609Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\CODE\_CLEANUP\_AUDIT\_2026-06-24.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 89. user (2026-07-02T08:33:24.043Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\CODE\_CLEANUP\_AUDIT\_2026-06-24.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 90. user (2026-07-02T08:33:27.293Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\CODE\_CLEANUP\_AUDIT\_2026-06-24.md has been updated successfully. (file state is current in your context ? no need to Read it back)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\CODE\_CLEANUP\_AUDIT\_2026-06-24.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 92. user (2026-07-02T08:33:44.221Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\CODE\_CLEANUP\_AUDIT\_2026-06-24.md has been updated successfully. (file state is current in your context ? no need to Read it back)

**93. assistant (2026-07-02T08:34:12.374Z)**

Now the DATA\_IN\_GCS \$5 reconciliation ? flipping the metadata rows to ? (grounded in \$7's LOCKED decisions #2/#3 and the \$7 cleanup note), and fixing the self-contradiction.

**94. user (2026-07-02T08:34:24.784Z)**

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\DATA\_IN\_GCS.md has been updated successfully. (file state is current in your context ? no need to Read it back)

**95. assistant (2026-07-02T08:34:32.748Z)**

Let me update the "Last inventoried" note and the \$6 Phase-1 header (still says "Pending the \$7 naming decision" / "do first" despite \$7 marking it done). Let me read the exact current text of both.

**96. user (2026-07-02T08:34:33.781Z)**

```
7 > the storage layer). The deploy layer's bucket names now live in one place
(`deploy/gcp/buckets.env`).
8
9 **Status:** LIVE / in-progress (migration not complete). **Owner-gated** decisions in
$7.
10 **Last inventoried:** 2026-06-22 against `gs://khehsutra-rally-corpus`.
11 **Goal (owner, 2026-06-22):** run **all** training + inference from the cloud with **all
data in GCS**,
```

**97. user (2026-07-02T08:34:39.179Z)**

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\DATA\_IN\_GCS.md has been updated successfully. (file state is current in your context ? no need to Read it back)

**98. user (2026-07-02T08:34:42.380Z)**

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\DATA\_IN\_GCS.md has been updated successfully. (file state is current in your context ? no need to Read it back)

**99. assistant (2026-07-02T08:35:39.497Z)**

Now the health-remediation plan itself: mark P6/P7 Done, refresh the R1-01 line count, add a PR-dispositions subsection, and update the status line + changelog.

**100. user (2026-07-02T08:35:40.712Z)**

<tool\_use\_error>File has not been read yet. Read it first before writing to it.</tool\_use\_error>

**101. user (2026-07-02T08:35:44.273Z)**

<tool\_use\_error>File has not been read yet. Read it first before writing to it.</tool\_use\_error>

**102. assistant (2026-07-02T08:35:55.539Z)**

The health-plan edits target the worktree copy, which I haven't Read at that path yet. Let me read it (same content, at the worktree path) to unlock edits.

**103. user (2026-07-02T08:35:57.180Z)**

```
1 # khehsutra-guru health remediation plan
2
3 > **Status:** `IN PROGRESS` ? audit complete; docs-only tracking bootstrap . **Owner:**
```

```

Avi . **Created:** `2026-07-02` . **Last updated:** `2026-07-02`
4 > **Lifecycle:** `DRAFT -> IN PROGRESS -> DONE -> archived` (move to `docs/archives/`
when DONE)
5 > **Tracking anchors:** Section 7 progress tracker is the source of truth; indexed in
`docs/README.md`; lifecycle row in `docs/DOC_STATUS.md`; live checkpoint in memory `current-
state`.
6 > **Relation to existing docs:** extends `docs/AUDIT_REPORT_khelsutra-
guru_2026-07-02.md`; peer-of `docs/CODE_CLEANUP_AUDIT_2026-06-24.md`; coordinates sibling repos
under `C:\Users\avidu\Projects\khelsutra-guru`.
7 > **Honesty note:** statuses below reflect code/docs checked after pulling all five
repos to origin head on 2026-07-02. The audit report remains a snapshot against earlier SHAs;
this plan is the live tracker.
8
9 ---

```

#### 104. assistant (2026-07-02T08:36:04.136Z)

Content confirmed identical. Now the health-plan edits.

#### 105. user (2026-07-02T08:36:07.311Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 106. user (2026-07-02T08:36:14.259Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 107. user (2026-07-02T08:36:18.850Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 108. assistant (2026-07-02T08:36:23.382Z)

Now the PR-dispositions subsection and the changelog entry.

#### 109. user (2026-07-02T08:36:35.024Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN.md has been updated successfully. ```
1 """Leak-scan guard ? refuse to commit obvious PII / attribution leaks into the code
surface.
2
3 A *structural* CI guard (deliberately NOT a name detector): it scans the TRACKED text
files under
4 the code/data roots for
5
6 (a) a 32-hex MD5 token ? the ``video_id`` shape
(``backend/utils/hashing.py::compute_video_id``);
7 16-hex ``fx_`` fixture slugs and 12-hex ``gt_hash`` values do NOT match, by
design.
8 (b) a personal absolute user path ? ``C:\\Users\\<name>``, ``/home/<name>/``,
``/Users/<name>/`` ?
9 where ``<name>`` is a real username (documented placeholders like
``<name>``/``<user>`` are OK).
10
11 Optionally, given a PRIVATE (gitignored) name-list via ``--names`` (default
``<root>/leakscan_private``
12 if present), it ALSO flags those tokens ? so the owner can scan for real player/venue
names locally
13 while CI runs only the name-free structural guard (you can't commit a name-list to scan
for).
14
15 A line carrying ``# leakscan-allow`` is skipped (escape hatch for a legitimate token,
e.g. an MD5
16 test-vector). Run ``python -m tools.leak_scan`` (exit 1 on any finding). SCOPE = the
shipped-code
17 surface (``backend/ training/ scripts/ tools/ eval_baselines/``); ``tests/`` (legit
example
18 fixtures), ``docs/``, and gitignored ``scratch/``/``output/`` are NOT scanned (scan
those locally
19 with ``--names`` against a private list if desired).

#### 118. assistant (2026-07-02T08:38:24.321Z)

The leak-scan is a **\*\*PII guard\*\*** (32-hex MD5 tokens + personal user paths under `backend/training/scripts/tools/eval\_baselines`) ? it does not scan `docs/` and does not touch AI attribution. My only scanned-root change is the yolo\_hybrid docstring, which has no MD5/personal-path. Safe. Now let me commit with branch-safety checks (re-verify base, stage explicit paths).

docs: reconcile audit docs to shipped state + record PR dispositions

Carries the genuinely-unapplied residuals from #420 (the rest of #420 was superseded by #421/#423) and reconciles the audit tracking docs after taking over #416/#417 and closing the superseded early-batch PRs (#414/#415/#418/#419).

- yolo\_hybrid.py: fix stale ByteTrack-licensing docstring ? tracking is the standalone Apache-2.0 `trackers` package (D13/P12, #386), not "supervision's MIT ByteTrack" (matches person\_detector.make\_tracker; R1-14).
- DATA\_IN\_GCS.md: reconcile the §5 gap table ? Phase-1 metadata is in-bucket per

\$7 decisions #2/#3; it had shown the pre-Phase-1 gaps and contradicted \$6/\$7/\$7b.

- CODE\_CLEANUP\_AUDIT: fix the tracker anchor (\$7 -> \$6), refresh main.py size (1448 -> 2360) in D1/P10/\$8.1, and note #390 (step-1 split) is stale -> re-cut from origin/master.
- README.md: CODE\_CLEANUP bullet -> 35 findings + \$6 anchor.
- KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN: mark P6 (#416) / P7 (#417) Done, refresh the R1-01 line count, add the audit-batch PR-dispositions table.

Docs-only except one behaviour-neutral docstring. Local verification: ruff clean, `python -m tools.check\_md\_links` clean, `git diff --check` clean.

Pushed cleanly (only my commit above origin/master). Now let me open the PR.

## 125. assistant (2026-07-02T08:39:16.122Z)

### What / why

Reconciles the audit tracking docs to shipped reality after this session's PR triage, and carries forward the genuinely-unapplied residuals from **#420** (which was closed ? 4 of its 7 files were already superseded by #421/#423). Verified against `master` before writing; **no behaviour change** (the only non-doc edit is a docstring).

### Carried from #420 (still-unapplied on master)

- **backend/pipeline/segmenters/yolo\_hybrid.py** ? the module docstring still said tracking is "supervision's MIT-licensed ByteTrack". The code migrated to the standalone **Apache-2.0 trackers** package in D13/P12 (#386) ? see `person_detector.make_tracker` (`supervision.ByteTrack` was removed upstream in 0.30.0). Fixed the licensing accuracy (audit R1-14).
- **docs/DATA\_IN\_GCS.md** ? \$5's gap table still showed corpus metadata (trajectories/manifest/labels) as ? **not in bucket**, contradicting \$6/\$7/\$7b, where \$7 decisions #2/#3 record it **landed in the bucket 2026-06-22 (LOCKED)**. Reconciled \$5 (and the \$6 Phase-1 header) to the post-Phase-1 state; the remaining gaps are videos (Phase 2) + Phase-3 eval-on-GCS plumbing.
- **docs/CODE\_CLEANUP\_AUDIT\_2026-06-24.md** ? fixed the tracker anchor (the tracker is **\$6**, the header said \$7), refreshed the `main.py` size (**1448 ? 2360**) in the D1 row / P10 row / \$8.1, and recorded that step-1 split PR **#390** is stale (predates the merged commits since

2026-06-26) ? re-cut from `origin/master`.  
- `docs/README.md` ? CODE\_CLEANUP bullet: `**35**` findings (was 33; the doc itself says 35 = 33 + 2 absorbed) and the §6 anchor.

### Audit-project tracker

- `docs/KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md` ? marked `**P6 = #416**` and `**P7 = #417**`  
Done (both merged this session), refreshed the R1-01 line count (~1965 ? 2360), and added the `**audit-batch PR-dispositions table**` so the record is honest about what was taken over vs closed-superseded.

### PR triage summary (this session)

PR	Finding	Fate
#416	R1-18 GDrive stream/safe-put	<code>**Merged**</code> (P6) ? not superseded
#417	R1-21 Cloud Run poll-timeout salvage	<code>**Merged**</code> (P7) ? not superseded
#414	R2-5 CLAUDE.md truth-sync	Closed ? superseded by #421
#415	R1-20 upload_dir app-home	Closed ? superseded by #422
#418	R1-03 /api/source cache	Closed ? superseded by #425
#419	R1-19 --output-dir clobber	Closed ? superseded by #422
#420	R1-13/14 docs reconcile	Closed ? 4/7 superseded; 3 residuals carried <code>**here**</code>

(#390 was out of scope and left open ? tracked as CODE\_CLEANUP\_AUDIT P10.)

### Verification

- ``python -m ruff check backend/pipeline/segmenters/yolo_hybrid.py`` ? clean.
- ``python -m tools.check_md_links`` ? clean (no broken internal links in live docs).
- ``git diff --check`` ? clean (no whitespace/EOL noise).
- Leak-scan is unaffected: the only scanned-root change is the docstring (no MD5 / personal path).
- Full offline suite / mypy / cross-OS golden fixtures: rely on the CI rollup below (docs + a behaviour-neutral docstring).

### 127. user (2026-07-02T08:39:25.457Z)

<https://github.com/Khelsutra/badminton-highlight-indexer/pull/429>

### 128. assistant (2026-07-02T08:39:40.622Z)

PR #429 opened. Now close #420 (referencing #429 for the carried residuals) and start watching #429's CI.

### 129. assistant (2026-07-02T08:39:46.662Z)

Closing. After a per-PR review (independent analysis + adversarial verification against `master`, both high-confidence), this PR splits cleanly:

`**Superseded (4 of 7 files ? already on master):**` the ``docs/DOC_STATUS.md``, ``docs/README.md`` (project blurbs), ``docs/NEXT_STEPS.md``, and ``docs/BACKLOG.md`` reconciliations were landed by `**#421**` (``d80aa02``) and `**#423**` (``e517475``), which addressed the same R1-13/R1-14 findings. Those hunks now CONFLICT precisely because master already performed the same edits (e.g. the DOC\_STATUS DECISION\_SNAPSHOT row this PR calls "missing" already exists; NEXT\_STEPS/BACKLOG already reconciled).

`**Genuinely still-unapplied (3 files) ? carried forward in #429:**`

- ``backend/pipeline/segmenters/yolo_hybrid.py`` ? the stale ByteTrack-licensing docstring (R1-14);

- `docs/DATA\_IN\_GCS.md` ? the \$5 gap-table self-contradiction (metadata is in-bucket per \$7);
- `docs/CODE\_CLEANUP\_AUDIT\_2026-06-24.md` ? the \$6 tracker anchor + P10 currency;
- plus the `docs/README.md` `33 ? 35` findings + \$6-anchor nit.

#429 re-derives each residual against **current** master ? notably this PR's `main.py` figure (2198) was itself stale and was re-measured to **2360** ? and drops the 4 superseded files. Superseded by #421/#423 for the rest; the residuals now live in #429.

File created successfully at: C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\close-420.md (file state is current in your context ? no need to Read it back)

### 131. user (2026-07-02T08:39:56.267Z)

=== close #420 ===

? Closed pull request Khelsutra/badminton-highlight-indexer#420 (docs: reconcile stale trackers/blurbs with shipped state (audit R1-13/R1-14/R1-01-doc/DATA\_IN\_GCS))

=== remaining open PRs (should be #429 + excluded #390) ===

#429 docs: reconcile audit docs to shipped state + record PR dispositions

#390 refactor(D1/P10): extract orchestration.py from main.py (god-module split, step 1)

### 132. assistant (2026-07-02T08:40:02.449Z)

#420 closed. Board is now clean: only #429 (my reconcile PR) and the excluded #390 remain. Let me watch #429's CI and merge on green.

### 133. user (2026-07-02T08:40:04.515Z)

Command running in background with ID: bny9z09pe. Output is being written to:

C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\tasks\bny9z09pe.output. You will be notified when it completes. To check interim output, use Read on that file path.

### 134. assistant (2026-07-02T08:40:24.556Z)

All 7 in-scope PRs are now dispositioned. Here's where things stand:

**Closed as superseded (with cited comments):**

- [#414](https://github.com/Khelsutra/badminton-highlight-indexer/pull/414) ? superseded by #421 (CLAUDE.md already truth-synced)
- [#415](https://github.com/Khelsutra/badminton-highlight-indexer/pull/415) ? superseded by #422 (`upload\_dir` already app-home-rooted)
- [#418](https://github.com/Khelsutra/badminton-highlight-indexer/pull/418) ? superseded by #425 (`/api/source` cache already shipped)
- [#419](https://github.com/Khelsutra/badminton-highlight-indexer/pull/419) ? superseded by #422 (`--output-dir` clobber already fixed)
- [#420](https://github.com/Khelsutra/badminton-highlight-indexer/pull/420) ? 4/7 files superseded by #421/#423; 3 real residuals carried into #429

**Taken over & merged (re-verified on fresh CI, not the stale check):**

- [#416](https://github.com/Khelsutra/badminton-highlight-indexer/pull/416) ? merged `5613b8d` (P6, R1-18 GDrive stream/safe-put)
- [#417](https://github.com/Khelsutra/badminton-highlight-indexer/pull/417) ? merged `e0937f3` (P7, R1-21 Cloud Run poll-timeout salvage)

**Audit docs reconciled:** [#429](https://github.com/Khelsutra/badminton-highlight-indexer/pull/429) marks health-plan **P6/P7 Done**, records the PR-dispositions table, and fixes the genuine doc contradictions #420 flagged (yolo\_hybrid ByteTrack-licensing docstring, DATA\_IN\_GCS \$5 gap table, CODE\_CLEANUP \$6-anchor + main.py 1448?2360). Local ruff + md-link checks pass.

I'm watching #429's CI now and will merge it on green, then clean up the worktree and refresh memory. (#390 left untouched per your exclusion.)

### 135. user (2026-07-02T08:40:26.331Z)

Can you make docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md as the umbrella code audit doc and merge everything else in it?

the older audits can be archived in docs/archive while only the latest one remains.

### 136. assistant (2026-07-02T08:41:17.087Z)

Before I restructure governance docs, let me get the lay of the land ? the in-flight #429 status, which audit-like docs exist, the archive dir layout, and how the umbrella audit report is structured. This restructuring is consequential and there are a couple of judgment calls, so I want facts first.

### 138. assistant (2026-07-02T08:43:29.683Z)

The doc landscape is clear. In engine `docs/` the audit-family docs are:

- \*\*`AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md`\*\* (607 lines) ? the umbrella target (multi-repo findings).

- \*\*`CODE\_CLEANUP\_AUDIT\_2026-06-24.md`\*\* (282 lines) ? older engine audit + its Phase-1/2 tracker.

- \*\*`CODE\_AUDIT\_AND\_TEST\_HARDENING.md` / `DEFERRED\_HARDENING\_PLAN.md` /

`HARDENING\_LOOP\_HANDOFF.md`\*\* ? already thin pointer-stubs; full content already in

`docs/archives/`.

- `***KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md***` (214 lines) ? the `**live**` execution tracker for `*this*` 2026-07-02 audit.  
- `MONETIZATION_AUDIT.md` is already archived. (Real archive dir is ``docs/archives/``, not ``docs/archive`.``)

Folding the older `*audit reports*` in + archiving them is unambiguous. The one real fork ? which materially changes the doc architecture and `DOC_STATUS` governance ? is the fate of the `**live remediation tracker**`. Let me confirm that before doing 200KB+ of doc surgery.

#### 139. user (2026-07-02T08:43:48.344Z)

Your questions have been answered: "For the umbrella consolidation, I'll fold the older `CODE_CLEANUP_AUDIT_2026-06-24 findings/status` into `AUDIT_REPORT_...2026-07-02.md` and archive it, and retire the already-stubbed June-2026 hardening pointers (their full content is already in `docs/archives/`). The one real fork is the LIVE remediation tracker (`KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md`) ? the active execution board with the P-row status (P6/P7 just merged, P8+ open). What should happen to it?"="Fold into umbrella (Recommended)". You can now continue with these answers in mind.

#### 140. assistant (2026-07-02T08:44:37.997Z)

Decision recorded: `**fold the live tracker into the umbrella**` ? one living code-audit doc; archive ``CODE_CLEANUP_AUDIT_2026-06-24`` + the health plan + retire the hardening stubs; flip the umbrella to a living/IN-PROGRESS tracked project.

Also, #429's CI just passed (exit 0). Let me finish the prior task by merging #429, then set up the consolidation.

#### 141. user (2026-07-02T08:44:47.540Z)

```
=== #429 final checks ===
MERGEABLE CLEAN
=== squash-merge #429 ===
=== master head ===
65983ac docs: reconcile audit docs to shipped state + record PR dispositions (#429)
e0937f3 fix(compute): rescue-or-cancel on Cloud Run bucket-poll timeout (R1-21) (#417)
5613b8d fix(storage): gdrive-api ? chunked streaming download + loss-proof idempotent put (#416)
```

#### 142. assistant (2026-07-02T08:45:02.395Z)

#429 merged ? master at ``65983ac``. Prior task complete. Now the umbrella consolidation. Let me set up a fresh worktree branch off the new master, inventory every inbound reference to the docs I'll archive (so no link breaks), and read the `DOC_STATUS` register.

#### 143. user (2026-07-02T08:45:03.428Z)

Chapter marked: "Umbrella audit consolidation". Continue your current work.

#### 144. user (2026-07-02T08:45:09.032Z)

```
HEAD is now at 65983ac docs: reconcile audit docs to shipped state + record PR dispositions (#429)
branch 'docs/umbrella-audit-consolidation' set up to track 'origin/master'.
Switched to a new branch 'docs/umbrella-audit-consolidation'
docs/umbrella-audit-consolidation
65983ac docs: reconcile audit docs to shipped state + record PR dispositions (#429)
```

#### 145. assistant (2026-07-02T08:45:15.142Z)

Worktree ready on ``docs/umbrella-audit-consolidation``. Now inventory all inbound references to the docs I'll archive (to avoid breaking links) and read the `DOC_STATUS` register.

#### 146. user (2026-07-02T08:45:18.230Z)

```

1 # Documentation Status & Archival Register
2
3 > **Status:** ? **LIVING** ? the single board for doc **lifecycle + archival due-
diligence**. **Last full review:** 2026-07-02.
4 > **Update cadence:** whenever a doc changes lifecycle state (created / shipped a
milestone / delivered / archived), and re-review at each clean-slate.
5 > **Why this exists:** so we can (a) **review completeness** at a glance, (b) **update
it as work finishes** to prove we're done, and (c) **never archive a foundational doc without
honestly updating it first** (owner directive, 2026-06-21).
6
7 ---
8
9 ## 0. How to use this
10 - **Reviewing now?** Read §4 (the open findings/actions) ? that's what needs attention.
§3 is the full register.
11 - **Marking something complete?** Update the doc's own **§7 progress tracker** (the
source of truth for *its* completeness), then flip its row here, then ? if terminal ? run the §2
archival checklist.
12 - **This register does NOT duplicate completeness detail** ? it indexes lifecycle +
archive-readiness and points to each tracked doc's §7.
13
14 ## 1. Lifecycle legend
15 `DRAFT ? IN PROGRESS ? DONE/DELIVERED ? ARCHIVED`. Plus: **LIVING** (permanent
reference, never "done"), **PROPOSAL/DESIGN** (owner-gated, not started), **REPORT** (a terminal
record of a run/launch), **CONVENTION** (a standing rule/guide).
16
17 ## 2. Archival due-diligence checklist ? *the repeatable process (do NOT just `git
mv`)*
18 Before a foundational/tracked doc moves to `docs/archives/`:
19 1. **VERIFY claims against the code** ? no stale assertions; tag load-bearing facts
`[verified]`. (A doc that says "nothing built" when code shipped is *not* archive-ready ? fix it
first.)
20 2. **Flip Status ? DELIVERED / DONE / REJECTED + a completion note** ? what shipped,
where (PRs, paths, artifacts), and what was **deferred / carried forward**.
21 3. **Update ALL inbound references** ? `docs/README.md` index, `CLAUDE.md`,
`docs/NEXT_STEPS.md`, and any cross-doc links ? the new path + status.
22 4. **Keep the lineage** ? ADR forward/back-links + "supersedes / superseded-by" so the
evolution stays traceable.
23 5. **`git mv` the whole dir/file ? `docs/archives/past_projects/`** (terminal-state
ONLY; live docs stay at `docs/` top level). Relative links inside become historical (note this
in the doc's header).
24 6. **Record the move** ? flip the row here to §3e + a line in memory `current-state`.
25
26 > **Worked example (the template):** **DECOUPLED_COMPUTE ? #270** ? verified M0?M2+M3.5
delivered on GCP, flipped ??? DELIVERED with a completion note (incl. carried-forward
WASB-C3/DPA/`md5`), reindexed `docs/README` + `past_projects/README`, kept the ADR-010?014
lineage, then `git mv` to `docs/archives/past_projects/DECOUPLED_COMPUTE/`.
27
28 ## 3. The register
29
30 ### 3a. Tracked projects ? lifecycle docs (archive when DONE; each doc's §7 is the
completeness source-of-truth)
31 | Doc | Status | Archive-ready? | Next action |
32 |---|---|---|---|
33 | `COMPUTE_DECOUPLED_SERVING/` | **IN PROGRESS** ? M0 approved + **M1?M9 LARGELY
SHIPPED** (#279?#290; M5 #286, M6 #287, M8 #288, M9-auth #290 all merged, default-OFF); Gen-0
weights pushed (`weights/0.1.0-l4/`) | No | M11 flywheel + M12 gdrive-api (owner residual:
counsel/prices/OAuth/real-run within the D17 cap) |
34 | `RALLY_QUALITY_RESEARCH.md` | Foundation, **tracked & ACTIVE** (§7) | No | Drives the
R-series; complete when §7.1 single quality number is attributed |
35 | `R2_EVAL_METRIC_DESIGN.md` | IMPLEMENTED (augmenting) | No (gates R4 + dual-eval;
ablation pending) | Promote-or-reject toLf1 as the gate (ablation) ? then archive with the
R-cluster |
36 | `R1_MILESTONE_LAUNCH_REPORT.md` | LAUNCHED (#204) ? terminal record | Soon (with the
R-cluster) | Keep with R-series for narrative; archive when the track wraps |

```

37 | `RALLY\_DETECTION\_GAP\_CLOSURE.md` | DRAFT (owner-gated) | No | G1?G3 levers; part of the R/quality cluster |

38 | `RALLY\_DETECTION\_FIXES\_PLAN.md` | **\*\*DONE\*\*** ? findings A/B/C resolved; P2b promoted `inactivity\_temporal\_density` default-ON (#396) | With the R-cluster (deferred per its header; gate = R2 toIF1 ablation + \$7.1 number) | Archive with the R-series when the track wraps |

39 | `RALLY\_DETECTION\_CODE\_REVIEW.md` | Terminal snapshot ? findings A (#394), B (#394 ? promoted #396), C (`sdc#50`) all resolved | With the R-cluster | Archive with the R-series |

40 | `PER\_VIDEO\_WORKSPACE.md` | DRAFT, IN PROGRESS (P0 = #264) | No | ? supersede-reconcile (finding #1) DONE; P3 de-hardcode base ? via #282; remaining P1?P6 (P1 v6 migration coordinates with M8's v6 cost-ledger ? version bump authored once) |

41 | `MULTI\_SIGNAL\_FUSION\_PLAN.md` | P1 DONE; P2+ owner-gated | No | P3/P4 (learned fusion, audio) ? needs GPU golden features |

42 | `EXPERIMENT\_HARNESS.md` | P1 IMPLEMENTED | No | A/B + promotion gate; supports the quality track |

43 | `PROMINENT\_COURT\_DETECTION.md` | DRAFT (owner-gated) | No | C-series; multi-track selection design |

44 | `EXECUTION\_POLICY.md` | P1 SHIPPED; P3b next | No | Async job policy; reused by Cloud Run dispatch |

45 | `GOLDEN\_REGRESSION\_FIXTURES.md` | IN PROGRESS (owner-gated) | No | Golden eval fixtures |

46 | **\*\*Data layer\*\*** ? `docs/data\_pipeline/` (`GOLDEN\_SET\_IMPLEMENTATION` . `GOLDEN\_SET\_PHASE1\_VIDEOS` . `GOLDEN\_VIDEOS` . `VIDEO\_RECORDING\_GUIDELINES` . `GOLDEN\_DATA\_SHARING`) | LIVING (data, **\*\*no-ML\*\***) | n/a | Relocated 2026-06-21 to the isolated data pillar; tracked via `data\_pipeline/README.md`. Roora *\*vendor\** docs archived ? `archives/roora-vendor/`. |

47 | `CODE\_CLEANUP\_AUDIT\_2026-06-24.md` | **\*\*IN PROGRESS\*\*** ? Phase 1 COMPLETE (14 items shipped); Phase 2 nearly done (P8/P9/P11-P15/P17 merged #373-#386). Remaining: P10 (main.py split, stalled ? PR #390 CONFLICTING) + P16+ (Phase 3). | No | Re-cut P10 split; finish P16+ Phase 3 items |

48 | `KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN.md` | **\*\*IN PROGRESS\*\*** ? five-repo 2026-07-02 audit execution board; docs-only tracking bootstrap started; post-sync completions and pushback recorded | No | Execute waves 1-6 as one small PR per row; keep section 7 current |

49 | `DECISION\_SNAPSHOT\_REGRESSION.md` | **\*\*DRAFT ? decisions LOCKED\*\*** (D1?D11 locked 2026-06-25, #383). Zero code shipped for P1?P7. | No | Start P1+P2 (schema + stitch-plan factor); de-risk the P10 main.py split |

50 | `DESKTOP\_APP\_PLAN.md` | DRAFT (owner-gated, nothing built) | No | P0 compute-feasibility spike; relates to truly-local profile |

51 | `OWNED\_MODEL\_IMPLEMENTATION\_PLAN.md` | PLAN/roadmap (owner-gated) | No (authoritative roadmap) | Gen-0?Gen-2; the owned-model track |

52 | `PERSONALIZATION\_PLAN.md` | DESIGN ? owner-adopted; Phase-0 | No | Per-user models (DB v5 store landed) |

53 | `UI\_ALPHA\_EXECUTION\_PLAN.md` | ACTIVE | No | khelsutra UI alpha track |

54 | `I18N\_PLAN.md` | Design (P0); **\*\*in implementation\*\*** (adapted) | No | Executed in `khelsutra/docs/FRIENDLY\_AND\_MULTILINGUAL.md` (P1?site/, P3?web/); P2 backend stays here, owner-gated |

55 | `POST\_166...RISK\_ASSESSMENT.md` | Plan for owner review | No | Milestones/risk doc |

56

57 **### 3b. Foundational / strategy references (LIVING ? archive only if **\*\*superseded\*\***, not when "done")**

58 | Doc | Status | Note |

59 | ---|---|---

60 | `PLATFORM\_ARCHITECTURE.md` | Strategy/research | The `ComputeBackend`/`StorageBackend` registries ? realized by COMPUTE\_DECOUPLED\_SERVING |

61 | `COMMERCIALIZATION.md` | ? LIVING | Strategy; carries WASB-C3 |

62 | `VIDEO\_LOCALITY\_MODEL.md` | THINKING DOC | L0 fully-local = the truly-local profile |

63 | `HOSTING\_PLAN.md` | PROPOSAL | **\*\*? partly overtaken by ADR-013 + the shipped site ? verify (finding #5)\*\*** |

64 | `UI\_PROPOSAL.md` | PROPOSAL (partly shipped) | UX half **\*\*in implementation\*\*** ? `khelsutra/docs/FRIENDLY\_AND\_MULTILINGUAL.md`; currency banner added (finding #5 ? for this doc) |

65 | `STORAGE\_SHARING\_MODEL.md` | DRAFT (co-design pending) | ? |

66 | `ANALYZERS\_AND\_RECONCILERS.md` | DESIGN (owner-gated) | ? |

67 | `ROADMAP.md` / `CODE\_MAP.md` / `HOW\_RALLY\_DETECTION\_WORKS.md` / `KHELSUTRA\_PRODUCT\_OVERVIEW.md` | LIVING references | Keep current; not archive targets |

68

69       ### 3c. Reports & terminal records (archive candidates once their track wraps)

70       | Doc | Status | Note |

71       |---|---|---|

72       | `REAL\_FOOTAGE\_VALIDATION\_REPORT.md` | validation complete | Motivates R2; archive with the R-cluster |

73       | `RALLY\_DETECTION\_QUALITY\_REPORT.md` | report | Quality snapshot; part of R-cluster |

74       | `QUALITY\_ITERATIONS.md` | LIVING empirical log | **\*\*Keep\*\*** ? the paper-backbone ablation log ([[paper-coauthor-aim]]) |

75       | `CODE\_AUDIT\_AND\_TEST\_HARDENING.md` · `HARDENING\_LOOP\_HANDOFF.md` · `DEFERRED\_HARDENING\_PLAN.md` | COMPLETED ? **\*\*top-level pointer stubs\*\*** (archived copies exist) | **\*\*? confirm intentional stubs (per #165) vs finish-archiving (finding #4)\*\*** |

76

77       ### 3d. Conventions / guidelines / templates / runbooks (permanent ? do not archive)

78       `PROJECT\_DOC\_TEMPLATE.md` · `NEXT\_STEPS.md` (? refreshed 2026-06-21) · `BACKLOG.md` · `EVALUATION.md` · `ABLATION\_LAYER.md` · `SETUP\_NEW\_MACHINE.md` · **\*\*`CREATING\_REELS.md`\*\*** (? end-user usage guide ? install ? process ? pick ? reel; LIGHT tier; added 2026-06-23) · **\*\*`CONVERT\_GCS\_VIDEOS\_TO\_HIGHLIGHTS.md`\*\*** (? operator runbook ? `gs://` videos ? reels on L4 Cloud Run; verified e2e 2026-06-23) · `TRACKNET\_WSL\_SETUP.md` · `README.md`. \*(2026-06-21 relocation: the data-layer guides moved ? `data\_pipeline/`; the field-ops + Roora docs ? `archives/{field-pmf,roora-vendor}/`.)\*

79

80       ### 3e. Already archived (`docs/archives/`)

81       `past\_projects/DECOUPLED\_COMPUTE/` (? 2026-06-21, #270) · `past\_projects/low-regret-moves/` · **\*\*`field-pmf/`\*\*** (field-ops + customer-feedback, 2026-06-21) · **\*\*`roora-vendor/`\*\*** (annotation-vendor engagement, 2026-06-21) · `PER\_VIDEO\_OUTPUT\_LAYOUT-SUPERSEDED-2026-06-21.md` · `CODE\_AUDIT\_AND\_TEST\_HARDENING-COMPLETED-2026-06-14.md` · `DEFERRED\_HARDENING\_PLAN-COMPLETED-2026-06-14.md` · `HARDENING\_LOOP\_HANDOFF-COMPLETED-2026-06-14.md` · `COMMERCIAL\_READINESS\_REVIEW.md` · `MONETIZATION\_AUDIT.md` · `TEST\_RUN\_SUMMARY.md` · `research/` · `checkpoints/` · `quality-iterations/`.

82

83       ### 3f. ADR log ? `docs/archives/decisions/DECISIONS.md`

84       **\*\*ADR-001 ? ADR-014\*\*** (14, all ratified). The compute/serving lineage: **\*\*ADR-005 ? 008 ? 009 ? 010 ? 011 ? 012 ? 013 ? 014\*\***. ADR-014 was **\*\*RATIFIED 2026-06-21\*\*** (owner M0 sign-off for COMPUTE\_DECOUPLED\_SERVING).

85

86       ## 4. Open due-diligence findings / actions (2026-06-21 review)

87

88       > **\*\*? Doc-restructuring done (2026-06-21, owner-directed):\*\*** field-ops/customer-feedback ? `archives/field-pmf/`, Roora annotation-vendor ? `archives/roora-vendor/`, and a no-ML **\*\*data layer\*\*** carved into `docs/data\_pipeline/`. Inbound + outbound links rewired; three dir READMEs added (the `data\_pipeline` one sets the "no segmentation/stitching" boundary).

89       1. **\*\*? RESOLVED (2026-06-21) ? `PER\_VIDEO\_WORKSPACE.md` supersedes `PER\_VIDEO\_OUTPUT\_LAYOUT.md`.\*\*** Folded forward the `video\_slug` naming option (workspace §8.5) + the `output/GX010125\_run/` manual-prototype precedent; predecessor archived ? `docs/archives/PER\_VIDEO\_OUTPUT\_LAYOUT-SUPERSEDED-2026-06-21.md`; `CODE\_MAP.md` repointed.

90       2. **\*\*? RESOLVED (2026-06-21) ? `NEXT\_STEPS.md` refreshed\*\*** with a current 2026-06-21 state + a **\*\*cross-track prioritized pending list\*\***; the 2026-06-13 owned-model/quality body is kept (clearly marked) as that track's detail.

91       3. **\*\*R-series / quality cluster is ACTIVE\*\*** (`R1`, `R2`, `RALLY\_DETECTION\_GAP\_CLOSURE`, `RALLY\_QUALITY\_RESEARCH`, `QUALITY\_ITERATIONS`, `REAL\_FOOTAGE\_VALIDATION\_REPORT`, `RALLY\_DETECTION\_QUALITY\_REPORT`). **\*\*Do NOT archive yet\*\*** ? archive as a **\*cluster\*** once R2 is promoted-or-rejected as the gate + §7.1's single number is attributed. (Owner already confirmed "leave as is", 2026-06-21.)

92       4. **\*\*Confirm the COMPLETED top-level stubs\*\*** (`CODE\_AUDIT\_AND\_TEST\_HARDENING`, `HARDENING\_LOOP\_HANDOFF`, `DEFERRED\_HARDENING\_PLAN`) are intentional pointer-stubs (per #165) ? or finish-archive them so there's one copy.

93       5. **\*\*`HOSTING\_PLAN.md` / `UI\_PROPOSAL.md` are PROPOSAL but partly overtaken\*\*** by ADR-013 (DO dropped) + the shipped khelsutra site. **\*\*? `UI\_PROPOSAL.md` banner added (2026-06-21)\*\*** ? its UX half is now tracked in `khelsutra/docs/FRIENDLY\_AND\_MULTILINGUAL.md`; the `I18N\_PLAN.md` localization track is likewise in implementation there. **\*\*`HOSTING\_PLAN.md` banner still pending\*\*** (ADR-013 already noted in it).

94       6. **\*\*? RESOLVED (2026-06-21) ? `COMPUTE\_DECOUPLED\_SERVING` M0 approved + M1?M4 SHIPPED\*\*** (#279/#280/#282/#283); all §8 gating Qs locked (D7?D17); M5+ default-OFF code batch authorized (owner residual: counsel ToS/DPA, real GCP prices, OAuth app, real cloud run within the D17 \$100/?10k cap).

95  
96       ## 5. Maintenance  
97       Update a row when its doc changes lifecycle; run §2 before any archive; re-review §4 at  
each clean-slate. This register + the §2 checklist are the operational form of the `CLAUDE.md`  
archive policy and [[working-agreement-tracked-project-docs]].  
98

#### 148. assistant (2026-07-02T08:46:10.057Z)

This is a mature, governed docs system ? DOC\_STATUS.md has a strict \$2 archival checklist (verify ? flip status+note ? update ALL inbound refs ? keep lineage ? git mv ? record). I'll follow it. Notably this also resolves DOC\_STATUS finding #4 (the hardening stubs). Let me pinpoint the actual markdown *\*links\** I must repoint (mentions/code-comments don't break link-check) and read the umbrella's header.

1 # kheksutra-guru multi-repo tech-debt & critical-fix audit ? 2026-07-02
2
3 > **Snapshot note (post-sync reconciliation):** this report was verified against the
SHAs listed below. Several findings were fixed after that snapshot was pulled locally on
2026-07-02. Use `docs/KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md` as the live execution tracker
and source of truth for completed/disputed/open items.
4
5 Two-round multi-agent audit: 14 read-only finders -> 115 raw findings -> dedup 110 -> 45
adversarially verified (round 1) + 8 more (round 2). Every finding below was CONFIRMED by an
independent adversarial verifier against origin-head working trees (engine e410136, kheksutra
f9eea14, rally-annotator 3d604bc, sdc adcd206, obsreport 1f72c1c).
6
7 ## Repo health summaries
8
9 ### engine:audit-doc-reconcile
10 Engine repo is healthy and fast-moving: master at e410136 (2026-07-02), 22 commits
merged since 06-26, ~1500 tests, coverage ~85%, CI green on master (trusted). The per-project
docs' own $7 trackers are remarkably accurate ? every ? claim I spot-checked (D13/ByteTrack
#386, 01 Gemini GC #380, B1 #385, B2/P17 #378, B3/B6 config fixes) is verifiably true in code.
The rot is concentrated in the INDEX layer (DOC_STATUS.md, docs/README.md, BACKLOG.md,
NEXT_STEPS.md header), which lags reality by ~15 shipped PRs, and in two designed-but-unstarted
regression tracks (M4 quality floor, decision-snapshot). The single biggest live debt: the
main.py god-module split (D1/P10) is stalled ? PR #390 sits open and CONFLICTING since 06-26
while main.py grew 52% (1448?2198 lines) from 8 new endpoint PRs landing in it.
11
12 ### engine:correctness
13 The engine is a ~2200-line god-module orchestrator (backend/main.py) over a well-
factored worker/storage/compute substrate; master is current (HEAD e410136) and CI is trusted
green with ~1500 tests. The async job plumbing (claim_due_job CAS + single-worker executor +
single-instance DB lock) and the schema ladder (v9, idempotent ALTERs, backup-before-migrate,
downgrade guard) are genuinely solid ? most crash-safety patterns hold up under scrutiny. The
dominant hot-path debt is lifecycle, not logic: paid-segmenter idempotency is still missing
(#340 open, confirmed at HEAD), remote-input scratch copies are never reclaimed anywhere
(acquire_local_input mkdtemp-per-call, worst on /api/source where every browser Range request
re-downloads the full remote video), and the packaged-app path story is inconsistent (upload_dir
CWD-relative vs app-home-rooted output_dir; config output.output_dir dead on the CLI path).
Cloud-serving has an owner-gated GPU cost leak (poll timeout never cancels the Cloud Run
execution). Findings are 2xP1, 5xP2, 2xP3; only #340 is already tracked.
14
15 ### engine:structure

```

16 Engine repo at master e410136 (current with origin, 2026-07-02). Backend is ~28.9k lines of Python across ~29k total; merge velocity is high (9 PRs touching main.py alone since 06-26). CI is green on master per audit ground rules. The dominant structural debt is the D1 god-module problem: backend/main.py is now 2,198 lines and grew +401 lines (+22%) in the six days since split PR #390 was opened ? that PR is now CONFLICTING and rotting. The transitional module-globals shim (extracted API modules re-importing backend.main at call time) creates a 3-module import cycle and keeps the two largest modules mypy-quarantined. Secondary debt: four more >800-line modules, duplicated Stage-2 AI-handoff logic across two live segmenter families, and small hygiene items (7 tracked scratch/ scripts violating the repo's own convention, 4 stale remote branches). Notably, audit item D13 (ByteTrack -> trackers) is verified DONE ? no vendored ByteTrack directory exists and person\_detector.py uses trackers.ByteTrackTracker; only a stale docstring remains.

17

18 `### engine:ci-tests`

19 Engine CI is healthy: master is 15/15 green (last red master push was 2026-06-24, fixed same day), the Tier-1 nightly (nightly.yml) has run green daily since it landed 2026-06-26 with zero nightly-failure issues ever opened, and 1558 tests collect cleanly. All jobs in both workflows carry per-job timeouts, local ruff 0.15.16 passes clean, and the coverage floor (70) is enforced in both the per-PR and nightly full-suite lanes. Debt is concentrated in four places: the ci.yml/nightly.yml copy-paste duplication tracked by #384 has now actually drifted (ci.yml gained a link-check lane on 06-30 that nightly never got, plus timeout divergence); PR #390 (the D1 god-module split) has sat OPEN with a red full-suite check since 06-26; roughly 27 of 1558 tests silently skip in CI (17 obsreport-gated, 2 reportlab/pypdf, 7 golden-data-gated by design, 1 platform) with no -ra visibility; and the mypy gate is environment-dependent (a misplaced type-ignore in backend/storage/gcs.py makes mypy fail on any box with google-cloud libs installed while CI stays green).

20

21 `### engine:security-config`

22 Engine repo (Python, ~1500 tests, CI trusted green on master at e410136). Security/config posture is largely healthy: deploy/gcp/buckets.env single-source (#410) is properly wired into every deploy script, no literal secrets anywhere in the tree (grep for AIza/sk-/ghp\_/private keys = zero), redaction and edge-auth (CF Access JWT, default-off) are carefully built, startup exposure checks (M9) cover jail/team+AUD/auth-extra/host-allowlist, CI has copyleft license-fail lanes and no pull\_request\_target/secrets usage, and .gitignore is UTF-8 with artifacts/, output/, \*.db all ignored and untracked. Remaining debt clusters in four places: a wildcard CORS default that undermines the localhost-appliance DNS-rebinding guard, the still-open #327 path-jail-vs-gs:// ingest gap, supply-chain pinning (mutable git tag duplicated in 5 files, no lockfile), and small hygiene items (tracked scratch/ files, retired-D0 deploy dir still live-coupled).

23

24 `### khelsutra:code`

25 The khelsutra repo is in good code health: the web/ SPA is strict-TS (strict + noUnusedLocals/Parameters, web/tsconfig.json:17-20), has 29 test files with a CI-enforced ratcheted coverage floor (statements 92 / branches 87 / functions 84 / lines 92, web/vite.config.ts), and components stay small (largest is App.tsx at 417 lines; the just-landed VideoLibrary.tsx is 101 lines). CI (3 jobs: site tests, web typecheck+coverage+build, real-browser layout/render/a11y) is green on master (run 28532935786). i18n key parity is perfect ? 473 keys in all 6 locales, 0 missing/0 extra, guarded by locales-drift + hygiene tests ? and the vendored rally-annotator core is byte-in-sync with upstream HEAD (3d604bc). API client vs engine: every endpoint the SPA calls exists on the engine with matching shapes; no contract drift found. The real debt is at the seams: the engine's vendored SPA bundle is 8 feature-PRs stale (built 2026-06-22 vs SPA source 2026-07-01), and the deploy docs (DEPLOY\_ALPHA.md "Status: LIVE", NEXT\_STEPS.md) still present the droplet retired 2026-06-25 as live infrastructure.

26

27 `### khelsutra:issues-triage`

28 TS/React SPA (web/) + marketing site (site/), ~140 merged PRs, CI green on master (last 5 runs success, ~1.5 min each). All 10 open issues triaged against current code: 6 are still fully valid feature/UX work (#72 #98 #99 #102 #111 #112), 2 are partially fixed but the issue text is now stale (#101 ? async compile #329 removed the 524 at source; #103 ? name-on-reload and fps/resolution landed via #127/#140), and 2 describe infrastructure that no longer exists (#97 #114 ? the D0 droplet alpha was retired 2026-06-25, alpha is paused pending the Cloud Run move). Separately, three repo docs (NEXT\_STEPS.md refreshed 2026-07-01, deploy/DEPLOY\_ALPHA.md, docs/LOCAL\_APPLIANCE\_ARCHITECTURE.md) still claim the retired droplet deployment is LIVE ? the most actionable doc-rot found. Overall debt is low-to-moderate: the codebase is disciplined and well-commented; the debt is concentrated in the processing-UX cluster (#98/#99/#111) and stale

alpha-infra threads.

29

30     ### sdc:audit

31     Small, healthy Python repo (~5.5k LOC in src/, ~250 test functions across 24 files) at Khelsutra/sports-data-collector, master = adcd206 (PR #53, busy\_timeout). CI is green (last 8 runs all success, ~20s each) but is pytest-only: no ruff/mypy/coverage gate, and default ruff currently reports 24 errors on real sources. Zero open issues/PRs; the 2026-06-24 CODE\_HEALTH\_PLAN completed and was archived (#49), leaving only parked A1/A3 in docs/NEXT\_STEPS.md. Ingestion/error handling is genuinely good (CurationError guards, UPSERT-not-REPLACE, versioned PRAGMA user\_version migration ladder, defusedxml). The working tree is dirty with two stale artifacts: an untracked full second clone of the repo nested at sports-data-collector/sports-data-collector/ (old avidullu remote, HEAD at PR #29, clean, zero unique work ? safe to delete) and a 3-week-old uncommitted .gitignore hunk adding artifacts/ that cites the indexer's ADR-008 but contradicts it. Overall debt level: low; main items are workspace hygiene, CI gates, and doc pointer rot from the archive move.

32

33     ### annotator:audit

34     Small, well-kept two-frontend labeling tool: a 1497-line VLC Lua extension (vlc/rally\_annotator.lua, v1.7.1) and a Chrome MV3 extension (web/, v0.1.0) sharing a byte-compatible CSV format. Both CI workflows (tests, web-extension CI) are green on HEAD (last 15 runs all success; HEAD = PR #25, 2026-06-22); no open PRs; 2 open issues (#26 CSV provenance, #22 native i18n review) ? both verified still unaddressed. Web unit coverage is enforced (95/82 floors) and there is a real-Chromium per-locale E2E. README install/run instructions are accurate (VLC copy-file install; web npm install + build path is exactly what green CI runs). Debt is concentrated in three places: the content script's always-on full-DOM polling on every page, the locked LD-i8 locale-persistence decision being documented-but-unimplemented on the web side, and machine-draft translation catalogs pending native review. The sibling non-git 'Annotation Setup' dir is NOT a duplicate/predecessor of this repo ? it is the local annotation-data workspace (golden .rallies.csv labels since migrated to GCS, ~18MB trajectory CSVs, and Roora pilot-review artifacts that appear to exist nowhere else).

35

36     ### obsreport:audit

37     Tiny, high-quality private Python lib (9 src modules, 8 commits, all authored 2026-06-07; frozen since). Release hygiene is excellent: tag v0.1.3 == local HEAD == origin/main (1f72c1c), pyproject.toml version == version.py == 0.1.3, and the committed JSON Schema is byte-identical to a fresh ReportEnvelope.model\_json\_schema() dump (verified read-only). 74 tests pass locally in 0.43s and the code is clean (no eval, closed Literal vocabularies, never-raise IO), but the repo has ZERO CI (gh api: 0 workflows), no issues/PRs, and 3 ruff errors sit unchecked. The engine pins it correctly to tag v0.1.3 (not a floating branch) but via the stale pre-transfer org URL (avidullu, repo now lives in Khelsutra ? works only via GitHub redirect). The worst finding is consumer-side: sports-data-collector declares `obsreport>=0.1.3` as a plain PyPI requirement while the name `obsreport` is unclaimed on PyPI (404) ? a dependency-confusion window. The engine?obsreport integration tests never run in any CI (engine CI deliberately omits the private dep; reporting tests importorskip).

38

39     ### nongit:dirs

40     Two intentional but unversioned dirs. "Annotation Setup" (4.9 GB) is the golden-corpus staging area: Golden Labelled/ (6 .rallies.csv) and Trajectories/ (20 WASB CSVs, 18 MB) are VERIFIED safely migrated to gs://khelsutra-rally-corpus (15 labels + 15 trajectories uploaded 2026-06-22, listed live), so the dominant loss risk is NOT the eval corpus ? it is the Archive/Roora pilot record (3 raw vendor videos 4.86 GB + CVAT deliverables + feedback + corrected golden labels), which exists nowhere else (0 roora objects in the bucket; the engine repo archives only the guidelines). "khelsutra-screencast" (107 MB) is the documented artifacts sink of khelsutra's committed e2e screencast harness (playwright.config.mjs writes .././khelsutra-screencast/raw), but it also holds 8 ad-hoc Playwright QA scripts and doc-cited DoD evidence that are unversioned; only 2 of its videos are backed up to the promo bucket, and the 5 numbered checkpoint screencasts cited in STUDIO\_MEDIA\_LIFECYCLE.md are absent from this machine entirely. Engine docs reference the Annotation Setup dir by three different, all-nonexistent paths, and DATA\_IN\_GCS.md's \$5 gap table contradicts its own \$7 done-markers. Overall: data-loss exposure is concentrated in one 4.9 GB vendor-pilot folder plus moderate doc-rot; no secrets found in either dir.

41

42     ### cross:repo

43     Workspace of 5 git repos (all just pulled to origin master/main, zero extra worktrees) plus 2 non-git data dirs ("Annotation Setup" 4.9G raw video/labels ? the n=6 golden labels ARE

versioned inside sports-data-collector's committed data/sports\_metadata.db per commit 9e6f204, so the dir is raw-media overflow; khelsutra-screencast 107M e2e artifacts). The engine->SPA runtime API contract is coherent in source: every SPA-called endpoint exists in backend/main.py + backend/api/uploads.py, and the new fps/resolution fields landed on both sides (engine main.py:516-517 via #413; SPA types.ts:44-45 + lib/video.ts:35-36 via #140). The real cross-repo drift is the COMMITTED vendored SPA bundle (backend/ui @ khelsutra ed33a515, 2026-06-22) now 10 web/ commits behind, with a skew guard that by design only catches engine-side API\_VERSION bumps. CI maturity is very uneven (engine: 4 guard lanes; khelsutra: excellent incl. coverage floor + layout/all; sdc: pytest-only; rally-annotator: ok; obsreport: none), and docs in both engine and khelsutra still describe the DO droplet deploy as LIVE a week after its 2026-06-25 retirement. Trees are clean except sports-data-collector (uncommitted .gitignore WIP + a stale full nested self-clone), and 20 merged branches linger across remotes/locals.

```
44
45 ### engine:issues-triage
46 Engine repo is active and healthy on master (last merge #413 on /api/videos; CI trusted
green; ~1500 tests, coverage floor 70 enforced in both CI lanes). 13 issues open (not 14) plus
one PR. Triage found one live P0 cost bug (#340: /api/process re-runs the paid Gemini segmenter
for an already-processed video_id ? verified no dedup short-circuit exists in current code), the
D1 god-module-split PR #390 now CONFLICTING and 6 days stale while main.py grew to 2198 lines,
and several issues with partially-stale premises (#388 half-done since PR #234, #331/#326/#328
still citing the retired DO droplet, #175 referencing a design doc that does not exist in the
workspace). No fully fixed-but-open issues; the debt level is moderate and mostly well-tracked,
but the issue text drift means several tickets need scope-correcting comments before anyone acts
on them.
47
48 ### engine:perf-resource
49 Engine repo at origin/master e410136 (clean tree). Performance/resource-lifecycle
posture is mixed: the deliberately-built safeguards are genuinely wired and healthy ? SQLite
goes through a single choke point with WAL + busy_timeout=30000 + connect timeout=30s
(backend/infrastructure/database.py:48-57; the only sqlite3.connect in backend/, so the engine
does NOT have sports-data-collector's contention gap), keep_frames defaults False with post-
success frame/stage deletion in all three detector runners (config/models.py:61,98;
wasb_runner.py:210; tracknet_runner.py:225; native_wasb_runner.py:315), Gemini chunk files are
removed after analysis (segmenters/gemini.py:289,375-377), the stitcher clips live in a
TemporaryDirectory (compiler.py:419), and no unwaited Popen exists (no zombie risk). The debt is
concentrated where blocking work meets the max_workers=1 job executor: every serving-path ffmpeg
call runs without a timeout (extraction, audio, trim, per-clip encode, concat) so one hung
ffmpeg wedges all job processing; ExecutionPolicy/run_bounded protects only the Gemini generate
call. All four known perf/lifecycle issues (#349 single-threaded streaming decode, #331 CPU-
bound phases, #330 MD5 reuse, #301 scheduled retention sweep) are verified still open and
unimplemented in code, and one untracked leak was found: remote-input scratch copies (rally-
input-*/rally-worker-* mkdtemp dirs) are never deleted and are invisible to
tools/cleanup_caches.py.
50
51
52 ## Confirmed findings ? round 1 (43)
```

### 151. assistant (2026-07-02T08:47:05.429Z)

I have the link map. Before deciding how far to take the hardening stubs, I need two facts: what `check\_md\_links` actually scans (does it check `docs/archives/?`), and the exact link targets in `BACKLOG.md:53` / `DESKTOP\_APP\_PLAN.md:157`. Let me get both.

### 152. user (2026-07-02T08:47:12.191Z)

```
=== check_md_links scan scope (roots / archives / external?) ===
3:Scans tracked ``.md`` files (via ``git ls-files``) and, for each ``[text](dest)`` /
``![alt](dest)``
6: - the target file exists (resolved relative to the linking file, or the repo root for
``/abs``), and
9:SKIPPED: external links (``http(s)``/``mailto``/``tel``/``ftp``/protocol-relative ``//``),
links inside
10:fenced code blocks, and any file under ``docs/archives/****`` ? archived docs are frozen
snapshots whose
11:relative links are historical-by-design (see ``docs/DOC_STATUS.md`` §2). Mirrors
```

```

``tools/leak_scan.py``:
24:#: Source docs under these prefixes are NOT scanned ? archived = frozen snapshots whose
relative
26:EXCLUDE_PREFIXES: Tuple[str, ...] = ("docs/archives/",)
27:#: This tool + its test legitimately embed sample/broken links ? never scan them.
28:SELF_EXCLUDE: Tuple[str, ...] = ("tools/check_md_links.py", "tests/test_check_md_links.py")
33:#: a scheme (`http:`, `mailto:`, ?) or protocol-relative `//` ? external, not our
concern.
34:_EXTERNAL_RE = re.compile(r"^(?:[a-zA-Z][a-zA-Z0-9+.\-]*:|//)")

=== exact markdown-link targets to the 5 docs, across LIVE docs (excluding archives/) ===
docs/BACKLOG.md:53:](archives/DEFERRED_HARDENING_PLAN-COMPLETED-2026-06-14.md)
docs/DEFERRED_HARDENING_PLAN.md:9:](archives/DEFERRED_HARDENING_PLAN-COMPLETED-2026-06-14.md)
docs/DESKTOP_APP_PLAN.md:157:](DEFERRED_HARDENING_PLAN.md)
docs/PLATFORM_ARCHITECTURE.md:49:](DEFERRED_HARDENING_PLAN.md)
docs/PLATFORM_ARCHITECTURE.md:226:](DEFERRED_HARDENING_PLAN.md)
docs/PLATFORM_ARCHITECTURE.md:242:](DEFERRED_HARDENING_PLAN.md)
docs/PLATFORM_ARCHITECTURE.md:580:](DEFERRED_HARDENING_PLAN.md)
docs/README.md:40:](CODE_AUDIT_AND_TEST_HARDENING.md)
docs/README.md:41:](CODE_CLEANUP_AUDIT_2026-06-24.md)
docs/README.md:42:](KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md)

```

### 153. assistant (2026-07-02T08:48:26.379Z)

Now I have everything I need:

- `**md-link-check**` scans tracked ``.md`` but `**excludes `docs/archives/`**` ? so links `*inside*` archived docs won't break; I only fix `**live-doc**` links.
- Live links to repoint: README:40 (hardening stub), README:41 (CODE\_CLEANUP), README:42 (health plan), DESKTOP\_APP\_PLAN:157 + PLATFORM\_ARCHITECTURE x4 (all ? ``DEFERRED_HARDENING_PLAN.md``).
- BACKLOG:53 already points to the archived copy (safe).

This lets me cleanly fold + archive and resolve DOC\_STATUS finding #4 (the hardening stubs). Let me read the current (post-#429) health plan in full so I fold the accurate version.

### 154. user (2026-07-02T08:48:28.370Z)

```

1 # khelsutra-guru health remediation plan
2
3 > **Status:** `IN PROGRESS` ? Wave 1 complete; Wave 2 P5?P7 merged (P8 remaining) .
Owner: Avi . **Created:** `2026-07-02` . **Last updated:** `2026-07-02` (P6/P7 merged +
audit-batch PR dispositions)
4 > **Lifecycle:** `DRAFT -> IN PROGRESS -> DONE -> archived` (move to `docs/archives/`
when DONE)
5 > **Tracking anchors:** Section 7 progress tracker is the source of truth; indexed in
`docs/README.md`; lifecycle row in `docs/DOC_STATUS.md`; live checkpoint in memory `current-
state`.
6 > **Relation to existing docs:** extends `docs/AUDIT_REPORT_khelsutra-
guru_2026-07-02.md`; peer-of `docs/CODE_CLEANUP_AUDIT_2026-06-24.md`; coordinates sibling repos
under `C:\Users\avidu\Projects\khelsutra-guru`.
7 > **Honesty note:** statuses below reflect code/docs checked after pulling all five
repos to origin head on 2026-07-02. The audit report remains a snapshot against earlier SHAs;
this plan is the live tracker.
8
9 ---
10
11 ## 0. TL;DR
12
13 The multi-repo audit found real debt, but several items were already fixed by the time
this plan was created. This doc is the execution board for bringing the five-repo workspace back
to a healthy state without mixing unrelated changes: first a docs-only tracking PR, then small
wave PRs, each branched from the remote default branch, verified against that repo's CI
contract, and merged only when green.
14
15 Highest-risk remaining themes: paid/egress cost leaks in the engine, temp/scratch
lifecycle, one failed mypy fix, stale vendored SPA bundle, missing CI/supply-chain gates in

```

sibling repos, and user-facing SPA processing resilience. Owner-gated work stays flagged, not silently executed.

16

17     **## 1. Problem & goal**

18

19     The audit at `docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md` confirmed a broad health gap across:

20

21     - `badminton-highlight-indexer/` ? engine correctness, resource lifecycle, supply-chain pinning, CI drift, docs governance.

22     - `khelsutra/` ? SPA processing UX, stale engine bundle, stale issue/docs references, E2E coverage gaps.

23     - `sports-data-collector/` ? CI maturity, dirty workspace artifact policy, corpus registry integrity.

24     - `rally-annotator/` ? browser-extension performance/localization fixes, remaining provenance/i18n-quality issues.

25     - `sports-obsreport/` ? no CI and a small customer-facing pluralization defect.

26     - Non-git data dirs ? Roora pilot artifacts and screencast evidence need durable handling.

27

28     Goal: turn the audit into a sequence of reviewable, green PRs that closes the actionable engineering debt, records owner-gated items honestly, and leaves the workspace with current docs, reliable local checks, and no hidden "fresh checkout breaks immediately" traps.

29

30     **## 2. Decisions locked**

31

32     | # | Decision | Source / date | Implication |

33     |---|---|---|---|

34     | D1 | Work from `C:\Users\avidu\Projects\khelsutra-guru` as the multi-repo root. | Owner directive in synced memory, 2026-06-29. | Touch each sub-repo separately; pull/fetch before reading or branching. |

35     | D2 | One small PR per coherent work item; no PR stacking. | `CLAUDE.md` + synced memory working agreements. | Waves below are sequencing groups, not giant branches. |

36     | D3 | Branch from the remote default branch explicitly. | Global git safety rule. | Use `git fetch origin` then `git checkout -b <branch> origin/<base>` for every repo. |

37     | D4 | Stage explicit paths only. | Shared-checkout incident record. | Never use `git add -A`, `.`, or `-u` in this workspace. |

38     | D5 | Coverage and CI gates must not regress. | Owner pre-LGTM rule + repo CI contracts. | Every code PR records which full/CI-equivalent checks ran, current floor, and any unavoidable skip. |

39     | D6 | SPA/UI changes require visual proof. | Owner request, 2026-07-02. | Any `khelsutra/web`, `site`, or extension UI PR must include validated Playwright screenshots/screencast evidence, stored under the existing workspace `khelsutra-screencast/` convention when applicable. |

40     | D7 | Owner-gated work is tracked, not executed. | Repo guardrails. | Cloudflare dashboard cleanup, launch signoff, legal/licensing, corpus promotion, and large media upload decisions remain explicit owner gates. |

41     | D8 | First PR is docs-only. | Owner request, 2026-07-02. | This plan, index/register updates, and audit-status notes land before code waves. |

42

43     **## 3. Current status after syncing**

44

45     All five git repos were fast-forwarded to origin head on 2026-07-02:

46

47     | Repo | Head after sync | Working tree | Notes |

48     |---|---|---|---|

49     | `badminton-highlight-indexer` | `4f148d1` | clean before this branch | Audit report now tracked; doc truth-sync landed; config fixes landed. |

50     | `khelsutra` | `41c9627` | clean | Retired-droplet docs updated. |

51     | `rally-annotator` | `ef97739` | clean | DOM-scan and locale-persistence fixes landed. |

52     | `sports-data-collector` | `9ce5a20` | dirty | `gitignore` hunk pre-exists | Nested stale clone is gone; `obsreport` dependency-confusion fix landed. |

53     | `sports-obsreport` | `1f72c1c` / tag `v0.1.3` | clean | Still has no CI. |

54

```

55 Already completed after the audit snapshot:
56
57 | Audit item | Status | Evidence |
58 |---|---|---|
59 | `R2-5` engine `CLAUDE.md` stale state | Done | Engine PR `#421`, `d80aa02`. |
60 | `R1-13` engine `BACKLOG.md` shipped items stale | Done | Engine PR `#421`, `d80aa02`. |
61 | `R1-14` engine `DOC_STATUS` / docs index stale | Mostly done | Engine PR `#421`, `d80aa02`; this plan adds the missing audit project tracking. |
62 | `R1-19` `output.output_dir` clobbered | Done | Engine PR `#422`, `4f148d1`. |
63 | `R1-20` `upload_dir` CWD-relative | Done | Engine PR `#422`, `4f148d1`. |
64 | `R1-06`, `R1-09`, `R1-36` retired-droplet docs | Done | Khelsutra PR `#142`, `41c9627`. |
65 | `R2-1` rally-annotator hidden panel scans DOM | Done | Rally-annotator PR `#27`, `ef97739`. |
66 | `R2-2` rally-annotator locale persistence | Done | Rally-annotator PR `#27`, `ef97739`. |
67 | `R2-3` collector `obsreport>=0.1.3` dependency confusion | Done | Sports-data-collector PR `#57`, `9ce5a20`. |
68 | `R1-10` stale nested collector clone | Locally resolved | Directory absent after sync/cleanup; not a durable repo change. |
69 | Critic addition: engine `.git` loose video blobs | Locally resolved | `git count-objects -vH` now shows packed repo about 11 MiB, no garbage. |
70 | Critic addition: stale yt-dlp partial debris | Locally resolved | `data/videos` has no `*.part`/`*.ytdl` debris in this checkout. |
71
72 Pushback / reclassification:
73
74 | Audit item | Revised status | Reason |
75 |---|---|---|
76 | `R1-27` misplaced type-ignore in `gcs.py` | Still open; attempted fix failed | Running `python -m mypy backend training --no-incremental` with `google-cloud-storage` installed still fails at `backend/storage/gcs.py:31`. |
77 | `R2-8` upload retention scheduling | Still open, downgraded premise | Scheduling is missing, but the "live droplet accepting uploads" premise is stale after droplet retirement. Treat as hosted-deployment readiness, not an active droplet incident. |
78 | `R1-01` main.py line count | Still open, number changed | `backend/main.py` is now **2360 lines** (was ~1965 when this plan was bootstrapped; the Wave-1 endpoint/fix PRs since land here), still large; `backend/orchestration.py` absent; PR `#390` remains open/stale (tracked as `CODE_CLEANUP_AUDIT` P10 ? re-cut fresh from `origin/master`). |
79 | Audit itself | Snapshot, not live tracker | It was verified against pre-sync SHAs; use this plan for live execution status. |
80
81 Newly noted while reconciling:
82
83 - `docs/CODE_MAP.md` still describes `main()` as assigning `global_config.output.output_dir = args.output_dir`; that should be updated after `#422`.
84 - Engine `pyproject.toml` / `requirements.txt` still reference `avidullu/sports-obsreport` via redirect and a mutable tag.
85 - `rally-annotator` local remote still points at `avidullu/rally-annotator.git`; code sync works via redirect, but it is stale hygiene.
86
87 ### Audit-batch PR dispositions (2026-07-02)
88
89 The audit surfaced an early batch of one-per-finding PRs (**#414?#420**, opened ~04:5x) that a later
90 session then re-implemented **fresh** as the Wave-1/2 PRs. After a per-PR review (independent analysis +
91 adversarial verification against `master`, both high-confidence), their fate was decided:
92
93 | PR | Finding | Fate | Reason |
94 |---|---|---|---|
95 | #416 | R1-18 GDrive stream / safe-put | **Merged** (P6) | Not superseded ? `gdrive_api.py` still whole-file-buffered + deleted-before-create on master; refreshed onto

```

```

master, CI green, taken over. |
96 | #417 | R1-21 Cloud Run poll-timeout salvage | **Merged** (P7) | Not superseded ?
`cloud_run.py` still let `PolicyTimeout` propagate with no cancel; refreshed onto master, CI
green, taken over. |
97 | #414 | R2-5 `CLAUDE.md` truth-sync | Closed ? superseded by #421 | master already
truth-synced. |
98 | #415 | R1-20 `upload_dir` app-home | Closed ? superseded by #422 | master already
routes `upload_dir` through `resolve_output_dir`. |
99 | #418 | R1-03 `/api/source` cache | Closed ? superseded by #425 (P3) | master already
fetch-once + `source_cache`. |
100 | #419 | R1-19 `--output-dir` clobber | Closed ? superseded by #422 | master already
defaults `--output-dir` None + honors config. |
101 | #420 | R1-13/14 docs reconcile | Closed ? 4/7 files superseded by #421/#423; 3
residuals carried forward here | see below. |
102
103 **#390 is out of scope** (owner excluded it) and left open; it is tracked as
`CODE_CLEANUP_AUDIT` P10
104 (stale step-1 `main.py` split ? re-cut fresh from `origin/master`).
105
106 #420's genuinely-unapplied residuals were carried into this reconcile PR: the
`yolo_hybrid.py`
107 ByteTrack-licensing docstring (R1-14 ? code uses the standalone Apache-2.0 `trackers`
package, not
108 "supervision's MIT ByteTrack"), the `DATA_IN_GCS.md` §5 gap-table self-contradiction
(metadata is
109 in-bucket per §7), and the `CODE_CLEANUP_AUDIT` §6-anchor + P10 currency (`main.py`
1448?2360, #390 stale).
110
111 ## 4. Execution design
112
113 ### Wave model
114
115 Each wave is a theme for scheduling; each row in section 7 is an independent PR. A later
wave can begin only when it does not conflict with active uncommitted work in the same repo.
116
117 - **Wave 0 ? tracking and truth sync:** this docs-only PR.
118 - **Wave 1 ? engine cost/correctness:** paid re-bill, remote-source egress, ffmpeg
timeouts, failed mypy fix.
119 - **Wave 2 ? engine resource durability:** temp scratch lifecycle, GDrive API
streaming/safe put, Cloud Run timeout handling, upload retention scheduling.
120 - **Wave 3 ? supply-chain and CI gates:** SHA pins, lock/constraints plan, obsreport CI,
sports-data-collector ruff/coverage, khelsutra E2E CUJ, workflow dedupe.
121 - **Wave 4 ? UX/UI resilience:** vendored SPA bundle, job resume/progress, upload
filename, demo-grid hiding, HTML 5xx handling, WhatsApp file share. This wave carries the
screencast requirement.
122 - **Wave 5 ? structural debt:** close/re-cut `#390`, continue `main.py` split, then
shim/cycle cleanup and database split only after behavior fixes settle.
123 - **Wave 6 ? issue hygiene and archival:** close/update stale issues, archive terminal
docs only after due diligence.
124
125 ### Verification policy
126
127 For every code PR:
128
129 - Run the repo's normal CI-equivalent checks locally when feasible, or cite the green CI
rollup and run only local checks that CI cannot cover, matching the repo's review policy.
130 - Preserve or raise coverage floors. Never lower a coverage floor without owner
approval.
131 - Install missing test dependencies if the suite otherwise fails to collect; record
unavoidable private/GPU/real-video skips.
132 - For engine PRs, default target is `python run_all_tests.py --cov=backend
--cov=training --cov-report=term --cov-fail-under=70`, `ruff check .`, and `mypy backend
training`, adjusted only for documented CI-policy exceptions.
133 - For `khelsutra/web` PRs, run typecheck, coverage, build, and any relevant Playwright
CUJ; create/validate screencast evidence for UI behavior.

```

134 - For visual/UI PRs, attach the screencast or screenshots in the PR body and store durable artifacts under the existing `khelsutra-screencast/` workflow when the repo's harness supports it.

135

136 ## 5. Risk table

137

138 | Risk | Where it bites | Mitigation |

139 |---|---|---|

140 | Shared checkout absorbs sibling changes | All repos | Fetch/branch from `origin/<base>`, re-verify branch + HEAD before staging, stage explicit paths. |

141 | Docs-only PR accidentally includes local WIP | Especially collector `.gitignore` | First PR touches engine docs only; later collector PR stages explicit paths and handles `.gitignore` deliberately. |

142 | Engine behavior fixes conflict with stale `#390` | `backend/main.py` | Land correctness/resource fixes first, then close/re-cut the split from fresh `origin/master`. |

143 | UI fixes regress layout or localized text | `khelsutra/web`, `site`, extension UI | Unit/e2e coverage plus Playwright screenshots/screencast validation. |

144 | Local cleanup looks durable but is machine-only | untracked debris / `.git` gc | Record local-only as local-only; add durable ignore/cleanup tests only when needed. |

145 | Owner-gated work gets blended into engineering PRs | Cloudflare, corpus, legal, launch | Keep gate rows marked `Gated? Owner`; PRs may document but not perform. |

146

147 ## 6. Honest limits

148

149 A green docs-only PR proves only that the project is tracked and links are valid. It does not fix runtime debt.

150

151 A green unit suite does not prove GPU, WSL, real-video, Cloudflare, Google Drive desktop, or GCS bucket behavior unless the PR explicitly runs those paths or records owner verification.

152

153 Screencasts prove rendered behavior for the captured viewport and flow; they do not replace automated tests. Any UI PR that fixes a bug must still add or update deterministic tests where feasible.

154

155 ## 7. Deliverables & progress tracker

156

157 Legend: Todo = not started; In progress = active branch/PR; Done = merged or locally completed as labeled; Blocked = owner/external. One small PR per row, no stacking.

158

159 | ID | Wave | Deliverable | Repo | Depends on | Gated? | Status | PR |

160 |----|-----|-----|-----|-----|-----|-----|----|

161 | P0 | 0 | Create this tracked project doc; index it in `docs/README.md`; add `DOC\_STATUS.md` row; add live `NEXT\_STEPS.md` pointer; add audit snapshot note. | engine | ? |

162 | P1 | 1 | Fix failed `R1-27` mypy issue in `backend/storage/gcs.py`; prove with full mypy gate where optional GCS dep is installed. | engine | P0 | No | Done | #423 |

163 | P2 | 1 | Fix `/api/process` idempotency for already-processed videos; add explicit force/reprocess path; close `#340` and likely `#330`. | engine | P0 | No | Done | #428 |

164 | P3 | 1 | Cache/reuse remote source material for `/api/source` and annotation proxy; stop per-Range full-object fetches. | engine | P0 | No | Done | #424 |

165 | P4 | 1 | Add timeouts to serving-path ffmpeg/ffprobe subprocesses and map timeout failures cleanly. | engine | P0 | No | Done | #425 |

166 | P5 | 2 | Delete scoped remote-input scratch dirs or move them under a swept app-home temp root; cover process/compile/assets/CLI/cloud marker reads. | engine | P3 | No | Done | #426 |

167 | P6 | 2 | Stream `GDriveApiStorage.fetch\_to\_local` and make overwrite safe via update/temp-create semantics. | engine | P0 | No | Done | #427 |

168 | P7 | 2 | Add best-effort Cloud Run execution cancellation or late-marker salvage on poll timeout. | engine | P0 | Real Cloud verification owner; fake-client PR not gated | Done | #417 |

169 | P8 | 2 | Package upload-retention scheduling docs/unit/timer wrapper for future hosted deployments. | engine and/or khelsutra deploy docs | P0 | Enabling on live infra owner-gated | Todo | ? |

170 | P9 | 3 | Pin `trackers` to immutable commit SHA and single-source/refactor duplicated

install literals. | engine | P0 | No | Todo | ? |

171 | P10 | 3 | Update engine `obsreport` dependency URL to `Khelsutra/` and immutable tag/commit convention. | engine | P0 | No | Todo | ? |

172 | P11 | 3 | Add minimal CI to `sports-obsreport` and fix `\_plural("match", 3)` customer text. | sports-obsreport | P0 | No | Todo | ? |

173 | P12 | 3 | Add `ruff` and coverage gate to `sports-data-collector`, fixing current ruff findings first. | sports-data-collector | P0 | No | Todo | ? |

174 | P13 | 3 | Resolve collector stale `.gitignore` artifact hunk deliberately: commit correct manifest-preserving pattern or discard after owner direction. | sports-data-collector | P0 | Minor owner direction | Todo | ? |

175 | P14 | 3 | Add `khelsutra/web` Playwright CUJ CI profile and mock/contract drift guard. | khelsutra | P0 | No | Todo | ? |

176 | P15 | 4 | Refresh engine `backend/ui/` bundle from current `khelsutra/web`; add staleness check or doctor warning. | engine + khelsutra source | P14 preferred | No | Todo | ? |

177 | P16 | 4 | Make SPA ingest jobs refresh-resumable via `?job=` / localStorage and heartbeat/elapsed progress. Include screencast validation. | khelsutra | P14 preferred | No | Todo | ? |

178 | P17 | 4 | Keep uploaded filename visible during upload and processing. Include localized tests and screencast if visible. | khelsutra | P14 preferred | No | Todo | ? |

179 | P18 | 4 | Hide/replace demo rally grid while a real upload/process job is running. Include screencast validation. | khelsutra | P16 or shared busy signal | No | Todo | ? |

180 | P19 | 4 | Handle HTML/proxy 5xx bodies without rendering raw markup; keep plain-text engine 502 details. | khelsutra | P0 | No | Todo | ? |

181 | P20 | 4 | Implement Web Share API file-share attempt for compiled reels with graceful WhatsApp fallback. Include mobile-capable validation notes. | khelsutra | P0 | No | Todo | ? |

182 | P21 | 4 | Fix stale SPA API comment anchors to route/function anchors instead of line numbers. | khelsutra | P0 | No | Todo | ? |

183 | P22 | 4 | Update rally-annotator remote URL to canonical org; add remaining reload/persistence E2E if not covered by `#27`. | rally-annotator | P0 | No | Todo | ? |

184 | P23 | 5 | Close stale/conflicting `#390`; re-cut first `main.py` orchestration split from fresh `origin/master`. | engine | P1-P8 settle | No | Todo | ? |

185 | P24 | 5 | Remove remaining `backend.main` shim cycles and lift mypy quarantine where type-clean. | engine | P23 | No | Todo | ? |

186 | P25 | 5 | Split `Database` behind facade by domain only when the migration/correctness wave is stable. | engine | P23 | No | Todo | ? |

187 | P26 | 6 | Update or close stale GitHub issues: `#97`, `#101`, `#103`, `#388`, `#175`, `#301`, related duplicates. | mixed | Relevant PRs merged | Owner issue disposition where needed | Todo | ? |

188 | P27 | 6 | Back up Roora pilot non-video artifacts to the corpus archive and update `DATA\_IN\_GCS.md`. | engine/non-git | P0 | Videos upload owner-gated; metadata archive not gated | Todo | ? |

189 | P28 | 6 | Verify/hash six owned golden source videos from `F:` and record durable MD5/path metadata; do not upload 38 GB without owner approval. | sports-data-collector/non-git | Owner mounts F: | Upload scope owner-gated | Blocked | ? |

190

191 ## 8. Open questions ? owner / external

192

193 1. For `sports-data-collector/.gitignore`, should model artifacts ever live in that repo, or should the WIP hunk be discarded because artifacts belong only in the engine repo?

194 2. For Roora pilot backup, approve metadata/CVAT CSV archive to GCS now? The plan treats this as low-cost/non-gated, but it still writes to the corpus bucket.

195 3. For the six owned source videos, should Phase 2 upload full 4K sources or only proxies once `F:` is mounted and hashes are recorded?

196 4. For upload-retention scheduling, should the default hosted wrapper be time-window-only, or should it skip files referenced by non-terminal job rows?

197 5. For SPA/UI PR evidence, should durable screencasts be checked into docs/artifacts, or kept in the existing non-git `khelsutra-screencast/` artifact sink with PR links?

198

199 ## 9. Definition of done

200

201 - [ ] All non-owner-gated P0/P1/P2/P3 audit findings either resolved, explicitly reclassified, or moved into a narrower tracked project.

202 - [ ] Every code repo has a credible local/CI quality gate for its size: tests, lint, type checking where appropriate, and coverage floor where feasible.

203 - [ ] Engine cost leaks and scratch leaks are fixed or guarded.

```

204 - [] Engine vendored SPA bundle is current or has a durable staleness signal.
205 - [] SPA processing UX survives refresh and gives testers visible job/file state.
206 - [] UI-visible PRs include validated visual artifacts and deterministic tests where
feasible.
207 - [] Stale deployment docs/issues no longer direct future sessions at retired
infrastructure.
208 - [] Owner-gated items remain clearly labeled and have no accidental code/data
mutation.
209 - [] This doc's section 7 rows are updated with merged PR numbers.
210 - [] `Status` flips to `DONE`, inbound references are updated, and the doc is archived
per `DOC_STATUS.md` section 2.

236 ### Changelog
237
238 - `2026-07-02` ? Created from the multi-repo audit and post-sync reconciliation; added
completed-item ledger, pushback, wave plan, verification policy, and screencast requirement.
239 - `2026-07-02` ? **Wave 2 P6/P7 merged + audit-batch PR dispositions.** Took over and
merged **416** (P6 ? GDrive stream/safe-put, R1-18) and **417** (P7 ? Cloud Run poll-timeout
salvage, R1-21) after refreshing both onto current master and re-running CI green. Closed the
superseded early-batch PRs **414/#415/#418/#419** (already on master via #421/#422/#425) and
420 (4/7 files superseded by #421/#423). Carried #420's still-unapplied residuals here:
`yolo_hybrid.py` ByteTrack-licensing docstring (R1-14), `DATA_IN_GCS.md` $5 gap-table
reconciliation, and `CODE_CLEANUP_AUDIT` $6-anchor + P10 currency (`main.py` 1448?2360, #390
stale). Refreshed the R1-01 line count. No runtime code change (the only non-doc edit is a
docstring).
240

```

#### 155. assistant (2026-07-02T08:49:27.238Z)

I have the full current health plan. Now I'll build the consolidation. Let me write the append block (the folded live tracker + prior-audits summary + changelog) that gets appended to the umbrella.

#### 156. assistant (2026-07-02T08:51:01.737Z)

---

Remediation tracker (live)

> Folded in from the former standalone `KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN.md` (archived 2026-07-02 ? `docs/archives/past\_projects/KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN-FOLDED-2026-07-02.md`). This is the **\*\*source of truth for completed/open items\*\***; the findings above are the point-in-time snapshot. One small PR per tracker row, no stacking.

Decisions locked

#	Decision	Source / date	Implication
---	---	---	---
D1	Work from `C:\Users\avidu\Projects\khelsutra-guru` as the multi-repo root.   Owner directive in synced memory, 2026-06-29.   Touch each sub-repo separately; pull/fetch before reading or branching.		
D2	One small PR per coherent work item; no PR stacking.   `CLAUDE.md` + synced memory working agreements.   Waves below are sequencing groups, not giant branches.		
D3	Branch from the remote default branch explicitly.   Global git safety rule.   Use `git fetch origin` then `git checkout -b <branch> origin/<base>` for every repo.		
D4	Stage explicit paths only.   Shared-checkout incident record.   Never use `git add -A`, `.` , or `-u` in this workspace.		
D5	Coverage and CI gates must not regress.   Owner pre-LGTM rule + repo CI contracts.   Every code PR records which full/CI-equivalent checks ran, current floor, and any unavoidable skip.		
D6	SPA/UI changes require visual proof.   Owner request, 2026-07-02.   Any `khelsutra/web`, `site`, or extension UI PR must include validated Playwright screenshots/screencast evidence, stored under the existing workspace `khelsutra-screencast/` convention when applicable.		
D7	Owner-gated work is tracked, not executed.   Repo guardrails.   Cloudflare dashboard cleanup, launch signoff, legal/licensing, corpus promotion, and large media upload decisions remain explicit owner gates.		
D8	First remediation PR was docs-only.   Owner request, 2026-07-02.   The plan bootstrap (#423), index/register updates, and audit-status notes landed before code waves.		

Status ledger (post-sync)

All five git repos were fast-forwarded to origin head on 2026-07-02 (heads at plan bootstrap; the engine has since advanced past `#416/#417/#429`):

Repo	Head at bootstrap	Working tree	Notes
---	---	---	---
`badminton-highlight-indexer`	`4f148d1`	clean before branch	Audit report tracked; doc truth-sync + config fixes landed.
`khelsutra`	`41c9627`	clean	Retired-droplet docs updated.
`rally-annotator`	`ef97739`	clean	DOM-scan and locale-persistence fixes landed.
`sports-data-collector`	`9ce5a20`	dirty `.gitignore` hunk pre-exists	Nested stale clone gone; `obsreport` dependency-confusion fix landed.
`sports-obsreport`	`1f72c1c` / tag `v0.1.3`	clean	Still has no CI.

Already completed after the audit snapshot:

Audit item	Status	Evidence
---	---	---
`R2-5` engine `CLAUDE.md` stale state	Done	Engine PR `#421`, `d80aa02`.
`R1-13` engine `BACKLOG.md` shipped items stale	Done	Engine PR `#421`, `d80aa02`.
`R1-14` engine `DOC_STATUS` / docs index stale	Done	Engine PR `#421` + `#429`; docstring/anchor residuals cleared.
`R1-19` `output.output_dir` clobbered	Done	Engine PR `#422`, `4f148d1`.
`R1-20` `upload_dir` CWD-relative	Done	Engine PR `#422`, `4f148d1`.
`R1-06`, `R1-09`, `R1-36` retired-droplet docs	Done	Khelsutra PR `#142`, `41c9627`.
`R2-1` rally-annotator hidden panel scans DOM	Done	Rally-annotator PR `#27`, `ef97739`.
`R2-2` rally-annotator locale persistence	Done	Rally-annotator PR `#27`, `ef97739`.
`R2-3` collector `obsreport`>=0.1.3` dependency confusion	Done	Sports-data-collector PR `#57`, `9ce5a20`.

```
| `R1-10` stale nested collector clone | Locally resolved | Directory absent after sync/cleanup;
not a durable repo change. |
| Critic addition: engine `.git` loose video blobs | Locally resolved | `git count-objects -vH`
shows packed repo ~11 MiB, no garbage. |
| Critic addition: stale yt-dlp partial debris | Locally resolved | `data/videos` has no
`*.part`/`*.ytdl` debris in this checkout. |
```

Pushback / reclassification:

```
| Audit item | Revised status | Reason |
|---|---|---|
| `R1-27` misplaced type-ignore in `gcs.py` | **Done** | Fixed in `#428` (`d00b4db`); `mypy`
backend training` clean with `google-cloud-storage` installed. |
| `R2-8` upload retention scheduling | Still open, downgraded premise | Scheduling is missing,
but the "live droplet accepting uploads" premise is stale after droplet retirement. Treat as
hosted-deployment readiness (tracker P8), not an active droplet incident. |
| `R1-01` main.py line count | Still open, number changed | `backend/main.py` is now **2360
lines** (was ~1965 at plan bootstrap; the Wave-1 endpoint/fix PRs since land here), still large;
`backend/orchestration.py` absent; PR `#390` remains open/stale (tracker P23 ? re-cut fresh from
`origin/master`). |
| Audit itself | Snapshot | Verified against pre-sync SHAs; this tracker is the live status. |
```

Newly noted while reconciling:

- Engine `pyproject.toml` / `requirements.txt` still reference `avidullu/sports-obsreport` via redirect and a mutable tag (tracker P9/P10).
- `rally-annotator` local remote still points at `avidullu/rally-annotator.git`; code sync works via redirect, but it is stale hygiene (tracker P22).

#### Audit-batch PR dispositions (2026-07-02)

The audit surfaced an early batch of one-per-finding PRs (**\*\*#414?#420\*\***, opened ~04:5x) that a later session then re-implemented **\*\*fresh\*\*** as the Wave-1/2 PRs. After a per-PR review (independent analysis + adversarial verification against `master`, both high-confidence), their fate was decided:

```
| PR | Finding | Fate | Reason |
|----|-----|-----|-----|
| #416 | R1-18 GDrive stream / safe-put | **Merged** (P6) | Not superseded ? `gdrive_api.py`
still whole-file-buffered + deleted-before-create on master; refreshed onto master, CI green,
taken over. |
| #417 | R1-21 Cloud Run poll-timeout salvage | **Merged** (P7) | Not superseded ?
`cloud_run.py` still let `PolicyTimeout` propagate with no cancel; refreshed onto master, CI
green, taken over. |
| #414 | R2-5 `CLAUDE.md` truth-sync | Closed ? superseded by #421 | master already truth-
synced. |
| #415 | R1-20 `upload_dir` app-home | Closed ? superseded by #422 | master already routes
`upload_dir` through `resolve_output_dir`. |
| #418 | R1-03 `/api/source` cache | Closed ? superseded by #425 (P3) | master already fetch-
once + `source_cache`. |
| #419 | R1-19 `--output-dir` clobber | Closed ? superseded by #422 | master already defaults
`--output-dir` None + honors config. |
| #420 | R1-13/14 docs reconcile | Closed ? 4/7 files superseded by #421/#423; 3 residuals
carried into #429 | yolo_hybrid docstring + DATA_IN_GCS $5 + CODE_CLEANUP $6/P10. |
```

**\*\*#390** is out of scope (owner excluded it) and left open; it is tracked as P23 (stale step-1 `main.py` split ? re-cut fresh from `origin/master`).

## Execution design ? wave model

Each wave is a theme for scheduling; each tracker row is an independent PR. A later wave can begin only when it does not conflict with active uncommitted work in the same repo.

- **\*\*Wave 0 ? tracking and truth sync:\*\*** the docs-only bootstrap PR (#423) + this consolidation.
- **\*\*Wave 1 ? engine cost/correctness:\*\*** paid re-bill, remote-source egress, ffmpeg timeouts,

failed mypy fix. ? complete (P1?P4).

- **Wave 2 ? engine resource durability:** temp scratch lifecycle, GDrive API streaming/safe put, Cloud Run timeout handling, upload retention scheduling. (P5?P7 done; P8 open.)
- **Wave 3 ? supply-chain and CI gates:** SHA pins, lock/constraints plan, obsreport CI, sports-data-collector ruff/coverage, khelsutra E2E CUJ, workflow dedupe.
- **Wave 4 ? UX/UI resilience:** vendored SPA bundle, job resume/progress, upload filename, demo-grid hiding, HTML 5xx handling, WhatsApp file share. This wave carries the screencast requirement.
- **Wave 5 ? structural debt:** close/re-cut `#390`, continue `main.py` split, then shim/cycle cleanup and database split only after behavior fixes settle. (Absorbs the prior audit's D1/P10.)
- **Wave 6 ? issue hygiene and archival:** close/update stale issues, archive terminal docs only after due diligence.

## Verification policy

For every code PR:

- Run the repo's normal CI-equivalent checks locally when feasible, or cite the green CI rollup and run only local checks that CI cannot cover, matching the repo's review policy.
- Preserve or raise coverage floors. Never lower a coverage floor without owner approval.
- Install missing test dependencies if the suite otherwise fails to collect; record unavoidable private/GPU/real-video skips.
- For engine PRs, default target is `python run\_all\_tests.py --cov=backend --cov=training --cov-report=term --cov-fail-under=70`, `ruff check .`, and `mypy backend training`, adjusted only for documented CI-policy exceptions.
- For `khelsutra/web` PRs, run typecheck, coverage, build, and any relevant Playwright CUJ; create/validate screencast evidence for UI behavior.
- For visual/UI PRs, attach the screencast or screenshots in the PR body and store durable artifacts under the existing `khelsutra-screencast/` workflow when the repo's harness supports it.

## Risk table

Risk	Where it bites	Mitigation
Shared checkout absorbs sibling changes	All repos	Fetch/branch from `origin/<base>`, re-verify branch + HEAD before staging, stage explicit paths.
Docs-only PR accidentally includes local WIP	Especially collector `.gitignore`	Docs PRs touch docs only; the collector PR stages explicit paths and handles `.gitignore` deliberately.
Engine behavior fixes conflict with stale `#390`	`backend/main.py`	Land correctness/resource fixes first, then close/re-cut the split from fresh `origin/master`.
UI fixes regress layout or localized text	`khelsutra/web`, `site`, extension UI	Unit/e2e coverage plus Playwright screenshots/screencast validation.
Local cleanup looks durable but is machine-only	untracked debris / `.git` gc	Record local-only as local-only; add durable ignore/cleanup tests only when needed.
Owner-gated work gets blended into engineering PRs	Cloudflare, corpus, legal, launch	Keep gate rows marked `Gated? Owner`; PRs may document but not perform.

## Honest limits

A green docs-only PR proves only that the project is tracked and links are valid. It does not fix runtime debt.

A green unit suite does not prove GPU, WSL, real-video, Cloudflare, Google Drive desktop, or GCS bucket behavior unless the PR explicitly runs those paths or records owner verification.

Screencasts prove rendered behavior for the captured viewport and flow; they do not replace automated tests. Any UI PR that fixes a bug must still add or update deterministic tests where feasible.

## Deliverables & progress tracker ? **source of truth**

Legend: Todo = not started; In progress = active branch/PR; Done = merged or locally completed as labeled; Blocked = owner/external. One small PR per row, no stacking.

ID	Wave	Deliverable	Repo	Depends on	Gated?	Status	PR
P0	0	Create the tracked project doc; index it in `docs/README.md`; add `DOC_STATUS.md` row; add live `NEXT_STEPS.md` pointer; add audit snapshot note.	engine	?	No	Done	#423
P1	1	Fix failed `R1-27` mypy issue in `backend/storage/gcs.py`; prove with full mypy gate where optional GCS dep is installed.	engine	P0	No	Done	#428
P2	1	Fix `/api/process` idempotency for already-processed videos; add explicit force/reprocess path; close `#340` and likely `#330`.	engine	P0	No	Done	#424
P3	1	Cache/reuse remote source material for `/api/source` and annotation proxy; stop per-Range full-object fetches.	engine	P0	No	Done	#425
P4	1	Add timeouts to serving-path ffmpeg/ffprobe subprocesses and map timeout failures cleanly.	engine	P0	No	Done	#426
P5	2	Delete scoped remote-input scratch dirs or move them under a swept app-home temp root; cover process/compile/assets/CLI/cloud marker reads.	engine	P3	No	Done	#427
P6	2	Stream `GDriveApiStorage.fetch_to_local` and make overwrite safe via update/temp-create semantics.	engine	P0	No	Done	#416
P7	2	Add best-effort Cloud Run execution cancellation or late-marker salvage on poll timeout.	engine	P0	Real Cloud verification owner; fake-client PR not gated	Done	#417
P8	2	Package upload-retention scheduling docs/unit/timer wrapper for future hosted deployments.	engine and/or khelsutra deploy docs	P0	Enabling on live infra owner-gated	Todo	?
P9	3	Pin `trackers` to immutable commit SHA and single-source/refactor duplicated install literals.	engine	P0	No	Todo	?
P10	3	Update engine `obsreport` dependency URL to `Khelsutra/` and immutable tag/commit convention.	engine	P0	No	Todo	?
P11	3	Add minimal CI to `sports-obsreport` and fix `_plural("match", 3)` customer text.	sports-obsreport	P0	No	Todo	?
P12	3	Add `ruff` and coverage gate to `sports-data-collector`, fixing current ruff findings first.	sports-data-collector	P0	No	Todo	?
P13	3	Resolve collector stale `.gitignore` artifact hunk deliberately: commit correct manifest-preserving pattern or discard after owner direction.	sports-data-collector	P0	Minor owner direction	Todo	?
P14	3	Add `khelsutra/web` Playwright CUJ CI profile and mock/contract drift guard.	khelsutra	P0	No	Todo	?
P15	4	Refresh engine `backend/ui/` bundle from current `khelsutra/web`; add staleness check or doctor warning.	engine + khelsutra source	P14 preferred	No	Todo	?
P16	4	Make SPA ingest jobs refresh-resumable via `?job=` / localStorage and heartbeat/elapsed progress. Include screencast validation.	khelsutra	P14 preferred	No	Todo	?
P17	4	Keep uploaded filename visible during upload and processing. Include localized tests and screencast if visible.	khelsutra	P14 preferred	No	Todo	?
P18	4	Hide/replace demo rally grid while a real upload/process job is running. Include screencast validation.	khelsutra	P16 or shared busy signal	No	Todo	?
P19	4	Handle HTML/proxy 5xx bodies without rendering raw markup; keep plain-text engine 502 details.	khelsutra	P0	No	Todo	?
P20	4	Implement Web Share API file-share attempt for compiled reels with graceful WhatsApp fallback. Include mobile-capable validation notes.	khelsutra	P0	No	Todo	?
P21	4	Fix stale SPA API comment anchors to route/function anchors instead of line numbers.	khelsutra	P0	No	Todo	?
P22	4	Update rally-annotator remote URL to canonical org; add remaining reload/persistence E2E if not covered by `#27`.	rally-annotator	P0	No	Todo	?
P23	5	Close stale/conflicting `#390`; re-cut first `main.py` orchestration split from fresh `origin/master`. (Absorbs prior audit CODE_CLEANUP `P10` / `D1`.)	engine	P1-P8 settle	No	Todo	?
P24	5	Remove remaining `backend.main` shim cycles and lift mypy quarantine where type-clean.	engine	P23	No	Todo	?
P25	5	Split `Database` behind facade by domain only when the migration/correctness wave is stable.	engine	P23	No	Todo	?
P26	6	Update or close stale GitHub issues: `#97`, `#101`, `#103`, `#388`, `#175`, `#301`, related duplicates.	mixed	Relevant PRs merged	Owner issue disposition where needed	Todo	?
P27	6	Back up Roora pilot non-video artifacts to the corpus archive and update `DATA_IN_GCS.md`.	engine/non-git	P0	Videos upload owner-gated; metadata archive not gated	Todo	?

| P28 | 6 | Verify/hash six owned golden source videos from `F:` and record durable MD5/path metadata; do not upload 38 GB without owner approval. | sports-data-collector/non-git | Owner mounts F: | Upload scope owner-gated | Blocked | ? |

## Open questions ? owner / external

1. For `sports-data-collector/.gitignore`, should model artifacts ever live in that repo, or should the WIP hunk be discarded because artifacts belong only in the engine repo?
2. For Roora pilot backup, approve metadata/CVAT CSV archive to GCS now? The plan treats this as low-cost/non-gated, but it still writes to the corpus bucket.
3. For the six owned source videos, should Phase 2 upload full 4K sources or only proxies once `F:` is mounted and hashes are recorded?
4. For upload-retention scheduling, should the default hosted wrapper be time-window-only, or should it skip files referenced by non-terminal job rows?
5. For SPA/UI PR evidence, should durable screencasts be checked into docs/artifacts, or kept in the existing non-git `khelsutra-screencast/` artifact sink with PR links?

## Definition of done

- [ ] All non-owner-gated P0/P1/P2/P3 audit findings either resolved, explicitly reclassified, or moved into a narrower tracked project.
- [ ] Every code repo has a credible local/CI quality gate for its size: tests, lint, type checking where appropriate, and coverage floor where feasible.
- [x] Engine cost leaks and scratch leaks are fixed or guarded (P2?P7).
- [ ] Engine vendored SPA bundle is current or has a durable staleness signal.
- [ ] SPA processing UX survives refresh and gives testers visible job/file state.
- [ ] UI-visible PRs include validated visual artifacts and deterministic tests where feasible.
- [ ] Stale deployment docs/issues no longer direct future sessions at retired infrastructure.
- [ ] Owner-gated items remain clearly labeled and have no accidental code/data mutation.
- [x] This tracker's rows are kept current with merged PR numbers.
- [ ] When the waves complete, flip this umbrella `Status ? DONE`, update inbound references, and archive per `DOC\_STATUS.md` §2.

## Prior audits (absorbed)

Earlier engine audits were folded into this umbrella and archived (full detail retained for lineage):

### CODE\_CLEANUP\_AUDIT ? 2026-06-24 deep audit (archived)

The 2026-06-24 whole-repo engine audit surfaced **\*\*35 items\*\*** (33 fresh + 2 absorbed from `BACKLOG.md`). **\*\*Phase 1 COMPLETE\*\*** ? 14 structural refactorings (typed-config migration, `create\_app()` app-factory, no-op segmenter-validator fix, deep config merge, quick wins) shipped in `#352`?`#371`. **\*\*Phase 2 largely shipped\*\*** ? Gemini provider error contract (`#373`?`#378`), fabricated-data removal from the motion segmenter (`#385`), Gemini remote-file GC (`#380`), `sv.ByteTrack` ? standalone `trackers` package (`#386`), config/type fixes. **\*\*Remaining:\*\*** the `main.py` god-module split (its `P10`/`D1`) ? step-1 PR `#390` is stale/CONFLICTING and is re-cut under this umbrella's tracker **\*\*P23\*\*** (`main.py` is now 2360 lines) ? plus its Phase-3 pool (B4/B7/B8/D5/D6/D8?D10/D14/O3/O4). Full register + its §6 tracker: `docs/archives/past\_projects/CODE\_CLEANUP\_AUDIT\_2026-06-24-SUPERSEDED-2026-07-02.md`.

### June-2026 test-hardening sweep (archived)

The 2026-06-14 `CODE\_AUDIT\_AND\_TEST\_HARDENING` sweep (T1?T5 + the full hardening loop + verification per `#162`) and its `DEFERRED\_HARDENING\_PLAN` / `HARDENING\_LOOP\_HANDOFF` companions are **\*\*COMPLETE\*\***. Their former top-level pointer-stubs were removed on 2026-07-02 (resolving `DOC\_STATUS.md` §4 finding #4); full records live in `docs/archives/`:

```
[`CODE_AUDIT_AND_TEST_HARDENING-COMPLETED-2026-06-14.md`](archives/CODE_AUDIT_AND_TEST_HARDENING-COMPLETED-2026-06-14.md),
[`DEFERRED_HARDENING_PLAN-COMPLETED-2026-06-14.md`](archives/DEFERRED_HARDENING_PLAN-COMPLETED-2026-06-14.md),
[`HARDENING_LOOP_HANDOFF-COMPLETED-2026-06-14.md`](archives/HARDENING_LOOP_HANDOFF-COMPLETED-2026-06-14.md). The async-job-model design item (`DEFERRED_HARDENING_PLAN` #16) shipped as `EXECUTION_POLICY.md` P1.
```

## Changelog

- `2026-07-02` ? **\*\*Umbrella consolidation.\*\*** Made this the single living code-audit doc: folded in the standalone `KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN.md` as the **\*Remediation tracker (live)\*** section (archived the standalone plan), absorbed the prior `CODE_CLEANUP_AUDIT_2026-06-24`` (archived) and the already-archived June-2026 hardening sweep into **\*Prior audits (absorbed)\***, removed the three redundant top-level hardening pointer-stubs (`DOC_STATUS $4` finding #4 resolved), and repointed inbound links. Findings section unchanged.
- `2026-07-02` ? **\*\*Wave 2 P6/P7 merged + audit-batch PR dispositions.\*\*** Took over and merged `#416`` (P6 ? GDrive stream/safe-put, R1-18) and `#417`` (P7 ? Cloud Run poll-timeout salvage, R1-21) after refreshing both onto current master and re-running CI green. Closed the superseded early-batch PRs `#414/#415/#418/#419`` (already on master via `#421/#422/#425`) and `#420`` (4/7 files superseded by `#421/#423`; residuals carried in `#429`).
- `2026-07-02` ? **\*\*Wave 1 complete (P1?P4) + P5.\*\*** `#428`` (gcs mpy, R1-27), `#424`` (`/api/process`` idempotency, `#340/#330`), `#425`` (`/api/source`` cache), `#426`` (ffmpeg timeouts), `#427`` (scratch retention).
- `2026-07-02` ? Plan created from the multi-repo audit and post-sync reconciliation (`#423``); added completed-item ledger, pushback, wave plan, verification policy, and screencast requirement.

### 157. user (2026-07-02T08:51:01.774Z)

File created successfully at: C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\append-block.md (file state is current in your context ? no need to Read it back)

### 158. assistant (2026-07-02T08:51:12.116Z)

Append block ready. Now let me rewrite the umbrella header to declare it the living umbrella, and find any in-body prose references to the folded docs that also need repointing.

### 159. user (2026-07-02T08:51:19.213Z)

### 161. assistant (2026-07-02T08:51:49.984Z)

The umbrella has ~7 in-body prose references to `docs/CODE_CLEANUP_AUDIT_2026-06-24.md`` (not links, so they won't fail link-check, but they'd become dead paths). I'll repoint them to the

archived path. Let me do that replace, then append the block.

#### 162. user (2026-07-02T08:51:51.920Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md has been updated. All occurrences were successfully replaced. (file state is current in your context ? no need to Read it back)

#### 163. assistant (2026-07-02T08:52:08.873Z)

Now the file operations: append the block to the umbrella, `git mv` the two folded docs to archives, and `git rm` the three redundant stubs.

#### 164. user (2026-07-02T08:52:15.262Z)

```
=== append folded tracker + prior-audits + changelog to umbrella ===
```

```
807 docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md
```

```
=== git mv the two folded docs into archives/past_projects/ ===
```

```
=== git rm the three redundant hardening pointer-stubs (full content already archived) ===
```

```
rm 'docs/CODE_AUDIT_AND_TEST_HARDENING.md'
```

```
rm 'docs/DEFERRED_HARDENING_PLAN.md'
```

```
rm 'docs/HARDENING_LOOP_HANDOFF.md'
```

```
=== status ===
```

```

6 # Code Cleanup ? 2026-06-24 Deep Audit Remediation
7
8 > **Status:** `PHASE 1 COMPLETE` + **Phase 2 largely shipped** (P8/P9/P11?P15/P17
merged; remaining = **P10** `main.py` split + Phase-3 P16+) . **Owner:** Avi . **Created:**
2026-06-24 . **Last updated:** 2026-07-02 (P10 currency + $6 anchor fix ? see Changelog)
9 > **Lifecycle:** `DRAFT ? IN PROGRESS ? DONE ? archived` (move to
`docs/archives/past_projects/` when DONE)
10 > **Tracking anchors:** $6 progress tracker is the source of truth; indexed in
`docs/README.md`.
11 > **Relation to existing docs:** Sibling of `docs/CODE_AUDIT_AND_TEST_HARDENING.md` (the
2026-06-10 hardening sweep).
```

#### 167. user (2026-07-02T08:52:30.865Z)

```
1 # khelsutra-guru health remediation plan
```

```
2
3 > **Status:** `IN PROGRESS` ? Wave 1 complete; Wave 2 P5?P7 merged (P8 remaining) .
Owner: Avi . **Created:** `2026-07-02` . **Last updated:** `2026-07-02` (P6/P7 merged +
audit-batch PR dispositions)
4 > **Lifecycle:** `DRAFT -> IN PROGRESS -> DONE -> archived` (move to `docs/archives/`
when DONE)
```

#### 168. user (2026-07-02T08:52:47.727Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\archives\past\_projects\CODE\_CLEANUP\_AUDIT\_2026-06-24-SUPERSEDED-2026-07-02.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 169. user (2026-07-02T08:52:52.078Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\archives\past\_projects\KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN-FOLDED-2026-07-02.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 170. assistant (2026-07-02T08:53:12.850Z)

Banners added. Now the reference updates. README needs care ? the umbrella is now a *\*living\** doc so it shouldn't sit under "Historical documents," while the three folded/archived entries there must be repointed. Let me read the full README to place things correctly.

#### 171. user (2026-07-02T08:53:13.867Z)

```
1 - RALLY_QUALITY_RESEARCH.md ? *** Foundation doc** for
closing the local-vs-Gemini rally-detection gap: the measured gap + the code-grounded over-merge
diagnosis ("shuttle moving ? rally"), an inventory of the eval/experiment harness + its gaps,
the strengthened evaluation framework (segmental Edit/F1@k that make over-segmentation first-
class, golden-corpus + active learning, Gemini-agreement as a *shadow* signal), an
adversarially-verified, cited external-research synthesis (TAL/TAS boundary heads, racket-
sports rally-state cues, small-data, eval rigor), a **prioritized cheap?durable roadmap with
falsifiable success criteria**, and (§7) a **tracked project plan** ? work-item checklist,
sequencing, the single quality **number** attributed to the effort, and a **definition of done**
(project completes when all tiers land + the number is recorded). The plan that the
QUALITY_ITERATIONS.md log executes against; ties together
EXPERIMENT_HARNESS / MULTI_SIGNAL_FUSION_PLAN / ANALYZERS_AND_RECONCILERS /
OWNED_MODEL_IMPLEMENTATION_PLAN.
2 - RALLY_DETECTION_GAP_CLOSURE.md ? **Tracked execution
doc (2026-06-18)** for closing the remaining rally-detection accuracy gap **per video, before
launch**, driven by the growing golden corpus. First ground-truth clip (GX010141) reframed it:
boundaries are tight (R2/R3/R4 holds) ? the gap is **detection**: (G1) recall (local & Gemini
both miss ~half on hard clips, and *different* rallies ? complementary), (G2) precision (local
over-fires), (G3) **rally-END over-extension on the quick-return-after-point** (shuttle still
moving ? needs a *player-state* signal). Levers (owner-gated): player-kinematics + shuttle-in-
hand / sustained-invisibility end-rule with reverse-timeline backtrack, `rally_gate` Gate A
wiring, complementary fusion. **Peer** of `RALLY_QUALITY_RESEARCH.md` (execution tracker, not
research); §7 is the source of truth.
3 - PROMINENT_COURT_DETECTION.md ? **Design + experiment
(2026-06-19, default-OFF, owner-gated flip)** for the **multicourt G2 over-fire**: identify the
prominent (foreground) court (the one covering the majority of the frame) and keep only
rallies whose shuttle lives inside it ? re-defining the shuttle signal `(x,y,visible)` ?
`(x,y,visible-AND-inside-prominent-court)` *before* windowing, so a background/adjacent-court
shuttle never forms a rally. 2D floor polygon (MVP) ? **pseudo-3D play-volume** (refinement, so
high clears aren't clipped). Born from the GX010142 rally-#1 background-court FP; reuses
`fusion_features.point_in_polygon` + `FusionConfig.court_polygon`. §8 progress tracker is the
source of truth.
4 - RALLY_DETECTION_QUALITY_REPORT.md ? **Technical-
paper checkpoint (2026-06-17)** of rally-detection quality: the honest measured state (over-
segmentation milestone tolerance-F1 0.091?0.323 at n=11, p=0.002; merge-rate 0.694?0.150; first
```

real-footage ground-truth at-par with START at Gemini parity), the task-faithful R2 metric, a detailed Gemini comparison, next steps + expected wins, areas yet to be explored, and a publishability / path-to-submission verdict. Renders to a polished PDF; the externally-shareable "toward a paper" summary of `RALLY\_QUALITY\_RESEARCH.md` + `QUALITY\_ITERATIONS.md`.

5 - [EVALUATION.md](EVALUATION.md) ? How we measure and improve quality.

6 - [EXPERIMENT\_HARNESS.md](EXPERIMENT\_HARNESS.md) ? Design (P1 SHIPPED) for A/B + shadow + SxS experimentation on rally-detection variants with **zero production regression** ? experiments are decoupled from deploy (new cues default OFF, promote only on measured LOVO lift, rollback = flip a flag). Composes the existing `backend/eval/` machinery (`calibration`, `regression`, `metrics`); implemented in `backend/eval/experiment.py`.

7 - [QUALITY\_ITERATIONS.md](QUALITY\_ITERATIONS.md) ? **Living log** of rally-detection quality iterations (hypothesis ? what shipped ? measured/expected effect ? lesson). The reverse-chronological record; terminal-state snapshots get archived under `archives/quality-iterations/`.

8 - [ANALYZERS\_AND\_RECONCILERS.md](ANALYZERS\_AND\_RECONCILERS.md) ? Design (owner-gated, NOT started): a **signal-fusion framework** for rally detection ? producers emit confidence-scored **signals** at three temporal **scopes** (frame detectors / window analyzers / session analyzers), a learned **scorer** weights them, and an auditable **report-first reconciliation** pass lints the decision against the evidence. The spine: **no special-casing** in the decision path (signals?scorer, never `if/else`). Worked examples: a service-fault analyzer, a warm-up/practice span detector, and consuming a per-frame shuttle-state detector. A peer to `EXPERIMENT\_HARNESS.md` and `MULTI\_SIGNAL\_FUSION\_PLAN.md` (ADR-007 modular rally layer).

9 - [PERSONALIZATION\_PLAN.md](PERSONALIZATION\_PLAN.md) ? Design (owner-adopted **hybrid**; Phase-0 landing) for the **per-user personalization** feature on a generalization-first baseline: a thin per-user **tuning** layer gated by the honest small-N statistics (a **min-N promotion floor** + a **structural-guard exemption**, never a service gate) + a **contribution flywheel** (free-tier videos pool into the owner-trained baseline; "a tool that gets better the more you help it"). Records the **locked owner decisions** (identity, storage, `min\_n` semantics, Gate-A default, free-tier pooling). Built so far: per-user promotion gate (#141) + held-out-USER learning curve (#142).

10

11 - [GOLDEN\_REGRESSION\_FIXTURES.md](GOLDEN\_REGRESSION\_FIXTURES.md) ? **Design** (owner-gated, NOT started): **video-free, non-attributable regression fixtures** so a clean clone runs the rally-seg suite with **no video/GPU/DB**. Two layers ? the post-detector freeze + **dual gates** (characterization + quality-floor) reusing the `backend/eval/` stack, and the **SEALED-FIXTURES** privacy filter (de-attribution-at-source, tiered public/key-gated, shuttle-only public tier). Carries a cited **IN/US/EU legal memo** (derived-data IP/privacy), a threat model, and a **\$7 progress tracker + definition-of-done**. Extends [GOLDEN\_DATA\_SHARING.md](data\_pipeline/GOLDEN\_DATA\_SHARING.md).

12

13 **## ? Documentation status & governance**

14 - [DOC\_STATUS.md](DOC\_STATUS.md) ? **living Documentation Status & Archival Register**: every foundational/tracked doc's lifecycle + archive-readiness, the **archival due-diligence checklist** (**honestly update ? then archive**), and the open doc-hygiene findings. Review here; update rows as docs complete.

15

16 **## Product / platform plans**

17 - [COMPUTE\_DECOUPLED\_SERVING/](COMPUTE\_DECOUPLED\_SERVING/README.md) ? **Active tracked project** (2026-06-21, `DRAFT` owner-gated): **the productionization successor to DECOUPLED\_COMPUTE** (its deferred M3/M4). **One pure core** (DETECT?WINDOW?STITCH) that never branches on deployment profile, with a **ComputeBackend** (where it runs) + **StorageBackend** (what bytes) selected by **one startup config**. Ships **truly-local** (local/USB + local GPU, in-process stitch, zero cloud) + **cloud-serving** (upload<2GB / gdrive / bucket ? a **Cloud Run** GPU job runs detect AND stitch, metered into a per-job cost ledger) + **cpu-mock** (CI). Includes [TESTING\_STRATEGY.md](COMPUTE\_DECOUPLED\_SERVING/TESTING\_STRATEGY.md) (profile-PARITY proof for \$0), [architecture.svg](COMPUTE\_DECOUPLED\_SERVING/architecture.svg), a [runlogs/](COMPUTE\_DECOUPLED\_SERVING/runlogs/) posterity dir, and **ADR-014** ([lineage ADR-009?010?011?012?013?014](archives/decisions/DECISIONS.md)). \$7 M0?M10 tracker is the source of truth.

18 - [DECOUPLED\_COMPUTE/](archives/past\_projects/DECOUPLED\_COMPUTE/README.md) ? **DELIVERED + ARCHIVED** (2026-06-21). **Lifted the rally pipeline** onto a **rented cloud-native GPU** doing bucket-driven **train** + **infer**: storage/compute seams (PRs #246?#259) + the **M3.5 native WASB runner**; **M0?M2 + M3.5 proven** on a GCP L4 (M2 ? **weights/0.1.0-l4/**). Delivered on **GCP** ? DigitalOcean dropped for compute ([ADR-013](archives/decisions/DECISIONS.md)). **M3/M4** (serving endpoint + per-video billing + scale-to-zero) deferred ? the "Cloud Run + GPU

serving" subproject\*\* ([ADR-012](archives/decisions/DECISIONS.md)). Snapshot under  
`docs/archives/past\_projects/DECOUPLED\_COMPUTE/` (incl. `DEPLOY\_REPORT\_GCP\_2026-06-20.md`).

19 - [PACKAGING\_PLAN.md](PACKAGING\_PLAN.md) ? \*\*? Active tracked project (`IN PROGRESS`, 11  
PRs merged 2026-06-21/22):\*\* ship the engine as a \*\*downloadable batteries-included Python app\*\*  
? `pip install` ? `indexer --app` boots a local webserver and opens the \*\*bundled KhelSutra  
SPA\*\* single-origin, \*\*torch-free\*\* (LIGHT tier), cross-platform, no native component (decision  
D10/O1). Built ON the decoupled-compute seam. \*\*Supersedes the `DESKTOP\_APP\_PLAN.md`  
narrative.\*\* \$7 tracker = source of truth (P0a?e ?, P1a/b ?, P2-launcher/P2a/P2d/P2e ?). \*\*?  
Next:\*\* P3 GPU validation + screencast ? P2b-install ? P2c wizard (cross-repo) ? P4  
(ONNX/train/annotate = north star). Memory `[[packaging-app-plan]]` / `[[next-session-packaging-  
app]]`.

20 - [DESKTOP\_APP\_PLAN.md](DESKTOP\_APP\_PLAN.md) ? \*\*? Superseded narrative (by  
`PACKAGING\_PLAN.md`; D10 = self-hosted webserver, NOT a desktop app).\*\* Original scoping doc  
(2026-06-18, `[design]`): package the local pipeline as a \*\*cross-platform desktop app\*\* for  
non-technical players ? plug in the camera's USB/SD card, click once, get back \*\*only the  
highlight reels\*\*, fully on-device (no upload, no original-video bloat). The centerpiece is the  
\*\*de-WSL native-compute port\*\* (run WASB natively per-OS: Linux/Windows CUDA · macOS MPS/CPU ?  
drop WSL2), and its \*\*make-or-break unknown\*\*: is CPU acceptable on a typical \*no-GPU\*  
enthusiast laptop (WASB is ~3.4x real-time on a laptop 2070S)? \$7 tracker = \*\*P0 compute-  
feasibility spike ? P1 native detector ? P2 app shell ? P3 packaging/installers\*\*. Realizes the  
\*\*L0 fully-local\*\* tier of [VIDEO\_LOCALITY\_MODEL.md](VIDEO\_LOCALITY\_MODEL.md); is the  
\*\*`LocalDesktop` ComputeBackend\*\* of [PLATFORM\_ARCHITECTURE.md](PLATFORM\_ARCHITECTURE.md) §3.2;  
the smaller/export-clean owned model  
([OWNED\_MODEL\_IMPLEMENTATION\_PLAN.md](OWNED\_MODEL\_IMPLEMENTATION\_PLAN.md)) is one answer to the  
compute crux.

21

22 ## Practical / ongoing

23 - [CREATING\_REELS.md](CREATING\_REELS.md) ? \*\*? End-user guide:\*\* install the LIGHT-tier  
app ? `indexer --app` ? process a video ? pick rallies ? download a watermarked reel. Task-first  
usage walkthrough (web UI + the API chain), with a \$6 pointer to the cloud compute option. LIGHT  
tier only (offline `motion` / optional Gemini; no on-device GPU or one-click cloud). Install  
mechanics ? root `[README.md]`(`../README.md`); packaging roadmap ?  
[`PACKAGING\_PLAN.md`](PACKAGING\_PLAN.md).

24 - [CONVERT\_GCS\_VIDEOS\_TO\_HIGHLIGHTS.md](CONVERT\_GCS\_VIDEOS\_TO\_HIGHLIGHTS.md) ? \*\*?  
Operator runbook:\*\* `gs://` bucket videos ? highlight reels on the approved \*\*L4 Cloud Run\*\*  
(scale-to-zero, \$0 idle). Copy-pasteable: build image ? create the GPU Job ? cloud-serving  
control plane ? process(cloud)?query?compile?download ? prove the path  
(`verify\_compute\_path.py`) ? \$0 teardown. \*\*Verified e2e 2026-06-23.\*\* Raw deploy knobs ?  
[`../deploy/cloudrun/README.md`](../deploy/cloudrun/README.md).

25 - [SETUP\_NEW\_MACHINE.md](SETUP\_NEW\_MACHINE.md) ? \*\*? The canonical "spin up a box ?  
ready for training & inference" runbook.\*\* Copy-pasteable, human-followable, \*\*verified end-to-  
end on DigitalOcean (2026-06-20)\*\* ? but \*\*compute is now GCP-only (ADR-013)\*\* , see  
[`deploy/gcp/README.md`](../deploy/gcp/README.md): credentials ? provision ? bootstrap ? suite  
(922 passed) ? secret-free CPU inference (no GPU/keys) ? real Gemini inference ? Gen-0 training,  
with pointers to the GPU/native-detector + bucket paths. The `deploy/digitalocean/\*` scripts are  
provider-agnostic and reused on GCP.

26 - [DATA\_IN\_GCS.md](DATA\_IN\_GCS.md) ? \*\*? The corpus source-of-truth map: where every  
piece of data lives in `gs://khelsutra-rally-corpus`\*\* (canonical layout · current contents +  
drift · how `backend.worker` consumes it · the still-local-only \*\*gap\*\* · migration plan). Read  
this so a session pulls data from the bucket, not from someone's `C:`/`F:`/Drive ? the goal is  
to remove the local box as a blocker. Pairs with the two runbooks below.

27 -  
[`deploy/gcp/nightly\_regression/README.md`](../deploy/gcp/nightly\_regression/README.md) ? \*\*?  
Nightly engine-regression OPERATIONS MANUAL (one-stop shop):\*\* enable · run on demand · change  
any setting (email recipients/frequency/clips/config) · observe · pause/disable/remove. The full  
WASB-pipeline reel-count+cost+email nightly on an ephemeral GCP GPU VM (design/status:  
[`NIGHTLY\_ENGINE\_REGRESSION.md`](NIGHTLY\_ENGINE\_REGRESSION.md)). The lighter CPU cached-  
trajectory tripwire is `scripts/nightly\_regression.py` (local Windows Scheduled Task, PR #202).

28 - [TRACKNET\_WSL\_SETUP.md](TRACKNET\_WSL\_SETUP.md)

29 - Evaluation harness and calibration drivers (in `backend/eval/`)

30

31 ## Data layer (collection · annotation · golden sets ? \*\*no ML\*\*)

32 - [data\_pipeline/](data\_pipeline/README.md) ? \*\*the isolated data pillar\*\*: how  
footage is recorded (`VIDEO\_RECORDING\_GUIDELINES`), golden sets are created + which videos  
(`GOLDEN\_SET\_IMPLEMENTATION` · `GOLDEN\_SET\_PHASE1\_VIDEOS` · `GOLDEN\_VIDEOS`), and data is

shared/ingested (`GOLDEN\_DATA\_SHARING`). Deliberately **\*\*no segmentation/stitching/model\*\*** detail ? that's the ML pillar (top level + `COMPUTE\_DECOUPLED\_SERVING/`). The **\*\*annotation-vendor** (Roora)**\*\*** engagement is archived under `archives/roora-vendor/`.

```
33
34 ## Conventions & templates
35 - PROJECT_DOC_TEMPLATE.md ? Reusable skeleton for a **tracked
project doc2: status header · decisions-locked · progress tracker (??/?) · definition-of-done
· archived on completion. Standardizes the emergent pattern in `RALLY_QUALITY_RESEARCH.md` §7
and `GOLDEN_REGRESSION_FIXTURES.md`. Use for any substantial design/project work.
36
37 ## Historical documents
38 Completed plans, old research, ADRs, and checkpoints live in [`archives/`](archives/).
39
40 - CODE_AUDIT_AND_TEST_HARDENING.md ? **COMPLETED**
(2026-06-14; T1?T5 + full loop + verification per #162). Living record of the June 2026 plumbing
/ contract / architectural audit, 626-test infrastructure, positive test plans for the 5
identified issues, multi-layer regression protocol (including ablation/experiment layer), and
pre/post-change verification checklist. See `docs/archives/CODE_AUDIT_AND_TEST_HARDENING-
COMPLETED-2026-06-14.md` and `docs/archives/checkpoints/2026-06-14-hardening-loop-complete.md`
for the final archived state. (Top-level is now pointer stub per review; full content in
archives/.)
41 - CODE_CLEANUP_AUDIT_2026-06-24.md ? **? Tracked
project (Phase 1 COMPLETE, Phase 2 nearly done):2 the next-wave cleanup project ? 35 audit
findings across bugs, tech debt, operational risks, and quick wins. Phase 1 = pure refactorings
(typed-config migration, app-factory, segmenter validator fix); Phase 2+ = logic fixes. §6
progress tracker is the source of truth; sibling of the completed hardening sweep above.
42 - KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md
? **? Tracked project (IN PROGRESS, 2026-07-02):2 live execution board for the five-repo
`khelsruhe-guru` audit cleanup. Extends the 2026-07-02 audit report, records post-sync completed
items and pushback, then sequences the work into small PR waves with coverage and UI-screenshot
requirements. §7 progress tracker is the source of truth.
43 - DECISION_SNAPSHOT_REGRESSION.md ? **? Tracked
project (decisions D1?D11 LOCKED 2026-06-25, #383; implementation P1?P7 pending):2 a
deterministic **quality-neutral proof** ? freeze + compare the pipeline's **decision output**
(rally segments + stitch/concat plan) off a cached trajectory, GPU-free, in CI. The behavioral
proof that lets a *genuine* (non-AST-identical) refactor be confidently called quality-neutral.
Never hashes the encoded reel (non-deterministic). Extends the existing characterization
snapshot (`test_golden_fixtures.py`) from segmentation to the stitch plan; peer of the M4
quality-floor + GPU `nightly_reelcount.py`. §7 tracker is the source of truth.
44
45 - **Field-ops / customer-feedback** (recruiting flyer · field-visit playbook · PMF) ?
[`archives/field-pmf/`](archives/field-pmf/) (archived 2026-06-21; PMF validation still an
active *business* thread ? see `NEXT_STEPS.md`).
46 - **Roora annotation-vendor** engagement (labeling brief · vendor bake-off) ?
[`archives/roora-vendor/`](archives/roora-vendor/) (archived 2026-06-21).
47 - Superseded: per-video output layout ? [`archives/PER_VIDEO_OUTPUT_LAYOUT-
SUPERSEDED-2026-06-21.md`](archives/PER_VIDEO_OUTPUT_LAYOUT-SUPERSEDED-2026-06-21.md) (?
`PER_VIDEO_WORKSPACE.md`).
48
49 See `archives/README.md` for the umbrella policy and `archives/past_projects/README.md`
for classification of small tech debt / starter projects.
50
```

## 172. assistant (2026-07-02T08:53:37.476Z)

README structure is clear ? the umbrella belongs under " ? Documentation status & governance" (it's currently not linked from README at all), and the three folded/archived entries under "Historical documents" need repointing. Let me make those 4 edits.

## 173. user (2026-07-02T08:53:44.989Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\README.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 174. user (2026-07-02T08:53:56.962Z)

The file C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\scratchpad\wt-docs\docs\README.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 175. assistant (2026-07-02T08:54:18.383Z)

Now repoint the `DEFERRED\_HARDENING\_PLAN.md` links in PLATFORM\_ARCHITECTURE (x4) and DESKTOP\_APP\_PLAN (x1) to the archived copy. Let me read a slice of each to confirm the exact link form, then replace.

#### 176. user (2026-07-02T08:54:20.282Z)

```
46
47 > Scope: this is a **direction-setting doc**. It does not start implementation; the
48 > first infra slice (an async job model) is the on-hold #16 in
49 > DEFERRED_HARDENING_PLAN.md. Commercial constraints
come
50 > from COMMERCIALIZATION.md (C4 paid-LLM no-train; C12 SaaS
51 > foundations) and `archives/MONETIZATION_AUDIT.md`.
```

finder: engine:audit-doc-reconcile
```

docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md:60: trailing whitespace.

+ evidence: gh pr view 390: state=OPEN, mergeable=CONFLICTING, mergeStateStatus=DIRTY, updatedAt=2026-06-26T14:37Z, 3 files (backend/main.py, backend/orchestration.py, mypy.ini). Since then >=8 PRs modified backend/main.py (#400, #405-#409, #412, #413 per git log --since=2026-06-25 -- backend/main.py). wc -l backend/main.py = 2198 vs the audit doc's '1448 lines' claim

(docs/archives/past\_projects/CODE\_CLEANUP\_AUDIT\_2026-06-24-SUPERSEDED-2026-07-02.md:279); 18 @app. routes and 45 print() calls now live in it; backend.main still mypy-quarantined (mypy.ini:15). No backend/orchestration.py exists on master.

docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md:64: trailing whitespace.

+ verifier reasoning: Every load-bearing claim reproduced. (1) `gh pr view 390` returns state=OPEN, mergeable=CONFLICTING, mergeStateStatus=DIRTY, updatedAt=2026-06-26T14:37:18Z, exactly 3 files: backend/main.py (+19/-595), backend/orchestration.py (ADDED, +635), mypy.ini (+6). (2) Current working tree (branch master, HEAD e410136 = PR #413): `wc -l backend/main.py` = 2198; 1448?2198 is +51.8% ? the claimed 52%; the 1448 baseline is documented in docs/archives/past\_projects/CODE\_CLEANUP\_AUDIT\_2026-06-24-SUPERSEDED-2026-07-02.md changelog ("main.py size '~1300' ? '~1450' (now 1448 lines)", 2026-06-25 entry, ~line 278-279). (3) Not fixed: backend/orchestration.py does not exist in the tree, and git log --since=2026-06-25 -- backend/main.py shows the file only grew ? commits for PRs #413, #412, #409, #408, #407, #406, #405, #400 (the claimed 8; the log actually lists 10 incl. #387 ruff-format and #380). (4) grep counts on backend/main.py: 18 lines matching `^@app\.` and 45 `print(` occurrences ? exactly as claimed. (5) mypy.ini:15-16 = `[mypy-backend.main]` / `ignore\_errors = True` (quarantine intact). (6) Audit doc §6 tracker line 198: P10 row "D1: Split main.py god-module (~1450 lines ? smaller modules)" is ?; the only other ? row is line 205 (P16+ Phase 3 bucket), so P10 is indeed the sole non-Phase-3 open item; D1 is rated HIGH at doc line 69. Severity P1 is honest for a tech-debt audit: the concrete failure is already materialized (the 635-line extraction in #390 is unmergeable today), and it compounds ? 8 endpoint-adding PRs landed in the god-module in the week since the PR was cut, all inside a mypy ignore\_errors module, so each week of delay increases rework cost and unchecked-type surface. Not owner-gated: internal refactor, no serving go-live / corpus-promotion / spend / licensing implications ("P10" here is the audit tracker row, not Studio P10). Proposed fix (close-and-recut or rebase from origin/master, then continue the split per the doc's own plan at line 247, and fix the stale ~1450 sizing) is sane and correctly scoped; effort M is right given the fix includes continuing the split beyond the re-cut.

docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md:176: trailing whitespace.

+ anchor: `docs/DOC\_STATUS.md:47` · tracked in:

docs/archives/past\_projects/CODE\_CLEANUP\_AUDIT\_2026-06-24-SUPERSEDED-2026-07-02.md §8 DoD (unchecked 'docs/README.md updated' item) · finder: engine:audit-doc-reconcile

docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md:181: trailing whitespace.

+ verifier reasoning: Every cited fact reproduces in the current working tree (master == origin/master, HEAD #413). (1) docs/DOC\_STATUS.md:47 still reads "IN PROGRESS ? Phase 1: P0/P1/P4/P6a shipped (#352/#355/#354/#356). Quick wins (Q4/Q5/Q6/Q8) next", while docs/archives/past\_projects/CODE\_CLEANUP\_AUDIT\_2026-06-24-SUPERSEDED-2026-07-02.md:8 says "Status: PHASE 1 COMPLETE ? 14 items shipped" and its §6 tracker (lines 180-205) shows P6b-P7 plus Phase-2 items P8/P9/P11/P12/P13/P14/P15/P17 all ? merged (#358-#386); only P10 and P16+ remain ? ? the row is ~17 merged PRs stale. (2) DOC\_STATUS.md has no row anywhere (§3a-§3e read in full) for DECISION\_SNAPSHOT\_REGRESSION.md, which exists (created 2026-06-25, merged in #383 per git log of docs/README.md: commit 1283e18) ? violating DOC\_STATUS.md:4's own cadence ("whenever a doc changes lifecycle state (created ...)"). (3) git log confirms DOC\_STATUS.md was last touched by #403 (6e973af, the 2026-06-30 rally-cluster fix) without fixing either ? so NOT already fixed; the cleanup-audit row was last updated in #357. (4) docs/README.md:41 still calls the audit "? Tracked project (DRAFT, owner-gated)" and :42 calls the snapshot doc "DRAFT, owner-gated ? decisions in §2 need locking", contradicted by DECISION\_SNAPSHOT\_REGRESSION.md:8 and :26 ("D1?D11 LOCKED 2026-06-25"). (5) docs/NEXT\_STEPS.md:6 says "owner M0 design sign-off pending", contradicted by line 14 in the same file ("M0?M9 LARGELY SHIPPED (2026-06-21, ADR-014 ratified)"); #404 (the last NEXT\_STEPS commit) added the NO-GO block but left the stale paragraph. (6) The audit's own DoD at CODE\_CLEANUP\_AUDIT\_2026-06-24.md:225 has the unchecked "[ ] docs/README.md updated to reflect the project's terminal state" item, matching tracked\_in. Not owner-gated: a docs-only reconcile records already-shipped, already-merged state ? no launch, corpus-promotion, strategy, spend, or counsel decision is being made (the #404 NO-GO block must simply be preserved verbatim). Concrete failure: a fresh session following the session-start

convention reads DOC\_STATUS:47, plans "Q4/Q5/Q6/Q8 next" (shipped 5+ days ago in #358-#361), or reads README:42 and re-litigates D1-D11 that are LOCKED ? exactly the relitigation failure the register exists to prevent. P2/S are honest: it burns ramp-up time and risks duplicate work but breaks no code.

docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md:257: trailing whitespace.

+ - anchor: `backend/infrastructure/database.py:25` · tracked in: mypy.ini comments reference the typed-config migration (D3) in

docs/archives/past\_projects/CODE\_CLEANUP\_AUDIT\_2026-06-24-SUPERSEDED-2026-07-02.md · finder: engine:structure

docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md:262: trailing whitespace.

+ - verifier reasoning: Every factual claim reproduces on the current working tree. (1) Line counts exact via `wc -l: backend/infrastructure/database.py 1,259; backend/eval/golden_fixtures.py 1,035; backend/pipeline/detectors/wasb_infer.py 870; backend/eval/rally_seg_eval.py 849; backend/worker/__main__.py 748`. (2) `database.py:25` defines the single `class Database` (only one in `backend/`, confirmed by `grep`) with exactly 50 methods (`def` lines 26?1232, counted from `grep` of `class/def`), spanning videos (`add_video:467, get_video:669, list_videos:682`), segments (`add_play_segment:549, prune_segments:510, query_play_segments:701`), candidates (`add_candidate_segment:593, query_candidate_segments:640`), jobs (`create_job:764` through `claim_due_job:1094, fail_stale_jobs:1122`), costs/`pricebook` (`get_pricebook_rates:902, record_job_cost:932`), user models (`upsert_user_model:1148`), plus 9 schema migrations (`_migrate_to_v1..v9, lines 230?457`) and `SchemaTooNewError` at `database.py:21` exactly as cited. (3) `golden_fixtures.py:1003?1031` contains the documented PEP 562 lazy re-export cycle with `golden_real_fixtures` (file exists), matching the cited 1005?1028. (4) `mypy.ini:18?23` quarantines `backend.worker.__main__` citing the `dict?AppConfig` shim shared with `backend.main` (itself quarantined at `mypy.ini:15?16`). (5) Not already fixed: `git log -10 -- database.py` shows only formatting/`isort`/`feature` commits (`b6214e5` `ruff` format is the latest structural touch); `backend/infrastructure/` contains only `database.py` and `execution_policy.py` ? no repository split exists. (6) Not owner-gated: a behavior-preserving repository split behind the existing facade is a pure refactoring in the same class as the already-approved D1/P10 cleanup track

(`docs/archives/past_projects/CODE_CLEANUP_AUDIT_2026-06-24-SUPERSEDED-2026-07-02.md` line 198); it touches none of the gate categories (no serving go-live, no Studio corpus/training, no spend, no ToS). P2/L are honest: this is compounding maintainability debt (`main.py` has meanwhile grown to 2,198 lines, past the audit's ~1450), not an active defect, so P2 not P1; a 50-method by-domain split with facade preservation is legitimately L.

docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md:610: trailing whitespace.

+ - Khelsutra/badminton-highlight-indexer: Issue #331's per-phase perf baseline was measured on the retired D0 droplet ? re-baseline before spending optimization effort (`doc-rot, `docs/COMPUTE_DECOUPLED_SERVING/README.md``)

`check\_md\_links` is clean. The `git diff --check` trailing-whitespace flags are suspicious ? they include lines I didn't semantically change (e.g. line 8). This smells like a **line-ending issue**: the umbrella file may be CRLF while my appended block is LF. No CI gate checks whitespace, but a mixed-EOL file is sloppy. Let me investigate.

### 194. user (2026-07-02T08:57:15.686Z)

```

#### 195. assistant (2026-07-02T08:57:43.914Z)

The file is pure **\*\*LF\*\*** (0 CRLF) ? no line-ending problem. The ``git diff --check`` flags are **\*\*trailing spaces\*\***, which this generated audit doc has pervasively (pre-existing). Let me confirm whether my **\*own\*** added lines (header + appended block) introduced trailing spaces vs. it being the file's existing style ? I don't want to reformat 800 pre-existing lines, but my new content should be clean.

#### 196. user (2026-07-02T08:57:48.779Z)

```
=== trailing-whitespace count across the WHOLE umbrella (pre-existing style check) ===
```

```
21
```

```
=== my HEADER lines 1-6: any trailing spaces? ===
```

```
header clean
```

```
=== my APPENDED block (lines 608-807): any trailing spaces? ===
```

```
0
```

```
=== so trailing WS is pre-existing on original lines 1-607? ===
```

```
21
```

#### 197. assistant (2026-07-02T08:58:42.159Z)

My header and appended block are both clean; the 21 trailing-whitespace lines are all pre-existing generator style in the original findings (lines 1?607). Let me definitively confirm which **\*added\*** lines in the staged diff carry trailing whitespace, so I only clean my own content and don't churn (or alter markdown hard-breaks in) the pre-existing text.

#### 198. user (2026-07-02T08:58:47.159Z)

```
=== ADDED (+) lines in the staged diff that end in whitespace ? content preview ===
```

```
--- count ---
```

```
0
```

```
=== are these lines ALSO present as removed (-) with same trailing WS? (=pre-existing,
replace_all just re-touched) ===
```

```
0
```

#### 199. assistant (2026-07-02T08:59:07.532Z)

``grep`` on the staged diff finds **\*\*0 added lines\*\*** ending in whitespace ? contradicting the earlier ``--check`` output. Let me re-run ``--check`` now and hexdump a flagged line's tail to

settle exactly what git is seeing.

#### 200. user (2026-07-02T08:59:11.636Z)

```
=== re-run git diff --cached --check (count of complaints) ===
34
docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md:1: trailing whitespace.
+# khelsutra-guru multi-repo code audit ? umbrella (2026-07-02)
docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md:2: trailing whitespace.
+
```

```
=== exact trailing bytes of line 8 (hexdump last 16 bytes) ===
00000000: 6570 6f72 7420 3166 3732 6331 6329 2e0a eport 1f72c1c)..
=== exact trailing bytes of line 1 (my header) ===
00000000: 6c61 2028 3230 3236 2d30 372d 3032 290a la (2026-07-02).
```

#### 201. assistant (2026-07-02T08:59:39.646Z)

Working-tree lines 1 and 8 hexdump clean (end in `0a`, no trailing space/CR) ? yet `--check` still flags them. That points to the **\*\*staged (index) blob\*\*** differing from the working tree ? likely a CRLF conversion on `git add`. Let me check the index blob's line endings and the autocrlf setting.

#### 202. user (2026-07-02T08:59:46.777Z)

```
=== core.autocrlf / eol / safecrlf ===
true
=== STAGED (index) blob CRLF count ===
0
=== WORKING TREE CRLF count (again) ===
0
=== .gitattributes: any global text/eol rule that'd touch *.md? ===
5:eval_baselines/fixtures/** text eol=lf
10:*.sh text eol=lf
=== does --check complain about the OTHER edited docs (README etc.) too, or only the umbrella?
===
docs/README.md: 0
docs/DOC_STATUS.md: 0
docs/NEXT_STEPS.md: 0
docs/PLATFORM_ARCHITECTURE.md: 0
```

#### 203. assistant (2026-07-02T09:00:37.240Z)

Resolved: `core.autocrlf=true` interacting with an LF working-tree file makes `git diff --check` \*spuriously\* warn ? but the **\*\*staged blob is clean LF (0 CRLF), 0 added lines have trailing whitespace\*\***, and the other 4 edited docs show `--check` clean. The committed content will be clean LF matching history, with the 21 pre-existing generator trailing-spaces left untouched (no churn). Safe to commit. Let me re-verify base + staged set, then commit.

#### 204. user (2026-07-02T09:00:42.794Z)

```

Clean, complete, base unchanged. Committing.

#### 206. assistant (2026-07-02T09:00:54.628Z)

docs: make AUDIT\_REPORT the umbrella code-audit doc; fold + archive the rest

Per owner request, consolidate the audit docs into a single living umbrella (docs/AUDIT\_REPORT\_khelsutra-guru-2026-07-02.md); archive the older ones so only the latest remains at docs/ top level.

- Umbrella: header flipped to a living / IN-PROGRESS tracked project; appended the folded-in live \*Remediation tracker\* (from KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN, P0-P28) + a \*Prior audits (absorbed)\* section + a changelog. Repointed in-body references off the now-archived CODE\_CLEANUP path.
- Archived (git mv -> docs/archives/past\_projects/, with SUPERSEDED/FOLDED banners): CODE\_CLEANUP\_AUDIT\_2026-06-24, KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN.
- Finish-archived the three June-2026 hardening pointer-stubs (git rm; full copies already under docs/archives/) -- resolves DOC\_STATUS section 4 finding #4.
- Repointed all inbound live-doc links: README (governance + historical), PLATFORM\_ARCHITECTURE (x4), DESKTOP\_APP\_PLAN, NEXT\_STEPS; updated DOC\_STATUS rows (3a umbrella, 3c/3e, finding #4 resolved).

Docs-only. Local: `python -m tools.check\_md\_links` clean; committed content is LF with no new trailing whitespace (pre-existing generator trailing-WS left untouched to avoid churn).

#### 209. assistant (2026-07-02T09:01:21.111Z)

Pushed cleanly (only my commit `6a338dc`). Now open the PR and watch CI.

## 210. assistant (2026-07-02T09:01:30.836Z)

### What / why

Per owner request: make `docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md` the **single umbrella code-audit doc**, merge everything else into it, and archive the older audits so only the latest remains at `docs/` top level.

### Changes

- **Umbrella** (`AUDIT\_REPORT\_2026-07-02.md`) ? now a **living / IN-PROGRESS** tracked project (was a point-in-time snapshot). Appended two sections:
  - **Remediation tracker (live)** ? the folded-in `KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN` (decisions, wave model, verification policy, risk table, the **P0?P28** progress table = source of truth, open questions, DoD, the audit-batch PR-dispositions table, changelog).
  - **Prior audits (absorbed)** ? summary + archive links for `CODE\_CLEANUP\_AUDIT\_2026-06-24` and the June-2026 test-hardening sweep.
    - Repointed the in-body finding references off the now-archived CODE\_CLEANUP path.
- **Archived** (`git mv` ? `docs/archives/past\_projects/`, with SUPERSEDED/FOLDED banners per `DOC\_STATUS` \$2): `CODE\_CLEANUP\_AUDIT\_2026-06-24`, `KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN`.
- **Finish-archived** the three June-2026 hardening pointer-stubs (`git rm`; full copies already under `docs/archives/`) ? **resolves** `DOC\_STATUS` \$4 finding #4.
- **Repointed all inbound live-doc links** so nothing breaks: `README` (governance + historical), `PLATFORM\_ARCHITECTURE` (x4), `DESKTOP\_APP\_PLAN`, `NEXT\_STEPS`; updated `DOC\_STATUS` rows (\$3a umbrella, \$3c hardening resolved, \$3e newly-archived, \$4 finding #4).

Result: only `docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md` remains as the live audit doc; all prior audits are absorbed + archived with lineage.

### Verification

- `python -m tools.check\_md\_links` ? **clean**; independently confirmed **zero** remaining live-doc markdown links to any moved/removed file.
- Committed content is **LF** (matches history); **no new trailing whitespace** on added lines (the ~21 pre-existing generator trailing-space lines were left untouched to avoid churn ? `git diff --check` flags those are a known `core.autocrlf` false-positive against an LF-in-worktree file, staged blob is clean LF).
- Docs-only; no code paths touched.

#### 215. assistant (2026-07-02T09:02:07.139Z)

PR [#430](https://github.com/Khelsutra/badminton-highlight-indexer/pull/430) is open and CI is running (I'll merge on green). Here's what the consolidation does:

**\*\*`docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md` is now the single umbrella code-audit doc\*\*** (flipped from a frozen snapshot to a living / IN-PROGRESS tracked project):

- **\*\*Folded in\*\*** the live `KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN` as a **\*Remediation tracker (live)\*** section (the P0?P28 table is now the source of truth) ? and archived the standalone plan.

- **\*\*Absorbed\*\*** `CODE\_CLEANUP\_AUDIT\_2026-06-24` + the June-2026 hardening sweep into a **\*Prior audits (absorbed)\*** section ? with archive links.

**\*\*Archived / removed (only the latest remains):\*\***

- `git mv` ? `docs/archives/past\_projects/`:  
`CODE\_CLEANUP\_AUDIT\_2026-06-24-SUPERSEDED-2026-07-02.md`,  
`KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN-FOLDED-2026-07-02.md` (both with banners).
- `git rm` the three redundant June-2026 hardening pointer-stubs (full copies already in `docs/archives/`) ? this **\*\*closes the long-open DOC\_STATUS \$4 finding #4\*\***.

**\*\*Followed the DOC\_STATUS \$2 archival checklist:\*\*** verified claims, added completion banners, kept lineage, and repointed **\*\*every inbound live-doc link\*\*** (README, `PLATFORM\_ARCHITECTURE` x4, `DESKTOP\_APP\_PLAN`, `NEXT\_STEPS`) + updated the DOC\_STATUS register rows. `check\_md\_links` is clean with **\*\*zero\*\*** dangling links.

Once CI is green I'll merge #430, remove the worktree, and refresh the memory handoff. (The `git diff --check` trailing-whitespace noise was a `core.autocrlf` false-positive ? the committed blob is clean LF; I left the ~21 pre-existing generator trailing-spaces untouched to avoid churn.)

#### 219. user (2026-07-02T09:02:08.912Z)

After you have merged the doc fixtures and made everything synchronous, Can you take over #390 or independently work and close that one for making this god module main.py which is over 2300 lines broken down into more manageable modules like 390 was trying? I want to make sure it is done very carefully because it is the hearth of the system but we should refactor it such that it doesn't bloat up.

#### 220. assistant (2026-07-02T09:02:46.825Z)

Understood. Plan: (1) merge #430 once CI is green, (2) study #390 + current `main.py` to decide take-over vs re-cut ? the tracker (P23) and the audit evidence already lean "close + re-cut fresh" since `main.py` grew ~63% under it, (3) execute the split in small, behavior-neutral, individually-verified PRs, and (4) build in an **\*\*anti-bloat guard\*\*** so `main.py` can't silently regrow. Let me check where #430's CI stands and look at #390's actual approach in parallel.

## Summary

First step of the **P10 / D1** item from ``docs/CODE_CLEANUP_AUDIT_2026-06-24.md``: split the ``backend/main.py`` god-module. This PR extracts the **processing + compile orchestration** into a new ``backend/orchestration.py``, reducing ``main.py`` from **1797 ? 1217 lines** (32% reduction).

> **Scope note:** This is the first of a multi-step split (P10a). The CLI (``main()``) and route handlers stay in ``main.py`` for now ? they're tightly coupled to the module globals (``global_config`/`db_instance``) and the ``app`` object, so moving them needs careful global-mutation handling (tracked in #388 / P10b). This PR proves the extraction pattern and delivers the biggest single win.

## What moved ? ``backend/orchestration.py`` (635 lines)

Function	Purpose
<code>`_finalize_reingest`</code>	Destroy-AFTER-confirm segment commit
<code>`_ingest_remote_segments`</code>	Cloud job result ? DB rows
<code>`_cloud_available`</code>	Can this box dispatch a cloud job?
<code>`_maybe_dispatch_remote`</code>	Cloud Run dispatch + ingest (default-OFF)
<code>`_execute_processing`</code>	Full hash ? validate ? segment ? report pipeline
<code>`_CompileError`</code>	Submit-time-validatable compile problem
<code>`_resolve_compile`</code>	Shared submit/worker compile resolution
<code>`_execute_compile`</code>	Worker handler for a compile job

## Proof this is behavior-preserving

AST-verified (not just "looks safe"):

- ? All 8 extracted functions are **AST-identical** to the originals in ``main.py`` (except 2 intentional, semantically-neutral changes to avoid a circular import ? see below).
- ? All **30** retained functions in ``main.py`` (routes + CLI + helpers) are **byte-identical** to master.
- ? The **21** consumers that do ``import backend.main as m`` and access ``_execute_processing`` / ``_resolve_compile`` / etc. keep working unchanged ? the symbols are re-exported via the import.

## The 2 intentional AST deltas (circular-import avoidance)

1. ``_maybe_dispatch_remote``: the ``ProcessRequest`` annotation is now a string forward-ref (``"ProcessRequest"``) instead of a bare ``Name`` ? avoids importing ``backend.main`` at module load.
2. ``_execute_processing``: the backward-compat shim that reads ``db_instance`/`global_config`` now imports them **lazily** from ``backend.main`` inside the function body (was a bare module-global reference) ? defers the circular import to call-time.

Both are annotation/import-mechanics only; runtime behavior is identical.

## Follow-ups (tracked)

- **##388** ? migrate the async-job plumbing (``_get_executor`/`_drain_due_jobs`/`_arm_wake_timer``) out of ``main.py``.
- **P10b** ? extract the CLI (``main()``) and route handlers, handling the ``global`` statement + ``app`` coupling.

#430 merged ? docs consolidation complete. Now closing #390 with the disposition comment.

#### 244. assistant (2026-07-02T09:06:29.445Z)

Closing to **re-cut** fresh from ``origin/master`` (owner-approved; tracked as umbrella Remediation-tracker **P23**).

The design here was right ? extract the processing/compile orchestration with AST-identity proof and a ``backend.main`` re-export shim ? and the re-cut reuses that pattern. But this PR can no longer be taken over:

- It was cut when ``main.py`` was **1797 lines**; master's ``main.py`` is now **2360** (~10 PRs landed in it since 2026-06-26), so the PR is CONFLICTING/DIRTY.
- More importantly, the **extracted** copies are stale implementations: since this branch was cut, ``_execute_processing`` gained content-hash idempotency + ``force`` persistence (#424) and `scratch-dir` cleanup (#427), ``/api/source``-adjacent orchestration changed (#425), ``_execute_compile``/compile paths gained `scratch` cleanup (#427) and `ffmpeg` timeout mapping (#426), and ``_maybe_dispatch_remote``'s Cloud Run path gained `rescue-or-cancel` salvage (#417). Merging (or mechanically rebasing) this extraction would risk resurrecting pre-fix behavior in the moved bodies ? exactly the wrong risk profile for the heart of the system.

**Re-cut plan (started):** same target module + same seam discipline as the ``backend.api.job_worker`` extraction ? every cross-function seam resolved through the ``backend.main`` module object at call time, names re-exported from ``backend.main`` so all existing ``monkeypatch.setattr(backend.main, ?)`` seams and ``import backend.main as m`` consumers keep working ? but extracting **today's** function bodies, with AST-identity verification against current master, plus a **line-budget ratchet test** so ``main.py`` cannot silently regrow.

=== __main__ block (module-identity trap) ===
if __name__ == "__main__":
 # `python -m backend.main` runs THIS file as `__main__`, but `job_worker`/`uploads` resolve
the
 # shared mutable state (`db_instance`, `global_config`) via `import backend.main` ? a
SEPARATE
 # module object. If `main()` runs here it configures `__main__`'s globals, leaving
 # `backend.main.db_instance` = None; the async-job drain then crashes silently on
 # `None.claim_due_job()` and every submitted job hangs in 'queued' forever. Dispatch through
 # `backend.main` so `main()` configures the module everyone actually reads. (No recursion:
 # imported as `backend.main`, `__name__` != "__main__", so this block doesn't re-fire.)
import backend.main as _bm

 _bm.main()

```

#### 249. user (2026-07-02T09:08:37.362Z)

Deleted branch docs/umbrella-audit-consolidation (was 6a338dc).  
refactor/p23-orchestration-split  
30736ab docs: make AUDIT\_REPORT the umbrella code-audit doc; fold + archive the rest (#430)

```

=== mypy quarantine list (context for new module) ===
[mypy]

```

**Lenient, GREEN baseline (quality sweep AI-4): the gate protects the clean modules and pins an explicit quarantine list below ? not a typing crusade.**  
**Ratchet: when you touch a quarantined module, try removing its entry.**

```
ignore_missing_imports = True
```

**backend/** is a namespace package (no root `__init__.py`) ? required so mypy maps files to **backend.\*** module names instead of duplicating top-level names.

```
explicit_package_bases = True
```

**--- Quarantine (known-loose modules, each with a reason) ---**

**Optional module globals (db\_instance/global\_config set by create\_app() / main()).**

**Route handlers use request.app.state exclusively; helpers take explicit params.**

**backend.api.job\_worker** lifted from quarantine (now takes explicit config/db params).

```
[mypy-backend.main]
ignore_errors = True
```

**Worker dispatcher: composes the SAME validator/segmenter/report building blocks as backend.main, which are typed `config: dict` but receive the AppConfig migration shim at runtime (the .get() compat layer). Shares backend.main's config-shim quarantine until the typed-config migration removes the dict?AppConfig duality everywhere.**

```
[mypy-backend.worker.__main__]
ignore_errors = True
```

**yolo\_hybrid: the fusion-P1 extraction moved its loose torchvision/cv2 inline code to detectors/person\_detector.py (which IS type-clean, no quarantine). What remains here is pre-existing orchestration debt unrelated to that move (implicit-Optional process\_video defaults, the Success|Failure ABC-override mismatch, a Future[...] annotation) ? ratchet those out in a focused typing pass, not here.**

**(wasb\_hybrid/tracknet\_hybrid left the quarantine with the AI-7 collapse.)**

```
[mypy-backend.pipeline.segmenters.yolo_hybrid]
ignore_errors = True
```

```
[mypy-backend.pipeline.segmenters.gemini]
ignore_errors = True
```

**Registry builds cls(None, {}) probes; typing it honestly needs a Protocol.**

```
[mypy-backend.pipeline.segmenters.base]
ignore_errors = True
```

**250. assistant (2026-07-02T09:08:45.699Z)**

Branch cut. Now reading the blocks to move ? imports first, then the orchestration bodies.

HEADER = '''""Processing / compile orchestration, extracted from ``backend.main`` (P23; re-cut of #390).
```

The full hash -> validate -> segment -> report pipeline (``\_execute\_processing``), the Cloud Run dispatch + ingest path (``\_maybe\_dispatch\_remote`` / ``\_ingest\_remote\_segments``), and the shared compile resolution + worker handler (``\_resolve\_compile`` / ``\_execute\_compile``).

Extracted verbatim from ``backend.main`` to shrink the orchestrator; behavior is unchanged.

SEAM DISCIPLINE (same convention as ``backend.api.job\_worker``): anything that must remain monkeypatchable-on-``backend.main`` or that lives in ``backend.main`` (the transitional ``db\_instance``/``global\_config`` globals and the ``ProcessRequest`` model) is resolved through the ``backend.main`` module object at call time (``import backend.main as \_main``), never as a bare local. ``backend.main`` re-exports every name below, so ``monkeypatch.setattr(backend.main, ...)`` and ``import backend.main as m; m.\_execute\_processing(...)`` keep working unchanged. This module must NOT import ``backend.main`` at module level (main imports us for the re-export).

#### 271. assistant (2026-07-02T09:14:06.888Z)

The re-export block landed mid-import (bad anchor). Let me inspect the damage zone.

#### 272. user (2026-07-02T09:14:08.985Z)

**Async job worker ? drain/wake loop (DEFERRED\_HARDENING\_PLAN #16, EXECUTION now lives in backend.api.job\_worker. Re-exported here so the names stay addressable in backend.main` (`JobWaiting`, `\_drain\_due\_jobs`, `\_arm\_wake\_timer`, `\_get\_executor`, `\_run\_claimed\_job`, `\_MAX\_DRAIN\_WAKE\_SEC`, ...). The worker resolves these seams at call-time, so `monkeypatch.setattr(backend.main, ...)` still intercepts the inter-function calls (a parked job arms the PATCHED `\_arm\_wake\_timer` so no real daemon timer leaks in tests). Behavior is unchanged by the extraction.**

```
from backend.api.job_worker import (# noqa: F401 (re-exports: names stay addressable on
backend.main)
```

**The processing/compile ORCHESTRATION (hash?validate?segment?report pipeline, dispatch+ingest, compile resolution + worker handler) now lives in backend.orchestration (P23 god-module split; re-cut of #390). Re-exported here so the names stay addressable in backend.main ? `import backend.main as m; m.\_execute\_processing(...)` , the job worker at call-time `\_main.\_execute\_compile(...)` seam, and monkeypatch.setattr(backend.main,**

## all keep working unchanged.

```
from backend.orchestration import (# noqa: F401 (re-exports: names stay addressable on
backend.main)

"""Anti-bloat ratchet for the ``backend.main`` god-module split (P23; re-cut of #390).

``backend/main.py`` grew 1448 -> 2360 lines in under a week because every endpoint/fix PR
landed in it. The P23 extraction moved the processing/compile orchestration to
``backend/orchestration.py``; this ratchet keeps the split from silently regressing:

- **Line budget:** ``backend/main.py`` must stay at/below ``MAIN_LINE_BUDGET``. When a
 later split lands (CLI -> P23 step 2, routes -> P24), TIGHTEN the budget to the new
 size + small slack ? never loosen it without an owner-visible PR discussion.
- **Route ceiling:** no NEW ``@app.<method>`` routes in ``main.py`` ? new endpoints go in
 ``backend/api/`` (see ``backend/api/uploads.py`` for the pattern).
- **Re-export contract:** every orchestration name stays addressable on ``backend.main``
 (``import backend.main as m; m._execute_processing`` and
 ``monkeypatch.setattr(backend.main, ...)`` are load-bearing seams ? see
 ``backend/api/job_worker.py``'s module docstring).

If this test fails your PR: extract, don't inline. Umbrella tracker:
``docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md`` (Remediation tracker P23/P24).

<status>completed</status>
<summary>Dynamic workflow "Adversarial review of the main.py -> orchestration.py extraction
before commit" completed</summary>
<result>[{"lens":"seams","confirmed":[{"title":"Delta enumeration in the PR claim is stale: 4
unenumerated (but necessary and correct) deltas exist in orchestration.py","detail":"The review
request claims the 10 members are AST-identical to master except 3 enumerated deltas. The
worktree file (modified 14:54 IST, mid-review) contains FOUR additional intentional deltas: (a)
_execute_processing resolves compute_video_id via _main.compute_video_id (orchestration.py:386)
instead of a bare call; (b) it resolves emit_indexer_report via _main.emit_indexer_report
(orchestration.py:571); (c) _execute_compile gained its own call-time 'import backend.main as
_main' (orchestration.py:679); (d) it constructs the compiler via _main.VideoCompiler
(orchestration.py:702). Correspondingly, VideoCompiler / compute_video_id / emit_indexer_report
are NOT imported at orchestration's top. These deltas are exactly what keeps the existing test
seams alive ? monkeypatch.setattr(m, \"VideoCompiler\") at
tests/test_api_endpoints.py:411,455,486,531,575, setattr(m, \"emit_indexer_report\") at :782,
and setattr(m, \"compute_video_id\") at :817 all target names consumed inside the moved
functions; with bare calls (the file's earlier state this session) those 7+ tests would not
intercept and several would fail. I confirmed empirically the loaded function globals contain no
VideoCompiler/compute_video_id/emit_indexer_report and that the affected tests pass against the
current file. ACTION: re-run the machine AST-identity verification against the FINAL file and
update the PR description / delta enumeration to list all 7 deltas (3 original + these 4) before
commit ? the file churned under review, so pin the verified
state.\",\"severity\":\"major\",\"evidence\":\"wt-docs/backend/orchestration.py:386, wt-
docs/backend/orchestration.py:571, wt-docs/backend/orchestration.py:679, wt-
docs/backend/orchestration.py:702; consumers: wt-docs/tests/test_api_endpoints.py:411,455,486,53
1,575,782,817\",\"verdict\":{\"real\":true,\"reasoning\":\"Every element of the claim reproduces against
the worktree. (1) The four unenumerated deltas exist at exactly the cited lines in wt-
docs/backend/orchestration.py: _main.compute_video_id(local_video)` at line 386,
_main.emit_indexer_report(` at line 571, `import backend.main as _main` inside _execute_compile
at line 679, and _main.VideoCompiler(` at line 702. (2) They are genuine deviations from
master: `git show origin/master:backend/main.py` shows the moved functions used BARE calls ?
`compute_video_id(local_video)` (master:1271), `emit_indexer_report(` (master:1456),
`VideoCompiler(` (master:1816) ? and master's _execute_compile has no `import backend.main as
_main`. (3) They are not covered by the enumerated deltas in the review request: delta (2)
covers only global_config/db_instance/ProcessRequest in _execute_processing; nothing enumerates
compute_video_id, emit_indexer_report, or _execute_compile's _main import / _main.VideoCompiler.
So the claim \"everything else is AST-identical, machine-verified\" is stale as stated. (4) The
```

deltas are load-bearing, with concrete consumers:  
VideoCompiler/compute\_video\_id/emit\_indexer\_report are NOT imported at orchestration's top (grep confirms; empirically `\_\_execute\_compile.\_\_globals\_\_` contains none of the three, and backend.main re-exports are identity-equal to the orchestration functions).  
tests/test\_api\_endpoints.py patches backend.main at exactly the cited lines ? setattr(m, `\"VideoCompiler\"`) at 411, 455, 486, 531, 575; setattr(m, `\"emit\_indexer\_report\"`) at 782; setattr(m, `\"compute\_video\_id\"`) at 817 ? and these names are consumed inside the moved \_execute\_processing/\_execute\_compile. With bare calls the moved code would not even find the names in orchestration's globals (NameError), so all 7+ of those tests would concretely fail; with the \_main indirection the full file passes (ran it: 51 passed, 1 skipped). Concrete failure scenario satisfied: the PR's delta enumeration/AST-identity claim describes a file state under which enumerated-state code would break 7+ tests, and the file demonstrably churned mid-review (mtime 14:54). The code itself is correct ? the finding is that the PR description/verification is stale and must be re-pinned against the final file, which is exactly what the reviewer demands. Severity `\"major\"` is defensible for a sign-off-gating process defect, though the shipped code has no bug.`}},{\"title\":\"Verified OK ? all four requested seam checks pass against the current worktree state (162 passed, 1 skipped)\",\"detail\":\"(1) Every patch of a moved name still intercepts its consumer: \_remote\_input\_size\_bytes is consumed only by retained routes in main.py (backend/main.py:643, 872, 1017) whose bare lookups hit main's module dict where the re-export bound the name ? monkeypatch rebinds that dict, so interception is preserved; orchestration never calls it internally. \_execute\_compile/\_execute\_processing patches (tests/test\_async\_jobs.py:503,506) intercept because job\_worker resolves them at call time through the backend.main module object. (2) backend/api/job\_worker.py:114 (\_main.\_execute\_compile) and :122 (\_main.\_execute\_processing) are covered by the re-export block at backend/main.py:306-316; test\_worker\_dispatches\_compile\_kind\_to\_execute\_compile passes. (3) Retained main.py call sites of moved names ? \_cloud\_available (backend/main.py:473), \_remote\_input\_size\_bytes (:643,:872,:1017), \_resolve\_compile/\_CompileError (:1170,:1177), \_finalize\_reingest/\_report\_config\_for\_input (:1618,:1628) ? all resolve via the from-import binding in main's globals, and patching backend.main.<name> rebinds exactly that dict, so route-level interception matches master. (4) Direct m.<name> callers work via the re-export: m.\_execute\_processing (tests/test\_api\_cloud\_dispatch.py:151-704, tests/test\_async\_jobs.py:173,207,226 ? including the positional-shim path relying on isinstance(db, \_main.ProcessRequest)), m.\_report\_config\_for\_input (tests/test\_api\_endpoints.py:833,839), and 'from backend.main import ProcessRequest' (tests/test\_locale\_analytics.py:12 ? ProcessRequest is retained, not moved). Object-attribute patches (m.storage.\*, m.registry.\*, m.segmenter\_registry.\*) mutate the shared imported objects and reach orchestration regardless. Empirical run in the worktree: pytest over test\_api\_endpoints, test\_async\_jobs, test\_api\_cloud\_dispatch, test\_api\_annotations, test\_api\_assets, test\_job\_worker\_module\_seam, test\_job\_worker\_loop, test\_main\_module\_budget, test\_edge\_auth, test\_locale\_analytics = 162 passed, 1 skipped. Caveat: the worktree was actively changing during review (orchestration.py mtime 14:54:54, main.py 14:45:27); findings are pinned to that state ? re-verify at commit time.\"}, {\"severity\":\"nit\", \"evidence\":\"wt-docs/backend/api/job\_worker.py:114,122; wt-docs/backend/main.py:306-316,473,643,872,1017,1170,1177,1618,1628; test run: 162 passed, 1 skipped in 47.17s\", \"verdict\":{\"real\":true, \"reasoning\":\"Independently reproduced every element of the reviewer's claim in the worktree (read-only). (a) Empirical run: `python -m pytest` over the exact 10-file subset (test\_api\_endpoints, test\_async\_jobs, test\_api\_cloud\_dispatch, test\_api\_annotations, test\_api\_assets, test\_job\_worker\_module\_seam, test\_job\_worker\_loop, test\_main\_module\_budget, test\_edge\_auth, test\_locale\_analytics) = 162 passed, 1 skipped in 45.76s ? identical counts to the claimed 162/1. (b) Line-number evidence all exact: re-export block at backend/main.py:306-316 (from backend.orchestration import of all 10 names, noqa F401); retained consumers at main.py:473 (\_cloud\_available), 643/872/1017 (\_remote\_input\_size\_bytes), 1170/1177 (\_resolve\_compile/\_CompileError), 1618/1628 (\_finalize\_reingest/\_report\_config\_for\_input); job\_worker.py:114 (\_main.\_execute\_compile) and :122 (\_main.\_execute\_processing) with call-time `import backend.main as \_main` at :105. (c) Seam reasoning verified adversarially: orchestration.py never calls \_remote\_input\_size\_bytes internally (only i ... (truncated 30616 chars, full result in C:\\Users\\avidu\\AppData\\Local\\Temp\\claude\\C--Users-avidu-Projects-badminton-highlight-indexer\\accd47af-95a3-46a7-9b51-b3eb5066a777\\tasks\\w3nq965io.output)</result>

refactor(P23): extract orchestration.py from main.py + anti-bloat ratchet

Re-cut of #390 against current master (the original went stale: its extracted
copies predate the #417/#424-#427 rewrites). Step 1 of the god-module split.

- NEW backend/orchestration.py: the 10 processing/compile orchestration members
moved verbatim from backend/main.py (\_finalize\_reingest, \_report\_config\_for\_input,
\_ingest\_remote\_segments, \_cloud\_available, \_maybe\_dispatch\_remote,
\_execute\_processing, \_remote\_input\_size\_bytes, \_CompileError, \_resolve\_compile,
\_execute\_compile). main.py: 2360 -> 1703 lines (-28%).
- backend.main re-exports all 10 names (same convention as the job\_worker
extraction), so `import backend.main as m; m.\_execute\_processing(...)` the
worker's call-time `\_main.\_execute\_compile(...)` seam, and every
monkeypatch.setattr(backend.main, ...) keep working unchanged.
- Machine-verified AST-IDENTITY vs master for all 10 moved members modulo 7
enumerated mechanical seam deltas (call-time `\_main.<name>` routing for the
rebind-patchable seams: global\_config, db\_instance, ProcessRequest,
compute\_video\_id, emit\_indexer\_report, VideoCompiler; + a ProcessRequest
string forward-ref), and for all 51 RETAINED main.py defs/classes.
- NEW tests/test\_main\_module\_budget.py (anti-bloat ratchet): main.py line

budget 1750 (tighten as later splits land), @app-route ceiling 18 (new endpoints go in backend/api/), re-export identity contract.

- backend.orchestration is NOT mypy-quarantined (2 targeted type-ignores):
  - ~657 lines leave the quarantined backend.main surface and are now type-checked.

Verification: full suite 1579 passed / 13 skipped, coverage 85.16% (floor 70);  
ruff + format clean; mypy clean (142 files, --no-incremental); AST-identity report ALL GREEN on the final state; adversarial 3-lens review (seams / imports / behavior) - seam checks empirically confirmed on 162 targeted tests, no confirmed code defects.

Umbrella tracker P23 (docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md); next steps (CLI extraction, route moves) continue under P23/P24.

### 319. assistant (2026-07-02T09:38:57.449Z)

## Summary

**\*\*Step 1 of the `main.py` god-module split\*\*** (umbrella Remediation-tracker **\*\*P23\*\***; owner-approved re-cut of **\*\*#390\*\***, which was closed ? its extracted copies predated the #417/#424?#427 rewrites of the very functions it moved). Extracts the **\*\*processing + compile orchestration\*\*** into a new `backend/orchestration.py`, taking `main.py` from **\*\*2360 ? 1703 lines (?28%)\*\***, and adds an **\*\*anti-bloat ratchet\*\*** so the god-module cannot silently regrow.

## What moved ? `backend/orchestration.py` (10 members, verbatim)

Member	Purpose
--- ---	
`_finalize_reingest`	destroy-AFTER-confirm segment commit
`_report_config_for_input`	keeps remote-input reports out of disposable scratch (#427)
`_ingest_remote_segments`	cloud job `intervals.csv` ? DB rows
`_cloud_available`	can this box dispatch a cloud job?
`_maybe_dispatch_remote`	Cloud Run dispatch + ingest (default-OFF; incl. #417 salvage path)
`_execute_processing`	full hash ? validate ? segment ? report pipeline (incl. #424 idempotency)
`_remote_input_size_bytes`	best-effort remote stat for the free-space guard
`_CompileError` / `_resolve_compile`	shared submit/worker compile resolution
`_execute_compile`	worker handler for a compile job (incl. #426/#427 behavior)

`backend.main` **\*\*re-exports all 10 names\*\*** ? same convention as the `backend.api.job\_worker` extraction ? so `import backend.main as m; m.\_execute\_processing(...)` , the worker's call-time

`\_main.\_execute\_compile(...)` seam, and every `monkeypatch.setattr(backend.main, ...)` in the suite keep working unchanged.

## Proof this is behavior-preserving

Machine-verified (scripted AST comparison vs `origin/master`, run on the final commit state):

- ? All **\*\*10 moved members are AST-identical\*\*** to master after normalizing the **\*\*7 enumerated mechanical deltas\*\*** below.
- ? All **\*\*51 retained\*\*** top-level defs/classes in `main.py` are **\*\*AST-identical to master\*\*** (only imports/re-exports changed around them).
- ? Name-resolution scan: no unresolved names in the new module.

### The 7 enumerated deltas (all seam mechanics; zero logic change)

Call-time `\_main.<name>` resolution is *semantically identical* to master (master's bare names resolved through `backend.main`'s module dict at call time; `\_main.<name>` reads the same dict)

? it exists so the names tests **\*\*rebind on `backend.main`\*\*** still intercept the moved code:

1. `\_execute\_processing`: inserted `import backend.main as \_main` (call-time seam import).
2. `\_execute\_processing`: `global\_config` / `db\_instance` fallbacks ? `\_main.global\_config` / `\_main.db\_instance`.
3. `\_execute\_processing`: the two `isinstance(..., ProcessRequest)` shim checks ? `\_main.ProcessRequest`.
4. `\_execute\_processing`: `compute\_video\_id` ? `\_main.compute\_video\_id` (tests rebind it: `test\_api\_endpoints.py:817`).
5. `\_execute\_processing`: `emit\_indexer\_report` ? `\_main.emit\_indexer\_report` (rebound at `:782`).
6. `\_execute\_compile`: inserted `import backend.main as \_main`; `VideoCompiler` ? `\_main.VideoCompiler` (rebound at `:411,455,486,531,575`).
7. `\_maybe\_dispatch\_remote`: `req: ProcessRequest` ? string forward-ref (runtime import would be circular; `TYPE\_CHECKING` import for mypy).

Plus two `# type: ignore[...]` comments (AST-invisible) ? which let `backend.orchestration` stay **\*\*out of the mypy quarantine\*\***: ~657 lines leave the quarantined `backend.main` surface and are now type-checked (a P24 ratchet down-payment).

## Anti-bloat ratchet (new `tests/test\_main\_module\_budget.py`)

- `main.py` grew 1448 ? 2360 in a week because every endpoint PR landed in it. Now CI-enforced:
- **\*\*Line budget 1750\*\*** ? later splits must **TIGHTEN** it in the same PR; growth past it fails with a message pointing to the extraction convention.
  - **\*\*Route ceiling 18\*\*** ? new endpoints go in `backend/api/` (pattern: `backend/api/uploads.py`), not `main.py`.
  - **\*\*Re-export contract\*\*** ? the 10 names must remain the *same objects* on `backend.main` and `backend.orchestration` (the monkeypatch seam is load-bearing).

## Verification

- Full suite: **\*\*1579 passed, 13 skipped\*\***; coverage **\*\*85.16%\*\*** vs floor 70 (no regression).
- `ruff check` + `ruff format --check`: clean. `mypy backend training --no-incremental`: **\*\*clean, 142 files\*\*** (with `google-cloud-storage` installed).
- AST-identity report: **\*\*ALL GREEN\*\*** on the exact commit state.
- **\*\*Adversarial 3-lens review\*\*** (seams / imports / behavior) before commit: seam fidelity **\*\*empirically confirmed\*\*** ? every `monkeypatch.setattr(backend.main, ...)` target, the job-worker call-time seams, retained-route call sites, and direct `m.<name>` callers verified at cited lines; 162 targeted tests green. The review also *caught* the initial version's missing seam routing for `VideoCompiler`/`emit\_indexer\_report`/`compute\_video\_id` (6 test failures) ? fixed via deltas 4?6 and re-verified. Circular imports, the `python -m backend.main` double-module trap, packaging, and removed-import safety verified clean. The logger-name change for moved code (`backend.main` ? `backend.orchestration`) was checked against every caplog assertion ? none assert on logger names; suite green.
- Umbrella tracker P23 row updated in a follow-up commit on this branch.

## Follow-ups (tracked, NOT in this PR)

- **\*\*P23 step 2 / P24:\*\*** extract the CLI (`main()`), ~500 lines) and continue route/helper moves;

tighten the ratchet budget each time; lift remaining quarantine.

```
802 ## Changelog
803
804 - `2026-07-02` ? **Umbrella consolidation.** Made this the single living code-audit doc:
folded in the standalone `KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md` as the *Remediation tracker
(live)* section (archived the standalone plan), absorbed the prior
`CODE_CLEANUP_AUDIT_2026-06-24` (archived) and the already-archived June-2026 hardening sweep
into *Prior audits (absorbed)*, removed the three redundant top-level hardening pointer-stubs
(DOC_STATUS §4 finding #4 resolved), and repointed inbound links. Findings section unchanged.
805 - `2026-07-02` ? **Wave 2 P6/P7 merged + audit-batch PR dispositions.** Took over and
merged `#416` (P6 ? GDrive stream/safe-put, R1-18) and `#417` (P7 ? Cloud Run poll-timeout
salvage, R1-21) after refreshing both onto current master and re-running CI green. Closed the
superseded early-batch PRs `#414/#415/#418/#419` (already on master via #421/#422/#425) and
`#420` (4/7 files superseded by #421/#423; residuals carried in #429).
806 - `2026-07-02` ? **Wave 1 complete (P1?P4) + P5.** `#428` (gcs mpy, R1-27), `#424`
(`/api/process` idempotency, #340/#330), `#425` (`/api/source` cache), `#426` (ffmpeg timeouts),
`#427` (scratch retention).
807 - `2026-07-02` ? Plan created from the multi-repo audit and post-sync reconciliation
(`#423`); added completed-item ledger, pushback, wave plan, verification policy, and screencast
requirement.
808
```

### 329. assistant (2026-07-02T09:40:32.742Z)

**\*\*Status update\*\*** (continuing from before):

**\*\*PR [#431](https://github.com/Khelsutra/badminton-highlight-indexer/pull/431) is now open\*\*** ?  
`refactor(P23): extract orchestration.py from main.py (god-module split, step 1) + anti-bloat  
ratchet`. CI is running; I'll squash-merge on green per the pure-refactor merge agreement.

What's in it, end to end:

- **\*\*`main.py` 2360 ? 1703 lines (?28%)\*\*** ? the 10 processing/compile orchestration members moved to `backend/orchestration.py`, machine-verified **\*\*AST-identical\*\*** to master modulo 7 enumerated call-time-seam deltas; all 51 retained defs byte-equivalent; every `backend.main` monkeypatch/worker seam preserved via re-exports (job\_worker convention).
- **\*\*Anti-bloat ratchet\*\*** (your "doesn't bloat up" requirement, now CI-enforced): line budget 1750 (each later split must tighten it), route ceiling 18 (new endpoints must go in

```
`backend/api/`), re-export identity contract.
- **Verification:** full suite 1579? / coverage 85.16% (floor 70), mypy clean 142 files (new
module *not* quarantined ? 657 lines newly type-checked), ruff clean, plus a pre-commit
adversarial 3-lens review that **earned its keep**: it independently confirmed the seam design,
and the first full-suite run caught 6 tests broken by unrouted seams
(`VideoCompiler`/`emit_indexer_report`/`compute_video_id`) ? fixed and re-verified green.
- The umbrella tracker P23 row + changelog updated in-branch with the real PR number.

Next after #431 merges: step 2 ? extract the CLI block (`main()` + helpers, ~500 lines ?
target `main.py` ? 1200, ratchet tightened), same AST-identity + review discipline; then refresh
the memory handoff. I'll report back when #431 is merged.
```

### 335. assistant (2026-07-02T09:40:49.124Z)

The watch fired before GitHub registered the check runs for the just-pushed tracker commit. Let  
me re-query and wait for them properly.

### 336. user (2026-07-02T09:40:51.822Z)

Command running in background with ID: b58prpfc. Output is being written to:  
C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-  
indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\tasks\b58prpfc.output. You will be notified when  
it completes. To check interim output, use Read on that file path.

### 337. assistant (2026-07-02T09:41:01.479Z)

#431's CI is being watched in the background ? I'll merge it on green, then move to step 2 (CLI extraction) off the post-merge master. Waiting for the CI signal.

### 347. assistant (2026-07-02T09:44:48.299Z)

main.py is now 1703. The remaining big chunk is `main()`+CLI (1205?1691, ~490 lines) ? but that's the **\*\*delicate\*\*** part (it mutates `global\_config`/`db\_instance`/`\_instance\_lock` and is the entry point + double-module trap). Per your "very careful, it's the heart" steer, I'll **\*\*not\*\*** move `main()` wholesale in one risky step.

Step 2 = the **\*\*pure server/network bootstrap helpers\*\*** (`\_cors\_origins\_from\_env`, `\_allowed\_hosts\_from\_env`, `\_resolve\_bind\_host`, `\_port\_is\_free`, `\_find\_free\_port`, `\_resolve\_app\_port`, `\_open\_browser\_when\_ready`, `\_bundled\_ui\_version`) ? zero global coupling, well-tested. Let me verify that coupling claim and how tests patch them before extracting.

### 348. user (2026-07-02T09:44:55.387Z)

=== tests patching/using these names on backend.main ===

```

### 349. assistant (2026-07-02T09:45:26.649Z)

No tests patch these on `backend.main` (clean), but they're **interleaved** with module-level `app.add\_middleware`/`mount` statements and may depend on module constants. Let me inspect the two file-touching helpers' bodies + constants to judge how clean the move is.

### 350. user (2026-07-02T09:45:27.889Z)

### 351. assistant (2026-07-02T09:46:11.000Z)

`\_bundled\_ui\_version` is coupled to the module UI constants (`\_BUNDLED\_UI\_DIR`) shared with the mounts/`serve\_index` route ? so it stays. The clean movers are the \*\*7 pure network/launcher helpers\*\*. Let me read their exact boundaries and check for any `logger`/main-name dependencies.

### 352. user (2026-07-02T09:46:14.025Z)

### 353. assistant (2026-07-02T09:46:39.418Z)

The 7 helpers are pure (stdlib + one `AppConfig` type hint), no `logger`, no globals, no main constants ? clean. \*\*One ordering subtlety\*\* (the "careful" bit):  
`\_cors\_origins\_from\_env`/`\_allowed\_hosts\_from\_env` are called at *import time* by module-level  
`app.add\_middleware(...)` , so the re-import must sit *above* `app = FastAPI()` , not in the  
late re-export block. Let me confirm test usage, then extract with that ordering.

### 354. user (2026-07-02T09:46:44.098Z)

```

=== tests referencing the 7 helpers (call via m. / import from backend.main) ===
 3 m._allowed_hosts_from_env
 3 m._cors_origins_from_env
 1 m._find_free_port
 3 m._open_browser_when_ready
 3 m._port_is_free
 2 m._resolve_app_port
 5 m._resolve_bind_host

```

```

=== exact end line of _open_browser_when_ready + line before 'app = FastAPI(' ===
86:app = FastAPI(title="Sports Highlight Indexer API")
84:from backend.utils.single_instance import acquire_lock # P0e: one instance per database

```

### 355. assistant (2026-07-02T09:47:08.981Z)

All 7 are pure and called via `m.<name>` (24 test usages, no `setattr` patching) ? a clean move, no seam rewrites needed, just the import placed above `app = FastAPI()` (line 86). Writing the scripted extractor + a matching AST-identity verifier.

### 356. assistant (2026-07-02T09:47:29.094Z)

```
"""P24 step: extract the pure server/network bootstrap helpers from backend/main.py into
backend/server_runtime.py. Pure functions, no module globals, no `app`, not monkeypatched
-> a plain move + re-import (NOT the call-time seam pattern). The re-import is placed ABOVE
`app = FastAPI(...)` because module-level add_middleware(...) calls two of these at import time.

### 368. assistant (2026-07-02T09:49:30.092Z)

The failures are a seam I mis-classified: 3 launcher tests patch `m.webbrowser` (the module-level attr the moved function calls), which no longer lives on `backend.main`. The function genuinely moved, so its unit tests should patch `backend.server\_runtime`. Let me see all `m.webbrowser` uses + the test's imports to repoint them minimally.

### 369. user (2026-07-02T09:49:43.872Z)

### 370. assistant (2026-07-02T09:50:02.379Z)

Minimal, correct fix: those 3 tests patch the `webbrowser` module attribute the moved function uses ? repoint them to `backend.server\_runtime` (where the function now lives). Adding the import + repointing.

#### 379. assistant (2026-07-02T09:51:03.142Z)

That failure is `app.state.config` missing on a TestClient hit ? unrelated to the helper move on its face. Let me confirm it's not a regression I introduced by checking the test's client setup and whether it fails identically on clean master.

#### 380. user (2026-07-02T09:51:07.431Z)

```

=== the loopback test + how it builds its client ===
5:pytest.importorskip("httpx") # TestClient needs httpx

### 383. assistant (2026-07-02T09:51:37.439Z)

That autouse fixture only clears env ? it doesn't set `app.state.config`. So  
`test\_loopback\_host\_header\_is\_accepted` relies on **another test/configtest** having called  
`create\_app` first (a pre-existing test-ordering dependency, not my change ? I didn't touch  
`app.state` setup). The authoritative check is the full suite. Let me confirm the ordering  
hypothesis quickly and run the real gate (mypy + full suite).

### 384. user (2026-07-02T09:51:48.272Z)

```

=== does test_bind_and_host.py FAIL ALONE on origin/master too? (proves pre-existing ordering)
===
FAILED tests/test_bind_and_host.py::test_loopback_host_header_is_accepted - A...
1 failed in 3.17s
=== conftest app.state / create_app setup ===

```

### 385. assistant (2026-07-02T09:51:57.990Z)

Confirmed: `test\_loopback\_host\_header\_is\_accepted` fails **in isolation on clean master too** ?  
it's a pre-existing test-ordering dependency (needs an earlier test's `create\_app`), not my  
regression. Let me verify my changes are restored, then run the authoritative full suite + mypy.

### 386. user (2026-07-02T09:52:01.390Z)

?? backend/server_runtime.py
server_runtime.py present
```

AST-IDENTITY: ALL GREEN

### 387. assistant (2026-07-02T09:52:04.736Z)

Working tree restored, AST identity green. Now the authoritative gate ? mypy + full suite with coverage.

### 388. user (2026-07-02T09:52:07.280Z)

Command running in background with ID: b6gij7hpo. Output is being written to:  
C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\accd47af-95a3-46a7-9b51-b3eb5066a777\tasks\b6gij7hpo.output. You will be notified when it completes. To check interim output, use Read on that file path.

### 389. assistant (2026-07-02T09:52:22.413Z)

Full suite running. Let me draft the commit + PR artifacts while it completes (proportionate to a small pure move ? the suite is the real adversary here, and it already caught + I fixed the one seam).

### 390. assistant (2026-07-02T09:52:32.270Z)

refactor(P23 step 2): extract server\_runtime.py from main.py + tighten ratchet

Continues the main.py god-module split (umbrella Remediation-tracker P23; follows the #431 orchestration extraction). Moves the pure server/network bootstrap helpers to a new backend/server\_runtime.py: main.py 1703 -> 1623 lines.

- NEW backend/server\_runtime.py: the CORS/host-allowlist config helpers (`_cors_origins_from_env`, `_allowed_hosts_from_env`) and the ``indexer --app`` launcher helpers (`_resolve_bind_host`, `_port_is_free`, `_find_free_port`, `_resolve_app_port`, `_open_browser_when_ready`). Pure, stateless, no module globals, no ``app``, no `backend.main` import.
- main.py re-imports them ABOVE ``app = FastAPI(...)`` (the module-level `add_middleware` calls `_cors_origins_from_env` / `_allowed_hosts_from_env` at import time) and re-exports them, so ``import backend.main as m; m._resolve_bind_host(...)`` (24 test call sites) keeps working. Dropped the now-unused ``socket`` / ``webbrowser`` imports from main.py.
- Machine-verified AST-IDENTICAL: all 7 moved helpers exactly identical to master (pure move, no deltas); all 44 retained main.py defs/classes identical.
- Ratchet tightened: `MAIN_LINE_BUDGET` 1750 -> 1650 (tests/test\_main\_module\_budget.py), with `server_runtime` added to the "where new code goes" convention.
- tests/test\_app\_launcher.py: 3 unit tests repointed their ``webbrowser`` module-attr patch from `backend.main` to `backend.server_runtime` (the function moved there) ? no production behavior change; caught by the full suite pre-commit.

Verification: full suite <RESULT> / coverage <COV> (floor 70); ruff + format clean; mypy clean (`--no-incremental`); AST-identity ALL GREEN. (The pre-existing test-ordering dependency of `test_loopback_host_header_is_accepted` ? it needs an earlier `create_app` ? fails in isolation on master too; green in the full suite.)

### 392. assistant (2026-07-02T09:52:47.291Z)

**\*\*Status while the suite runs\*\*** ? here's the full arc of what's landed and what's in flight:

**\*\*Merged:\*\***

- [#430](https://github.com/Khelsutra/badminton-highlight-indexer/pull/430) ? umbrella audit-doc consolidation.

- [#431](https://github.com/Khelsutra/badminton-highlight-indexer/pull/431) ? **\*\*P23 step 1\*\***: `main.py` 2360?1703, orchestration extracted to `backend/orchestration.py`, anti-bloat ratchet added.

**\*\*In flight ? P23 step 2\*\*** (`refactor/p24-cli-extract` branch, not yet pushed):

- Extracted the 7 pure server/network-bootstrap helpers ? new `backend/server\_runtime.py`.

**\*\*`main.py` 1703 ? 1623.\*\***

- AST-identical (pure move, machine-verified), ruff/format clean, re-export identity confirmed.

- **\*\*Ratchet tightened\*\*** 1750 ? 1650 (the "tighten as splits land" mechanism working as designed).

- The full suite already earned its keep: it caught 3 launcher tests patching `m.webbrowser` (the attr moved with the function) ? repointed to `backend.server\_runtime`, fixed. Also confirmed a scary-looking `test\_bind\_and\_host` failure is a **\*\*pre-existing test-ordering quirk\*\*** (fails in isolation on clean master too), not my regression.

I deliberately did **\*\*not\*\*** touch `main()` itself yet ? it mutates `global\_config`/`db\_instance`/`\_instance\_lock`, is the console entry point, and has the `python -m` double-module trap; moving it needs the careful global-mutation-aware treatment and is the right next increment, not something to rush into this PR.

Once the mypy + full-suite gate returns green I'll commit, push, open the step-2 PR, merge on green, update the tracker/memory, and lay out the remaining roadmap (the delicate `main()` extraction + route?`APIRouter` conversion) for your go-ahead.

```

### 398. assistant (2026-07-02T09:55:48.403Z)

Pushed (`684cac8`). Now let me fold the tracker update into this PR ? update the P23 row + R1-01 + changelog in the umbrella doc.

### 399. user (2026-07-02T09:55:51.387Z)

```
667:| `R1-01` main.py line count | Split started (P23 step 1) | `backend/main.py` reduced **2360
? 1703 lines** by `#431` (`backend/orchestration.py` extraction, `#390` re-cut) with a CI
anti-bloat ratchet (line budget + route ceiling, `tests/test_main_module_budget.py`).
Remaining: CLI extraction + route moves (P23 step 2 / P24). |
804:- `2026-07-02` ? **P23 step 1: god-module split started (`#431`).** Closed stale `#390` (its
extracted copies predated the #417/#424?#427 rewrites) and re-cut fresh:
`backend/orchestration.py` (10 processing/compile orchestration members, machine-verified AST-
identical modulo 7 enumerated call-time-seam deltas; `backend.main` re-exports keep every
monkeypatch/worker seam working). `main.py` **2360 ? 1703 lines**. Added the **anti-bloat
ratchet** `tests/test_main_module_budget.py` (line budget 1750, tightened by later splits .
route ceiling 18, new endpoints ? `backend/api/` . re-export identity contract).
`backend.orchestration` is NOT mypy-quarantined (~657 lines newly type-checked; P24 down-
payment). Full suite 1579?/cov 85.16%, mypy clean, adversarial 3-lens review pre-commit (it
caught the initial missing seam routing for
`VideoCompiler`/`emit_indexer_report`/`compute_video_id` ? fixed + re-verified).
```

### 400. user (2026-07-02T09:55:58.019Z)

```
762 | P23 | 5 | Close stale/conflicting `#390`; re-cut first `main.py` orchestration split
from fresh `origin/master`. (Absorbs prior audit CODE_CLEANUP `P10` / `D1`.) **Step 1 done:**
`#390` closed with disposition; `backend/orchestration.py` extracted (10 members, AST-identity-
verified, seams preserved) + **anti-bloat ratchet** (`tests/test_main_module_budget.py`: line
budget 1750 . route ceiling 18 . re-export contract); `main.py` 2360?1703. Remaining steps (CLI
extraction, route moves) continue here + P24. | engine | P1-P8 settle | No | Done (step 1) |
#431 |
763 | P24 | 5 | Remove remaining `backend.main` shim cycles and lift mypy quarantine where
type-clean. | engine | P23 | No | Todo | ? |
764 | P25 | 5 | Split `Database` behind facade by domain only when the migration/correctness
wave is stable. | engine | P23 | No | Todo | ? |
```

### Summary

**\*\*P23 step 2\*\*** of the ``main.py`` god-module split (follows #431). Moves the **\*\*pure server/network bootstrap helpers\*\*** into a new ``backend/server_runtime.py``: **\*\*`main.py` 1703 ? 1623 lines\*\***.

Deliberately **\*\*does not\*\*** touch ``main()`` / the CLI yet ? that block mutates the ``global_config`` / ``db_instance`` / ``_instance_lock`` module globals, is the ``indexer`` console entry point, and carries the ``python -m backend.main`` double-module trap; it needs a global-mutation-aware extraction and is the next increment (P24), not this PR.

### What moved ? ``backend/server_runtime.py`` (7 pure helpers)

- ``_cors_origins_from_env``, ``_allowed_hosts_from_env`` ? CORS / DNS-rebinding host-allowlist config (read from env; zero FS I/O).
- ``_resolve_bind_host`` ? bind-address precedence (``--host`` > env > edge-auth-widen > loopback).
- ``_port_is_free``, ``_find_free_port``, ``_resolve_app_port`` ? ``indexer --app`` free-port fallback.
- ``_open_browser_when_ready`` ? poll health ? open browser (no-op under ``RALLY_NO_BROWSER``).

Pure, stateless, no module globals, no ``app``, no ``backend.main`` import.

### Behavior-preserving proof

- **\*\*Machine-verified AST-IDENTICAL\*\*** (a *\*pure\** move ? no deltas): all 7 moved helpers exactly identical to master; all 44 retained ``main.py`` defs/classes identical.
- ``main.py`` re-imports them **\*\*above** ``app = FastAPI(...)`` (the module-level ``add_middleware(...)`` calls ``_cors_origins_from_env`` / ``_allowed_hosts_from_env`` at import time) and **\*\*re-exports\*\*** them, so ``import backend.main as m; m._resolve_bind_host(...)`` (24 test call sites) keeps working. Removed the now-unused ``socket`` / ``webbrowser`` imports from ``main.py``.
- ``tests/test_app_launcher.py``: 3 unit tests patched the ``webbrowser`` **\*\*module attribute\*\*** the moved function uses (``m.webbrowser``); repointed to ``backend.server_runtime`` (where the function now lives) ? **\*\*no production behavior change\*\***. Caught by the full suite pre-commit and fixed.

### Anti-bloat ratchet tightened

``tests/test_main_module_budget.py``: ``MAIN_LINE_BUDGET`` **\*\*1750 ? 1650\*\***, and ``server_runtime`` added to the "where new code goes" convention (server/launcher helpers ? ``backend/server_runtime.py``). This is the ratchet's designed behavior ? each split tightens the ceiling.

### Verification

- Full suite: **\*\*1579 passed, 13 skipped\*\***; coverage **\*\*85.16%\*\*** vs floor 70. ``ruff`` + ``ruff format --check`` clean. ``mypy backend training --no-incremental`` clean. AST-identity report ALL GREEN.

- Note: `test\_bind\_and\_host.py::test\_loopback\_host\_header\_is\_accepted` has a **pre-existing** test-ordering dependency (needs an earlier `create\_app`) ? it fails **in isolation on clean master too** and passes in the full suite; unaffected by this change.

- Umbrella tracker P23 row + changelog updated in-branch.

## Roadmap (tracked, NOT in this PR)

- **P24 / next:** the delicate `main()` + CLI extraction (own the `global` writes via a thin `main.py` shim that keeps the globals authoritative; preserve the `python -m` trap), then convert route handlers to an `APIRouter` module. Each behind the same AST-identity + full-suite + review discipline, tightening the ratchet each time.

11
12 > **Scope of this file = LIVE only:** the current handoff + *today's* checkpoints + open
PRs/decisions. Keep it read-first-short (?1 page). Older checkpoints are archived in [[current-
state-archive]] ? when today's checkpoints age out (next clean-slate day), move them there,
don't let them pile up here.
13
14 ***? 2026-07-02 ? P16 KHELSUTRA INGEST RESUME MERGED; PAUSE HERE.** Khelsutra
[#144](https://github.com/avidullu/khelsutra/pull/144) merged to `master` as `b5c7861` (`fix
ingest job refresh resume (#144)`). Active ingest jobs now persist to `?job=` + `localStorage`,
refreshes resume polling without re-posting `/api/process`, retryable poll errors/timeouts keep
the resume state, and terminal success/failure/cancel clears it. The SPA now shows
elapsed/heartbeat/reload-hint status while polling. Verification: focused Vitest `86 passed`;
`web` typecheck, coverage, build, E2E, CI-mode E2E all passed; coverage stayed above floors
(`94.09%` statements, `87.64%` branches, `88.40%` functions, `94.09%` lines); `site`
tests/layout/render/all passed; GitHub checks (`site`, `layout`, `web`, Workers build) all
green. Resume screencast: `C:\Users\avidu\Projects\khelsutra-guru\khelsutra-
screencast_raw\resume.pw.mjs-Ingest-job-s-4c92a-sh-via-job-and-localStorage\video.webm`. Owner
asked to pause after the current fix was merged, so pause here.
```

#### 419. assistant (2026-07-02T10:01:46.797Z)

A sibling session updated `current-state.md` (top is now a khelsutra P16 block). I'll  
\*\*prepend\*\* my checkpoint above it ? additive, no clobber ? per the shared-file discipline.

#### 420. user (2026-07-02T10:02:04.698Z)

The file c:\Users\avidu\claude\projects\c--Users-avidu-Projects-khelsutra-guru\memory\current-state.md has been updated successfully. (file state is current in your context ? no need to Read it back)

#### 421. assistant (2026-07-02T10:02:11.780Z)

Now the session-handoff "You are here". Let me read its current top (may also have shifted under a sibling).

#### 422. user (2026-07-02T10:02:12.941Z)

```

10 # Session handoff ? badminton-highlight-indexer (rename PENDING) + siblings: sports-
data-collector, rally-annotator, sports-obsreport
11
12 **Last updated:** 2026-07-02 (**health-remediation P16 checkpoint** ? khelsutra #144
merged; engine tracker left untouched per no-engine-edits instruction). Older serving/alpha and
review-automation history remains below for background, but the active pickup is the 2026-07-02
health plan section.
13
14 > **Read order:** this file ? [[current-state]] top ? `badminton-highlight-
indexer/docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md` ? archived/older
`docs/KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md` context if needed ? engine PR #423 ?
`docs/NEXT_STEPS.md` ? `docs/DOC_STATUS.md`.
15
16 ## ? You are here (2026-07-02)
17 **Latest checkpoint:** owner asked to resync allowed repos, avoid edits to `badminton-
highlight-indexer`, keep coverage non-regressing, update the pending list, and pause after the
current fix merged. Khelsutra [#144](https://github.com/avidullu/khelsutra/pull/144) merged to
`master` as `b5c7861` (`fix ingest job refresh resume (#144)`). Active ingest jobs now persist
to `?job=` + `localStorage`, refreshes resume polling without re-posting `/api/process`,
retryable poll errors/timeouts keep resume state, and terminal success/failure/cancel clears it.
UI now shows elapsed/heartbeat/reload-hint status. Verification: focused Vitest `86 passed`; web
typecheck/coverage/build/E2E/CI-mode E2E passed; coverage `94.09%` statements, `87.64%`
branches, `88.40%` functions, `94.09%` lines (above floors); site tests/layout/render/all
passed; GitHub checks all green. Resume screencast: `C:\Users\avidu\Projects\khelsutra-
guru\khelsutra-screencast_raw\resume.pw.mjs-Ingest-job-s-4c92a-sh-via-job-and-
localStorage\video.webm`. **Pause here per owner request.**
18
19 **Allowed-repo heads after final sync:** `khelsutra` `b5c7861` clean apart from ignored
build artifacts; `rally-annotator` `ef9e088` clean; `sports-data-collector` `01ceda9` with the
pre-existing dirty `.gitignore` artifact-ignore hunk preserved. `badminton-highlight-indexer`
was not modified after the no-engine-edits instruction; last read-only sync put the live tracker
in `docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md`, so tracker deltas are recorded
here/current-state instead of editing the engine repo.
20
21 **Completed health rows, ground truth:** engine P2-P6 merged as #424-#428; sports-data-
collector P12 merged as #58; khelsutra P14 merged as #143 and P16 merged as #144; rally-
annotator P22 merged as #28. Earlier reconciled completions still stand (`R1-19`, `R1-20`, doc
truth-sync, droplet-retired docs, rally DOM/locale fixes, collector `obsreport` pin). `R1-27` is
fixed by engine #428.
22
23 **Pending allowed/non-engine audit rows:** P13 (`sports-data-collector` artifact
`.gitignore` policy/dirty-hunk decision; do not stage without owner direction), P17 (khelsutra
uploaded filename during upload/processing), P18 (hide/replace demo rally grid while a real
upload/process job is active), P19 (sanitize HTML/proxy 5xx bodies surfaced through SPA API
errors), P20 (Web Share API file-share attempt for reels with WhatsApp fallback), P21 (stale SPA
API comment anchors), P27 non-git/GCS metadata backup portion (owner-gated; engine doc update
blocked by no-engine-edits), P28 sports-data/non-git data cleanup (blocked on owner/F: mount).
```

Engine-side rows P8-P10, P15, and P23-P26 stay excluded while the no-engine-edits constraint stands.

24

25       ## ? You are here (2026-06-25)

26       \*\*Review-automation + audit-completion session.\*\* engine `origin/master` = \*\*`0b4f492`\*\*  
· all CI green · \*\*0 open PRs\*\* · no GCP VMs · \*\*PR-review watch loop OFF\*\* (cancelled). NOT  
serving/alpha (that track is the "Earlier" block below, unchanged + owner-gated).

#### 423. assistant (2026-07-02T10:02:35.648Z)

The handoff shows a **concurrent sibling track** (khelsutra P16, operating under a "no-engine-edits" constraint) ? but **this** session was explicitly owner-directed to edit the engine. I'll add my block additively and correct the now-contradictory "Last updated" line so a future reader isn't misled.

4d8ddb4 refactor(P23 step 2): extract server_runtime.py from main.py + tighten ratchet (#432)
main.py:
1621
new modules on master:
orchestration.py: 744
server_runtime.py: 110
```

#### 429. assistant (2026-07-02T10:03:50.782Z)

Engine is at a clean, verified stopping point. Note: `git worktree list` shows a few stale worktrees from **prior/sibling sessions** (`wt-scratch-reclaim`, `wt-source-cache`, `wt-upload-dir`) plus my `wt-docs` ? all in session temp scratch; mine hit a Windows file-lock on removal. They're harmless to the repo (admin entries pointing at temp dirs), so I'm leaving them rather than force-fighting the lock.

**\*\*Where main.py stands on master (`4d8ddb4`):\*\***

```
| | lines |
|---|---:|
| `backend/main.py` | **1621** (was 2360 ? **?31%**) |
| `backend/orchestration.py` (new) | 744 |
| `backend/server_runtime.py` (new) | 110 |
| anti-bloat ratchet | budget **1650** + route ceiling 18 + re-export contract |
```

Everything asked for is done and merged: PR triage (7 PRs dispositioned), umbrella audit doc (#430), #390 closed + re-cut, and two verified split PRs (#431, #432). Tracker + memory updated.

I've **\*\*deliberately stopped before the delicate part\*\***, per your "very carefully ? it's the heart" steer. The remaining decomposition splits into a lower-risk piece and the genuinely-risky entry-point surgery, and I'd like your call on how far to push:

#### **430. user (2026-07-02T12:57:50.675Z)**

Your questions have been answered: "main.py is down to 1621 (?31%) via two clean, verified PRs, with the anti-bloat ratchet locked in. How far should I push the remaining decomposition now?"="Pause here". You can now continue with these answers in mind.

#### **431. assistant (2026-07-02T12:58:16.462Z)**

Paused, per your call. Everything is at a clean, verified checkpoint ? nothing left dangling.

### **Session wrap**

**\*\*PRs (all 7 open engine PRs dispositioned + the follow-ups):\*\***

- **\*\*Merged:\*\*** #416, #417 (taken over, re-verified on fresh CI), #429 (doc reconcile), #430 (umbrella consolidation), #431 + #432 (the split).
- **\*\*Closed with cited comments:\*\*** #414, #415, #418, #419, #420 (superseded), and #390 (stale ? re-cut).

**\*\*Umbrella audit doc:\*\*** `docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md` is now the single living code-audit doc (findings + folded-in *\*Remediation tracker\* P0?P28 + \*Prior audits absorbed\**); the older audits are archived under `docs/archives/past\_projects/`; DOC\_STATUS finding #4 resolved; links clean.

**\*\*main.py god-module:\*\*** **\*\*2360 ? 1621 lines (?31%)\*\*** across two AST-identity-verified, seam-preserving PRs, with a CI **\*\*anti-bloat ratchet\*\*** so it can't quietly regrow. Full suite green (1579? / 85.16% cov), mypy clean throughout.

**\*\*Deliberately not done (your "pause"):\*\*** the delicate entry-point surgery ? extracting `main()`/CLI (global mutation + `indexer` entry point + `python -m` trap) and converting routes to an `APIRouter`. The full plan is recorded as umbrella **\*\*P24\*\*** and in the memory handoff, so it's a clean resume whenever you want it ? just say the word and I'll pick it up with the same discipline (thin `main.py` shim keeping the globals authoritative, AST-identity + full-suite + adversarial review, tighten the ratchet each step).

Engine `master` is at `4d8ddb4` with **\*\*0 open PRs\*\***. Handoff + current-state memory are updated (and now correctly distinguish this engine track from the concurrent khelsutra no-engine-edits track).

#### **432. user (2026-07-02T12:58:19.335Z)**

Resume P23 PR A: read adversarial review workflow (w3nq965io) results; address confirmed findings; then commit (explicit paths: backend/main.py backend/orchestration.py tests/test\_main\_module\_budget.py), push refactor/p23-orchestration-split, open PR, add umbrella-tracker-P23+changelog commit with the real PR number, merge on green CI; then task 5 (CLI extraction) + task 7 (memory).

#### **433. assistant (2026-07-02T12:58:35.578Z)**

This is a stale self-scheduled wakeup ? it's asking me to resume work that's already complete, and part of it (the CLI extraction) is exactly what you just told me to **\*\*pause\*\***. Let me verify the current state rather than blindly re-execute, then stop.

#### 434. user (2026-07-02T12:58:44.485Z)

```
=== PR A (#431) + step 2 (#432) state ===
#431 MERGED merged=2026-07-02T09:43:44Z
#432 MERGED merged=2026-07-02T10:00:37Z
=== open PRs ===
=== master head + main.py size ===
4d8ddb4 refactor(P23 step 2): extract server_runtime.py from main.py + tighten ratchet (#432)
1621
```

#### 435. assistant (2026-07-02T12:58:55.597Z)

Confirmed ? this wakeup is stale. Everything it asks for is already done, and the one remaining piece is the part you paused:

- **\*\*PR A (#431)\*\*** ? the adversarial review (w3nq965io) was read, its confirmed finding (missing seam routing for `VideoCompiler`/`emit\_indexer\_report`/`compute\_video\_id`) was fixed, committed, pushed, PR'd, and **\*\*merged\*\*** (09:43). Tracker + changelog landed with the real PR number.
- **\*\*Step 2 (#432)\*\*** ? server\_runtime extraction, also **\*\*merged\*\*** (10:00).
- **\*\*Task 7 (memory)\*\*** ? done.
- **\*\*Task 5 (CLI extraction)\*\*** ? **\*\*not done**, by your explicit "Pause here" on the delicate `main()`/entry-point surgery. I'm correctly holding it.

Current state: `master` @ `4d8ddb4`, **\*\*0 open PRs\*\***, `main.py` at **\*\*1621\*\*** lines. Nothing to redo, nothing new to commit.

I'm not re-running any of that and not rescheduling ? the loop ends here. The P24 roadmap (CLI/`main()` extraction + route?`APIRouter`) is captured in the umbrella tracker and the memory handoff, ready to resume whenever you give the go-ahead.
