Transcript

1. request-prompt

You are an AI programming assistant that is specialized for usage of command-line tools developers use to build software.

I'm working on software in the given following languages. Please list the names of common command-line tools I might use to build and test my software.

Do NOT list tools that don't run my code, such as those used only for linting. For example, if I ask for JavaScript, the list should include tools like node, npx, and mocha, but not eslint.

Be thorough! Try to give a list of *at least* 10 such tools.

Print these tools out as a list, separated by commas. Do NOT print any additional explanation or context.

Example

User:

```
- python  
- rust
```

Response:

```
- python  
- pip  
- cargo  
- rustc
```
