Source Extractor

Research question: "RESEARCH GOAL: Produce a decision-grade shortlist of data-annotation VENDORS to build "golden set" ground-truth labels for a badminton highlights product, with a STRONG PREFERENCE for vendors based in or operating from Bangalore / India (the founder is in Bangalore and prefers local vendors for easier coordination, possible site visits, and data residency). The annotation task is TEMPORAL VIDEO SEGMENT annotation: marking the [start, end) time ranges of each "rally" in badminton match videos ? i.e. event / temporal-action labeling on video, NOT just image bounding boxes. Output is a simple per-video timestamp list (CSV of start,end). Volume: a constantly growing collection of licensed/owned match videos (no end-user uploads).

For EACH candidate vendor, verify against PRIMARY sources (the vendor's own website/docs) and clearly FLAG anything unverifiable (pricing is usually quote-only):

1. Company & location ? HQ + delivery centers; confirm Bangalore / India presence; flag if purely overseas.
2. Capability ? do they do VIDEO temporal/event annotation (timestamps/segments) or video tracking, or only static image labeling? Sports / media-video experience is a plus.
3. Pricing model ? per video-minute / per task / per annotator-hour / managed-team; any public rates; minimum engagement; willingness to run a small paid PILOT.
4. Data security & compliance ? ISO 27001, SOC 2, GDPR, and especially India's DPDP Act 2023; willingness to sign a DPA; "no training/reuse of our data"; delete-on-delivery; access controls; secure-facility / VDI options.
5. Delivery & integration ? programmatic API for submit/fetch? turnaround SLAs? can they support BOTH a fast tier (hours) and a batch tier (days)?
6. Quality process ? multi-annotator consensus, gold-standard/honeypot checks, inter-annotator-agreement (IAA) reporting, QA review layers.

Candidate vendors to investigate and VERIFY (do not assume ? confirm or correct each, and find others, especially Bangalore-local): iMerit, Playment (and whether TELUS International acquired it), Cogito Tech, Anolytics, Infolks, Learning Spiral, Indika AI, Tech Mahindra, Sama, Scale AI, Labelbox, Toloka, SuperAnnotate, Encord, CloudFactory. Also identify any Bangalore-based startups specializing in video annotation.

Also briefly cover: (a) typical market rate RANGE for temporal video annotation in India vs US/global; and (b) the AUTOMATED-annotation alternative ? could a hosted VLM (e.g. Gemini) or an open model serve as a "fast tier" oracle for surprise regression tests, and what that implies (it must be a DIFFERENT model lineage than the production tool to avoid shared-blind-spot bias).

DELIVERABLE: a ranked shortlist (favoring Bangalore/India) with a comparison table (vendor | location | video-temporal capability | pricing model | security/DPA & DPDP posture | API/turnaround | QA process | pilot availability | verdict), plus 2-3 recommended vendors to approach for a pilot bake-off, and explicit flags on every unverifiable claim (especially pricing). Prioritize accuracy and primary-source citations over breadth."

```
Fetch and extract key claims from this source:
**URL:** https://www.precisebposolution.com/blog/data-labeling-pricing.html
**Title:** Data Labeling Pricing 2026: Cost Per Image, Text & Video (USA vs India)
**Found via:** pricing/market ? temporal video rate range search
```

Task

- 1. Use WebFetch to retrieve the page content.
- 2. Assess source quality: primary research/institution? secondary reporting? blog/opinion? forum? unreliable?
- 3. Extract 2-5 FALSIFIABLE claims that bear on the research question. Each claim must:
 - be a concrete, checkable statement (not vague generalities)
 - include a direct quote from the source as support
 - be rated central/supporting/tangential to the research question
- 4. Note publish date if available.

If the fetch fails or the page is irrelevant/paywalled, return claims: [] and sourceQuality: "unreliable".

Structured output only.

2. assistant (2026-05-30T08:32:39.597Z)

I'll fetch the page content first to assess the source and extract relevant claims.

Video Annotation Pricing

Metric	India Rate	USA Rate
Object Tracking	\$3-\$15 /hour of footage	\$15-\$60 /hour of footage
Frame-by-Frame	\$0.05-\$0.25 /frame	\$0.25-\$1.00+ /frame

Key claim: "Video annotation is significantly more expensive than image annotation because every frame must be labeled and object identities tracked across frames."

India vs USA Comparison

- **Cost differential:** "60-80% lower cost than US-based equivalent" (India)
- **Specific claim:** India-based governed annotation achieves "20-35% total cost of India-based governed annotation vs equivalent US-based annotation"

Annotation Type Pricing (Per-Unit Rates)

Type	India	USA	Complexity
Bounding Box	\$0.02-\$0.10 /object	\$0.10-\$0.50 /object	Low
Semantic Segmentation	\$0.50-\$3.00 /object or \$3-\$15 /complex image	\$3-\$15 /object or \$15-\$100+ /complex image	Very High
Medical Imaging	\$2-\$20 /image	\$20-\$150+ /image	Very High
NLP/Text	\$0.01-\$0.05 /record	\$0.05-\$0.20 /record	Low-Medium

Market Context

- Global market: "\$17B+ Global data labeling market projected by 2030"
- Growth rate: "30-40% YoY" demand increase

Data Annotation Pricing Claims - Precise BPO Solution

Source: Precise BPO Solution website article
Published: March 2026 (Updated April 2026)
Author: Precise BPO Editorial Team
Company Type: India-based ISO 27001-aligned data labeling and BPO vendor (established 2008)

Video Annotation Pricing

- **Video Object Tracking:** "\$3-\$15 /hour of footage" (India); "\$15-\$60 /hour of footage" (USA)
- **Frame-by-Frame Annotation:** "\$0.05-\$0.25 /frame" (India); "\$0.25-\$1.00+ /frame" (USA)

India vs USA Pricing Comparison

- **Overall cost differential:** "60-80% cost saving" of India-based versus USA-based services
- **Total project cost:** India-based annotation with governance achieves "20-35% total cost" versus equivalent USA-based work
- The document emphasizes this comparison applies across standard computer vision and NLP tasks with structured quality control

Specific Rate Ranges by Task Type

Representative examples from pricing table:

- **Bounding Box:** "\$0.02-\$0.10 /object" (India) vs "\$0.10-\$0.50 /object" (USA)
- **Semantic Segmentation:** "\$0.50-\$3.00 /object" (India) vs "\$3-\$15 /object" (USA)
- **NLP/Text Annotation:** "\$0.01-\$0.05 /record" (India) vs "\$0.05-\$0.20 /record" (USA)

Pricing Model

All rates quoted as **per-unit pricing** (per object, record, frame, or hour of footage), not hourly annotator rates.

Data Annotation Pricing Claims Extract

Source: Precise BPO Solution blog post
Publish Date: March 2026 (Updated April 2026)
Author: Precise BPO Editorial Team
Company Type: India-based ISO 27001-aligned data annotation and BPO outsourcing firm

(established 2008)

Video Annotation Pricing

- **Object Tracking:** "\$3-\$15 /hour of footage" (India); "\$15-\$60 /hour of footage" (USA)
- **Frame-by-Frame Annotation:** "\$0.05-\$0.25 /frame" (India); "\$0.25-\$1.00+ /frame" (USA)

India vs USA/Global Pricing Comparison

- **Overall cost differential:** "60-80% lower cost than US-based equivalent" for India-based annotation
- **Total cost advantage:** "20-35% total cost of India-based governed annotation vs equivalent US-based annotation"

Specific Annotation Type Rates (2026)

Task Type	India Range	USA Range
Bounding Box	\$0.02-\$0.10/object	\$0.10-\$0.50/object
Polygon	\$0.05-\$0.50/object	\$0.50-\$3.00/object
Semantic Segmentation	\$0.50-\$3.00/object; \$3-\$15/complex image	\$3-\$15/object; \$15-\$100+/complex image
3D Cuboid	\$0.50-\$2.00/object	\$2.00-\$8.00/object
NLP/Text	\$0.01-\$0.05/record	\$0.05-\$0.20/record
Medical Imaging	\$2-\$20/image	\$20-\$150+/image

Pricing Model Structure

Pricing is per-unit basis: "per object, record, or frame" with volume-based discounts available.

Video Annotation Pricing Extract

Publication: March 2026, Updated April 2026
Author: Precise BPO Editorial Team

Video Annotation Pricing Claims

Per-Hour Rates:

- India: "Video Object Tracking" costs "\$3-\$15 /hour of footage"
- USA: Same service ranges "\$15-\$60 /hour of footage"

Per-Frame Rates:

- India: "Frame-by-Frame Annotation" at "\$0.05-\$0.25 /frame"
- USA: Equivalent work costs "\$0.25-\$1.00+ /frame"

Geographic Comparison

The document asserts that India-based video annotation is "60-80% lower cost than US-based equivalent," positioning video work within the broader annotation cost differential. However, no separate video-specific cost comparison percentages are provided beyond this general geographic range.

Pricing Model

Video annotation is characterized as "significantly more expensive than image annotation because every frame must be labeled and object identities tracked across frames." The document suggests volume optimization strategies like "sparse frame sampling or AI-assisted tracking to reduce manual effort on large video datasets."

No subscription models, minimum volume commitments, or tiered pricing structures for video work are detailed in the content.

13. user (2026-05-30T08:33:14.995Z)

Structured output provided successfully

14. assistant (2026-05-30T08:33:28.548Z)

The fetch succeeded across multiple attempts with consistent data, and I confirmed the publish date and source identity via the raw HTML metadata. The structured output was already accepted. Let me note my final assessment.

The source is a self-published blog post by Precise BPO Solution, an India-based annotation vendor (established 2008) ? this is a vendor marketing/content-marketing piece, not independent research. The pricing figures are vendor-asserted ranges with no methodology or external citation. The video-temporal-specific claims are central to the research question's market-rate sub-question, but should be treated as vendor-blog-grade evidence, not authoritative benchmarks.

Key extractable claims (already submitted):

- Video object tracking: India \$3-\$15/hour of footage vs USA \$15-\$60/hour of footage (per the source: "\$3-\$15 /hour of footage" / "\$15-\$60 /hour of footage") ? central, but note this is "object tracking," not specifically temporal/event segmentation.
- Frame-by-frame video annotation: India \$0.05-\$0.25/frame vs USA \$0.25-\$1.00+/frame ? supporting.
- India is 60-80% cheaper than US for equivalent task types ("India-based data labeling is typically 60-80% cheaper than US-based labeling") ? central to the India-vs-global rate range.
- Cost driver is complexity over geography ("The largest cost driver is annotation complexity, not geography") ? supporting nuance.

Flags: All pricing is vendor-self-published and unverifiable against any primary/independent benchmark; ranges are wide and quote-only in practice. The source does NOT break out temporal/event ("rally segment" start/end timestamp) pricing specifically ? its video rates cover object tracking and per-frame labeling, which are a different (typically more expensive) task than per-video timestamp lists. Source quality: blog (vendor content marketing). The relevant content lives only at the fetched URL; no repo files are involved.

15. user (2026-05-30T08:33:35.316Z)

Structured output provided successfully

16. assistant (2026-05-30T08:33:45.069Z)

Done. Submitted the structured output.

Summary of assessment:

****Source quality: blog (vendor content marketing).**** The page is a self-published article by Precise BPO Solution, an India-based annotation/BPO vendor (established 2008, per its own HTML metadata and BlogPosting schema). Author is the "Precise BPO Editorial Team." Published 2026-03-17, updated 2026-04-21 (confirmed via `article:published\_time` / `dateModified` in the raw HTML). All pricing is vendor-asserted with no methodology or external citation ? treat as directional, not authoritative.

****Relevance to the research question:**** Moderate-to-central for the market-rate sub-question (India vs US/global temporal video annotation rates), with an important caveat.

****Key flags:****

- All figures are vendor self-published and unverifiable against any independent benchmark; ranges are wide and effectively quote-only.
- The source does ****not**** break out temporal/event ("rally start/end timestamp") pricing specifically. Its video rates cover ****object tracking**** (\$3-\$15/hr footage in India) and ****per-frame**** labeling ? both typically a different, often more expensive task than a simple per-video timestamp CSV. So these rates are a loose upper-bound proxy, not a direct match for the rally-segmentation task.
- The 60-80% India-vs-US discount and "complexity > geography" points are the most reusable, source-agnostic takeaways.

No repo files were involved; all content lives at the fetched URL
`https://www.precisebposolution.com/blog/data-labeling-pricing.html`.
