Adversarial Claim Verifier (voter 3/3)

Be SKEPTICAL. Try to REFUTE this claim. ?2/3 refutations kill it.

Research question

RESEARCH GOAL: Produce a decision-grade shortlist of data-annotation VENDORS to build "golden set" ground-truth labels for a badminton highlights product, with a STRONG PREFERENCE for vendors based in or operating from Bangalore / India (the founder is in Bangalore and prefers local vendors for easier coordination, possible site visits, and data residency). The annotation task is TEMPORAL VIDEO SEGMENT annotation: marking the [start, end) time ranges of each "rally" in badminton match videos ? i.e. event / temporal-action labeling on video, NOT just image bounding boxes. Output is a simple per-video timestamp list (CSV of start,end). Volume: a constantly growing collection of licensed/owned match videos (no end-user uploads).

For EACH candidate vendor, verify against PRIMARY sources (the vendor's own website/docs) and clearly FLAG anything unverifiable (pricing is usually quote-only):

1. Company & location ? HQ + delivery centers; confirm Bangalore / India presence; flag if purely overseas.
2. Capability ? do they do VIDEO temporal/event annotation (timestamps/segments) or video tracking, or only static image labeling? Sports / media-video experience is a plus.
3. Pricing model ? per video-minute / per task / per annotator-hour / managed-team; any public rates; minimum engagement; willingness to run a small paid PILOT.
4. Data security & compliance ? ISO 27001, SOC 2, GDPR, and especially India's DPDP Act 2023; willingness to sign a DPA; "no training/reuse of our data"; delete-on-delivery; access controls; secure-facility / VDI options.
5. Delivery & integration ? programmatic API for submit/fetch? turnaround SLAs? can they support BOTH a fast tier (hours) and a batch tier (days)?
6. Quality process ? multi-annotator consensus, gold-standard/honeypot checks, inter-annotator-agreement (IAA) reporting, QA review layers.

Candidate vendors to investigate and VERIFY (do not assume ? confirm or correct each, and find others, especially Bangalore-local): iMerit, Playment (and whether TELUS International acquired it), Cogito Tech, Anolytics, Infolks, Learning Spiral, Indika AI, Tech Mahindra, Sama, Scale AI, Labelbox, Toloka, SuperAnnotate, Encord, CloudFactory. Also identify any Bangalore-based startups specializing in video annotation.

Also briefly cover: (a) typical market rate RANGE for temporal video annotation in India vs US/global; and (b) the AUTOMATED-annotation alternative ? could a hosted VLM (e.g. Gemini) or an open model serve as a "fast tier" oracle for surprise regression tests, and what that implies (it must be a DIFFERENT model lineage than the production tool to avoid shared-blind-spot bias).

DELIVERABLE: a ranked shortlist (favoring Bangalore/India) with a comparison table (vendor | location | video-temporal capability | pricing model | security/DPA & DPDP posture |

API/turnaround | QA process | pilot availability | verdict), plus 2?3 recommended vendors to approach for a pilot bake-off, and explicit flags on every unverifiable claim (especially pricing). Prioritize accuracy and primary-source citations over breadth.

Claim under review

"Encord supports labeling a frame-range time segment by explicitly setting a start frame and end frame for a classification instance ? the exact [start,end) temporal-span primitive needed to mark rally time ranges in match videos. (FLAG: the task's source URL <https://encord.com/video-annotation-tool/> is a dead HTTP 404; this verbatim quote is from Encord's live primary docs at docs.encord.com/platform-documentation/Annotate/annotate-label-editor/annotate-videos, the canonical replacement.)"

****Source:**** <https://encord.com/video-annotation-tool/> (primary)

****Supporting quote:**** "Set the desired start and end frame by clicking the ****Set start to current**** and ****Set end to current**** buttons."

Checklist

1. Is the claim actually supported by the quote, or is it an overreach/misread?
2. WebSearch for contradicting evidence ? does any credible source dispute or heavily qualify this?
3. Is the source quality sufficient for the claim's strength? (extraordinary claims need primary sources)
4. Is the claim outdated? (check dates ? old claims about fast-moving fields are suspect)
5. Is this a marketing claim / press release / cherry-picked benchmark / forum speculation?

****refuted=true**** if: unsupported by quote / contradicted / low-quality source for strong claim / outdated / marketing fluff.

****refuted=false**** ONLY if: claim is well-supported, current, and source quality matches claim strength.

Default to **refuted=true** if uncertain.

Structured output only. Evidence MUST be specific.

2. assistant (2026-05-30T08:35:59.159Z)

I'll verify this claim about Encord's video annotation capability. Let me check the primary sources.

3. user (2026-05-30T08:36:16.098Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

4. user (2026-05-30T08:36:22.997Z)

Yes, this page does describe setting a start and end frame for classification instances on video. Here is the relevant text:

"Set the desired start and end frame by clicking the ****Set start to current**** and ****Set end to current**** buttons or using the set hotkeys `<kbd>c</kbd>` and `<kbd>v</kbd>`, respectively."

The documentation explains that annotators can define a temporal range for frame-level classifications using these buttons or keyboard shortcuts to establish when a classification applies within the video timeline.

5. user (2026-05-30T08:36:30.454Z)

Yes, the page describes setting start and end frames for classification instances on video. Here's the relevant text:

"Set the desired start and end frame by clicking the ****Set start to current**** and ****Set end to**

current** buttons or using the set hotkeys `<kbd>c</kbd>` and `<kbd>v</kbd>`, respectively."

The documentation explains that annotators can define temporal ranges for frame-level classifications using these controls, and can add multiple ranges to handle cases where objects appear intermittently throughout a video.

6. user (2026-05-30T08:36:33.105Z)

Web search results for query: "Encord "Set start to current" "Set end to current" classification video frame"

Links: [{"title":"Videos & Image Sequences - Encord","url":"https://docs.encord.com/platform-documentation/Annotate/annotate-label-editor/annotate-videos"}, {"title":"How to Label - Encord","url":"https://docs.encord.com/platform-documentation/GettingStarted/gettingstarted-labeling"}]

Based on the search results, I found information about the "Set start to current" and "Set end to current" features in Encord's video annotation platform.

The "Set start to current" feature (with hotkey C) defines the current frame as the start of the range to which the classification is applied. The "Set end to current" feature (with hotkey V) defines the current frame as the end of the range to which the classification is applied.

These features are used when creating frame-level classifications in Encord. Frame-level classifications consider the frame as a whole, not the objects' localization. You can add additional ranges by clicking the Add range button or pressing the n hotkey to add a frame range (e.g., if a car enters and leaves the frame throughout a video).

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

7. user (2026-05-30T08:36:34.499Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. ``gh`` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

8. user (2026-05-30T08:36:38.702Z)

Frame Classification Instructions

Based on the documentation, here are the verbatim instructions for setting start and end frames:

****Direct Quote:****

"Set the desired start and end frame by clicking the ****Set start to current**** and ****Set end to current**** buttons or using the set hotkeys `<kbd>c</kbd>` and `<kbd>v</kbd>`, respectively."

****Temporal Capability:****

Classifications can indeed span multiple frames. The documentation explicitly supports creating frame ranges, allowing annotators to mark when objects enter and leave the video. Users can add multiple ranges by clicking the ***Add range*** button, enabling classifications to cover temporal segments rather than being limited to single frames.

9. user (2026-05-30T08:36:44.684Z)

Claude Code is unable to fetch from web.archive.org

10. user (2026-05-30T08:36:47.188Z)

Web search results for query: "Encord annotate classifications videos "start frame" "end frame" range"

Links: [{"title":"Videos & Image Sequences - Encord","url":"https://docs.encord.com/platform-documentation/Annotate/annotate-label-editor/annotate-videos"}, {"title":"Video Annotation Tool: 6x Faster Video Labeling for CV | Encord","url":"https://encord.com/video/"}, {"title":"The Full Guide to Video Annotation for Computer Vision | Encord","url":"https://encord.com/blog/video-annotation-guide/"}, {"title":"Comprehensive guide for image and video annotation for machine learning.", "url":"https://encord.com/blog/data-annotation-guide/"}, {"title":"Why Encord Is the Best Choice for Video Annotation: Stop Annotating Frame by Frame", "url":"https://encord.com/blog/why-encord-is-the-best-choice-for-video-annotation/"}, {"title":"Data Labeling Platform with Scalable HITL Workflows | Encord", "url":"https://encord.com/annotate/"}, {"title":"Auto segmentation tracking (BETA)", "url":"https://docs.encord.com/docs/annotate-auto-segmentation-tracking"}, {"title":"Label Editor - Encord", "url":"https://docs.encord.com/platform-documentation/Annotate/annotate-label-editor"}, {"title":"Video Annotation Challenges: How to Perfect AI Model Training | Encord", "url":"https://encord.com/blog/video-annotation-challenges/"}, {"title":"Encord Annotate - YouTube", "url":"https://www.youtube.com/playlist?list=PLNX15b4Hwn3SQN4iV6IIVDff_TAKCsi74"}]

Based on the search results, I found detailed information about how Encord handles classifications with start and end frame ranges in videos.

Encord Video Classification Frame Ranges

Creating frame classification(s) requires an Ontology with a classification annotation type. Frame-level classifications consider the frame as a whole, not the objects' localization.

Setting Frame Ranges for Classifications

You can set the desired start and end frame by clicking the "Set start to current" and "Set end to current" buttons or using the set hotkeys c and v, respectively. Additionally, you can click the "This frame" button or the x hotkey to set the slider to only the current frame (e.g., frame 100).

Adding Multiple Ranges

You can add additional ranges by clicking the "Add range" button or pressing the n hotkey to add a frame range (e.g., if a car enters and leaves the frame throughout a video). This allows annotators to specify multiple non-contiguous frame ranges for the same classification when needed.

Saving Classifications

Click the "Save" button or the m hotkey to save the instance. Alternatively, you can use the "This frame & save" button or the z hotkey to classify and save the results for a single frame quickly.

This functionality enables efficient temporal annotation of classifications across videos, allowing annotators to specify exactly which frames belong to a given classification category.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

11. user (2026-05-30T08:36:48.957Z)

Web search results for query: "Encord video classification range of frames start frame end frame annotate temporal segment"

Links: [{"title":"Video Annotation Tool: 6x Faster Video Labeling for CV | Encord", "url":"https://encord.com/video/"}, {"title":"Why Encord Is the Best Choice for Video Annotation: Stop Annotating Frame by Frame", "url":"https://encord.com/blog/why-encord-is-the-best-choice-for-video-annotation/"}, {"title":"The Full Guide to Video Annotation for Computer Vision | Encord", "url":"https://encord.com/blog/video-annotation-guide/"}, {"title":"Data Labeling Platform with Scalable HITL Workflows | Encord", "url":"https://encord.com/annotate/"}, {"title":"Video Annotation Challenges: How to"}]

```
Perfect AI Model Training | Encord", "url": "https://encord.com/blog/video-annotation-
challenges/"}], [{"title": "Entity based temporal segmentation of video
streams", "url": "https://image-pubs.uspto.gov/dirsearch-
public/print/downloadPdf/9607224"}], [{"title": "Advanced Video Annotation: Temporal Tracking and
Action Recognition", "url": "https://encord.com/blog/advanced-video-annotation-temporal-tracking-
and-action-recognition/"}]]
```

Based on the search results, here's what I found about Encord's video classification and temporal segment annotation capabilities:

Video Classification and Temporal Segmentation

Encord supports creating nested classifications with static, dynamic and relation attributes to capture real world scenarios with temporally evolving object behavior.

Temporal Range Annotation

The annotation process doesn't require annotating each frame individually - labeling the first occurrence of an object and the last frame it occurs is sufficient. This approach allows annotators to define temporal ranges efficiently.

Annotation Approaches

Encord supports both keyframe annotation (labeling specific frames at regular intervals or points of significant change) and dense annotation (labeling every frame), allowing teams to optimize their workflow based on specific requirements.

Temporal Context and Consistency

Encord uses native video rendering to preserve temporal context, prevent frame-splitting issues, and reduce storage usage by up to 80%. The platform uses SAM2 to predict the placement of bounding boxes across subsequent frames, supporting re-identification even when objects temporarily disappear, which reduces annotation time while maintaining temporal consistency.

For more specific technical documentation about defining start and end frame ranges for video classification tasks in Encord, you may want to check Encord's official documentation or API guides directly.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

12. user (2026-05-30T08:36:50.262Z)

Based on the JSON provided, there is **no archived snapshot URL or timestamp**. The ``"archived_snapshots"`` field is empty (an empty object ``{}``), indicating that no snapshots have been archived for the page at "encord.com/video-annotation-tool/".

13. user (2026-05-30T08:36:52.374Z)

Based on the JSON response provided, there are **no archived snapshots available** for this URL. The ``archived_snapshots`` field is empty, so I cannot return a snapshot URL or timestamp.

14. user (2026-05-30T08:36:52.779Z)

Web search results for query: "Encord video annotation classification "Set start to current""

Links: [{"title": "Videos & Image Sequences - Encord", "url": "https://docs.encord.com/platform-documentation/Annotate/annotate-label-editor/annotate-videos"}, {"title": "How to Label - Encord", "url": "https://docs.encord.com/platform-documentation/GettingStarted/gettingstarted-labeling"}]

Based on the search results, I found information about the "Set start to current" feature in

Encord's video annotation system.

"Set start to current" (hotkey C) defines the current frame as the start of the range to which the classification is applied. This is used when working with frame-level classifications in video annotation.

You can set the desired start and end frame by clicking the "Set start to current" and "Set end to current" buttons or using the set hotkeys C and V, respectively. This allows annotators to efficiently mark the temporal range for video classifications without having to manually adjust frame numbers.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

15. user (2026-05-30T08:36:54.170Z)

Claude Code is unable to fetch from web.archive.org

16. user (2026-05-30T08:37:04.248Z)

Video Classification Frame Range Instructions

Yes, classifications can span a range of frames (temporal segments) in video. Here are the verbatim instructions:

****Setting Frame Ranges:****

"Set the desired start and end frame by clicking the ****Set start to current**** and ****Set end to current**** buttons or using the set hotkeys C and V, respectively."

****Additional capabilities:****

- "Click the ****This frame**** button or the X hotkey to set the slider to only the current frame"
- "Add additional ranges by clicking the _Add range_ button or pressing the N hotkey to add a frame range"
- Use ****This frame & save**** button or the Z hotkey to classify and save the results for a single frame quickly"

The documentation confirms that frame-level classifications support temporal ranges, allowing annotators to apply a single classification label across multiple frames in a video sequence.

17. user (2026-05-30T08:37:07.024Z)

Video Classification Annotation Instructions

Yes, classifications can span a range of frames (temporal segments) in videos.

Here are the verbatim instructions for setting start and end frames:

"Set the desired start and end frame by clicking the ****Set start to current**** and ****Set end to current**** buttons or using the set hotkeys C and V, respectively."

Additional relevant instructions include:

"Click the ****This frame**** button or the X hotkey to set the slider to only the current frame (e.g., frame 100). Add additional ranges by clicking the _Add range_ button or pressing the N hotkey to add a frame range (e.g., if a car enters and leaves the frame throughout a video)."

The documentation confirms that frame-level classifications can span multiple frames, allowing annotators to label temporal segments rather than just individual frames.

18. user (2026-05-30T08:37:08.123Z)

I cannot provide the requested information. The webpage content you've shared is a 404 error

page containing only navigation links and section headings. It does not include any step-by-step instructions for adding classifications to videos, nor does it contain the specific text phrases you're searching for, such as "Set start to current" or "Set end to current."

To find this information, you would need to access the actual documentation page at a working URL, such as the general video annotation guide linked in the content.

19. user (2026-05-30T08:37:07.528Z)

Claude Code is unable to fetch from web.archive.org

22. user (2026-05-30T08:37:23.479Z)

Web search results for query: "Encord classifications video "range of frames" OR "frame range" label editor annotate"

Links: [{"title": "Videos & Image Sequences - Encord", "url": "https://docs.encord.com/platform-documentation/Annotate/annotate-label-editor/annotate-videos"}, {"title": "Label Editor - Encord", "url": "https://docs.encord.com/platform-documentation/Annotate/annotate-label-editor"}, {"title": "Video Annotation Tool: 6x Faster Video Labeling for CV | Encord", "url": "https://encord.com/video/"}, {"title": "The Full Guide to Video Annotation for Computer Vision | Encord", "url": "https://encord.com/blog/video-annotation-guide/"}, {"title": "Auto segmentation tracking (BETA)", "url": "https://docs.encord.com/docs/annotate-auto-segmentation-tracking"}, {"title": "Video Annotation Challenges: How to Perfect AI Model Training | Encord", "url": "https://encord.com/blog/video-annotation-challenges/"}, {"title": "Data Labeling Platform with Scalable HITL Workflows | Encord", "url": "https://encord.com/annotate/"}, {"title": "Why Encord Is the Best Choice for Video Annotation: Stop Annotating Frame by Frame", "url": "https://encord.com/blog/why-encord-is-the-best-choice-for-video-annotation/"}, {"title": "4 Ways to Automate Video Annotations in Your Machine Learning Project", "url": "https://encord.com/blog/automate-video-annotation-guide/"}, {"title": "Comprehensive guide for image and video annotation for machine learning.", "url": "https://encord.com/blog/data-annotation-guide/"}]

Based on the search results, I found relevant information about Encord's video annotation capabilities related to frame ranges and classifications:

Key Findings:

Encord supports creating frame-level and object event classifications in the Label Editor for video annotation.

For managing frame ranges in the label editor, you can set the interpolation range (i.e., the range of frames) when using the Interpolation feature for automated labeling.

Additionally, you can specify a range of frames to delete the specified labels from, which allows for frame-range-based label management.

The Label Editor's interface provides visual feedback on frame ranges: you can hover over an object on the timeline to see the frame range of frames it appears in, and the values of any attributes the object has.

Dynamic attributes are only applied in the frames specifically indicated but can be edited in ranges if they span multiple frames, which is relevant for managing classifications across multiple frames.

These features allow annotators to efficiently work with video classifications across specific frame ranges rather than labeling individual frames manually.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

23. user (2026-05-30T08:37:25.467Z)

Web search results for query: "Encord video annotation tool classifications span multiple frames temporal start end frame dynamic"

Links: [{"title": "Videos & Image Sequences - Encord", "url": "https://docs.encord.com/platform-documentation/Annotate/annotate-label-editor/annotate-videos"}, {"title": "Video Annotation Explained: Techniques, Tools & Use Cases | Encord", "url": "https://encord.com/glossary/video-annotation-defined/"}, {"title": "Video Annotation Tool: 6x Faster Video Labeling for CV | Encord", "url": "https://encord.com/video/"}, {"title": "The Full Guide to Video Annotation for Computer Vision | Encord", "url": "https://encord.com/blog/video-annotation-guide/"}, {"title": "Video Annotation Challenges: How to Perfect AI Model Training | Encord", "url": "https://encord.com/blog/video-annotation-challenges/"}, {"title": "Why Encord Is the Best Choice for Video Annotation: Stop Annotating Frame by Frame", "url": "https://encord.com/blog/why-encord-is-the-best-choice-for-video-annotation/"}, {"title": "Best Practices for Video Annotation in Multi-Object Tracking", "url": "https://encord.com/blog/multi-object-tracking/"}, {"title": "Advanced Video Annotation: Temporal Tracking and Action Recognition", "url": "https://encord.com/blog/advanced-video-annotation-temporal-tracking-and-action-recognition/"}]

Based on the search results, here's what I found about Encord's video annotation tool and how it handles classifications spanning multiple frames with temporal properties:

Temporal Classifications and Dynamic Attributes

Frames are annotated using classifications, and instantiating classifications in the video editor generates a UUID that uniquely identifies that instance across a range of frames (in the temporal dimension).

Dynamic attributes are only applied in the frames specifically indicated but can be edited in ranges if they span multiple frames. Encord supports keyframe-based attribute propagation, allowing you to mark frames in which dynamic attributes change value as keyframes, and then bulk apply attributes between the keyframes.

Support for Multiple Classification Types

Encord currently supports radio, checklist, and free-form text input classification types. The platform allows creating nested classifications with static, dynamic and relation attributes to capture real world scenarios in granular detail and temporally evolving object behaviour.

Temporal Data Labeling

Temporal annotations such as when an event starts and ends are crucial for applications like behavior analysis or anomaly detection. The dynamic attributes in the Encord platform help ensure that annotations capture temporal changes to accurately detect objects that appear over time in a video frame.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

24. user (2026-05-30T08:37:22.067Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated

tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

25. user (2026-05-30T08:37:29.659Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

26. user (2026-05-30T08:37:36.789Z)

Web search results for query: "Encord video classification temporal label assign frames range nested classifications dynamic objects"

Links: [{"title": "Videos & Image Sequences - Encord", "url": "https://docs.encord.com/platform-documentation/Annotate/annotate-label-editor/annotate-videos"}, {"title": "How Does Encord Support Image Classification Workflows? | Label Studio", "url": "https://labelstud.io/learningcenter/encord-image-classification-workflow/"}, {"title": "Video Annotation Tool: 6x Faster Video Labeling for CV | Encord", "url": "https://encord.com/video/"}, {"title": "The Full Guide to Video Annotation for Computer Vision | Encord", "url": "https://encord.com/blog/video-annotation-guide/"}, {"title": "Video classification in AI: annotations and algorithms", "url": "https://www.innovatiana.com/en/post/video-classification"}, {"title": "Video Annotation Challenges: How to Perfect AI Model Training | Encord", "url": "https://encord.com/blog/video-annotation-challenges/"}, {"title": "Data Labeling Platform with Scalable HITL Workflows | Encord", "url": "https://encord.com/annotate/"}, {"title": "Is Encord the Right Data Labeling Platform for Your Team? | Label Studio", "url": "https://labelstud.io/learningcenter/encord-data-labeling-platform-review/"}]

Based on the search results, here's what I found about Encord's video classification and labeling capabilities:

Temporal Labels and Frame Ranges

Dynamic attributes are only applied in the frames specifically indicated but can be edited in ranges if they span multiple frames. This allows annotators to assign classifications across specific frame ranges in videos.

Nested Classifications

Encord's nested ontology system supports multi-level classification taxonomies where available sub-classes depend on the parent class selection. Encord allows users to create nested classifications with static, dynamic and relation attributes to capture real world scenarios in granular detail and temporally evolving object behaviour.

Dynamic Objects and Attributes

Dynamic attributes capture evolving object behavior across video frames, extending this to temporal classification. The dynamic attributes in the Encord platform help ensure that annotations capture temporal changes to accurately detect objects that appear over time in a video frame. For example, if annotating a video of a car, you can track its attributes like speed, color, or direction, and update them as they appear across multiple frames.

Classification Assignment

Bounding box instances can be assigned classifications by clicking on the relevant buttons or using set hotkeys. Classifications can be assigned by clicking on the relevant buttons or using set hotkeys.

Encord is noted as one of the strongest choices in the market for video annotation work, with object tracking, temporal interpolation, and frame-level classification being genuinely differentiated.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

27. user (2026-05-30T08:37:50.609Z)

I cannot provide the information you requested. The URL returned a **404 error (Page Not Found)**, which means the documentation page about annotating classifications on videos is not accessible.

The markdown content shown contains only a navigation menu with links to various documentation sections?it does not include the actual body text of the page you're looking for.

To find instructions about "Set start to current" and "Set end to current" features for video classification annotations, you would need to:

1. Check if the page URL has changed
2. Contact Encord support for the current documentation location
3. Browse their documentation site directly at <https://docs.encord.com/>

28. user (2026-05-30T08:38:02.039Z)

Structured output provided successfully

29. assistant (2026-05-30T08:38:10.831Z)

I need to reconsider my verdict. My first StructuredOutput call was premature ? I submitted before reviewing the results, which actually CONFIRM the quote on the canonical replacement source. Let me re-evaluate honestly.

The evidence strongly SUPPORTS the claim:

1. The substitute URL docs.encord.com/.../annotate-videos returned the EXACT verbatim quote multiple times: "Set the desired start and end frame by clicking the **Set start to current** and **Set end to current** buttons or using the set hotkeys c and v, respectively."
2. WebSearch independently confirmed these phrases (against my earlier note ? searches DID surface the exact phrases on the docs page).
3. Multiple corroborating sources confirm classifications span a frame range (temporal segment) with a start frame and end frame, plus "Add range" for non-contiguous segments.
4. The claim is transparent and accurate about the original Source URL being a dead 404, and correctly cites the canonical replacement.

The quote fully supports the claim: setting an explicit start frame and end frame for a classification instance IS the [start,end) temporal-span primitive. My initial refutation rested on a tooling-failure narrative that the actual results contradict.

I'll submit a corrected verdict.

30. user (2026-05-30T08:38:21.340Z)

Structured output provided successfully

31. assistant (2026-05-30T08:38:29.379Z)

I've completed the verification with a corrected verdict.

Verdict: NOT REFUTED (high confidence)

My first StructuredOutput call was premature ? I submitted a refutation before reading the tool results, and built it on a false premise (that the docs body was unretrievable). The actual results contradict that narrative.

Findings:

- The supporting quote is confirmed **verbatim** on Encord's canonical primary docs (docs.encord.com/.../annotate-videos), retrieved consistently across multiple independent fetches: "Set the desired start and end frame by clicking the **Set start to current** and **Set end to current** buttons or using the set hotkeys c and v, respectively."

- This is exactly the `[start, end)` frame-range primitive the claim describes. Corroborated by the docs' "This frame" (single-frame) and "Add range" (non-contiguous spans) controls, plus independent WebSearch hits quoting the same UI text.
- The dead-URL flag is accurate: the originally cited <https://encord.com/video-annotation-tool/> does return HTTP 404, and the claim is transparent about sourcing the quote from the live docs replacement instead.

The claim is well-supported, current, and backed by the vendor's own primary docs ? source quality matches claim strength. No contradicting evidence found.
