Adversarial Claim Verifier (voter 3/3)

Be SKEPTICAL. Try to REFUTE this claim. ?2/3 refutations kill it.

Research question

RESEARCH GOAL: Identify and eliminate every dependency that could legally or economically hinder monetizing the "badminton-highlight-indexer" project as a HOSTED API SaaS. Business model: the project runs server-side on a cloud GPU VM (NVIDIA); users upload their own badminton videos and receive auto-generated highlight reels. CRITICAL CONSTRAINT: we do NOT distribute the code or any binary to users ? everything stays server-side ? so software that is merely *hosted* on the server (invoked as a separate process, e.g. ffmpeg) is acceptable where distribution-triggered copyleft (GPL/LGPL) would NOT be triggered, BUT network/SaaS copyleft (AGPL §13) and external metered-API terms STILL apply. Preference order: permissively-licensed (Apache-2.0/MIT/BSD) and royalty-free, self-hostable components. Paid commercial licenses (e.g. Ultralytics Enterprise, codec patent licenses) are acceptable ONLY as clearly-flagged fallbacks. Output must be decision-grade with licenses verified against PRIMARY sources (actual GitHub LICENSE files, official pricing/terms pages), because this drives a real business decision ? flag any claim you could not verify.

CURRENT STACK TO AUDIT (verify each license + its SaaS implication):

- ultralytics (Python lib) + the bundled YOLOv8n.pt model weights ? believed AGPL-3.0. Confirm the license of BOTH the code and the pretrained weights, whether the AGPL network clause is triggered by a closed-source hosted service that uses ultralytics server-side, and the existence/cost/terms of the Ultralytics Enterprise license.
- google-genai SDK + the Google Gemini API (model gemini-2.5-flash). Distinguish the SDK license (Apache?) from the SERVICE terms. Confirm: (a) is commercial use of outputs allowed in a paid product; (b) does Google train on / human-review prompt+video data on the PAID/billed tier vs the free tier; (c) abuse-monitoring / data-retention terms; (d) current per-token / per-video pricing for gemini-2.5-flash (input video tokens-per-second, output) so we can sketch per-video cost.
- ffmpeg / ffprobe (system binaries, invoked as separate processes). Clarify GPL vs LGPL builds and whether pure server-side SaaS use (no distribution to users) triggers any source-disclosure obligation. SEPARATELY and importantly: video CODEC PATENT royalties for a commercial service that DECODES user-uploaded H.264/AVC and H.265/HEVC (e.g. GoPro footage) and ENCODES output ? covering MPEG-LA / Via-LA (AVC), Access Advance + Via-LA + others (HEVC) pools, AAC audio (Via-LA), what activities trigger royalties, any free thresholds (e.g. the AVC sub-100k or free-internet-broadcast provisions), and whether a small SaaS realistically incurs these. Then royalty-FREE codec alternatives for the OUTPUT we generate: AV1, VP9, Opus ? and their encoder maturity/speed on a GPU VM.
- torch, torchvision ? confirm BSD; flag that some torchvision *pretrained weights* may carry separate licenses.
- opencv-python ? confirm Apache-2.0 and that the PyPI wheel's bundled components are clean for commercial server use.

- lapx (a fork of "lap" for ByteTrack association) ? confirm license.
- Quick permissive confirmation for: fastapi, uvicorn, pydantic, jinja2, python-dotenv, numpy.

PERMISSIVE ALTERNATIVES TO RESEARCH (all must be GPU-VM-friendly and usable in a closed-source commercial SaaS):

1. Object detection to replace ultralytics/YOLOv8 for player/person detection (and possibly shuttle): compare YOLOX (Apache-2.0), RT-DETR / RT-DETRv2 (the Baidu/Apache implementations ? NOT the Ultralytics port), PP-YOLOE, MMDetection (Apache-2.0), Detectron2 (Apache-2.0), torchvision built-in detectors (Faster R-CNN/RetinaNet/FCOS/SSD, BSD), RF-DETR (Roboflow), and D-FINE/DEIM. For EACH, verify BOTH the code license AND the pretrained-weights license (some "open" detectors like YOLO-NAS have restrictive weight licenses ? confirm). Note accuracy/speed trade-offs for person detection on sports video.
2. Shuttle/ball trajectory tracking ? VERIFY the actual repo licenses (commercial-use viability) of: WASB / WASB-SBDT ("Widely Applicable Strong Baseline" for sports ball detection), TrackNetV2 and TrackNetV3, MonoTrack, and any permissively-licensed alternative for tiny-fast-object tracking. This is the planned shuttle-tracking substrate, so its commercial-use license is high-stakes.
3. LLM / semantic rally-boundary step ? research ALL THREE strategies (the user wants all three compared):
 - (a) ELIMINATE the hosted LLM entirely: permissively-licensed temporal action segmentation / video models suitable for learning rally boundaries offline (e.g. MS-TCN/MS-TCN++, ASFormer, ActionFormer, and similar) ? verify licenses and whether they fit a from-annotations learned segmenter.
 - (b) SELF-HOST an open-weights vision-language model that can ingest video frames for semantic boundaries: compare Qwen2.5-VL, InternVL2/2.5, LLaVA-OneVision/LLaVA-Video, MiniCPM-V, VideoLLaMA ? for EACH verify the WEIGHTS license for commercial use (Apache-2.0 vs custom "research-only"/"non-commercial"/community licenses with MAU caps) and the GPU VRAM needed per size tier.
 - (c) KEEP Gemini but de-risk: summarize commercial terms, data-usage on paid tier, rate limits, and per-video cost at scale, plus other hosted-API alternatives (OpenAI, Anthropic) and how their commercial/data terms compare.

DELIVERABLE: A cited report containing (1) a per-dependency RISK TABLE ? columns: dependency, license, does-SaaS-hosting-trigger-obligations?, monetization verdict (CLEAR / WATCH / BLOCKER), recommended action; (2) a recommended FULLY-PERMISSIVE target stack that eliminates all BLOCKERS; (3) paid-license fallbacks where relevant; (4) a rough per-video processing-cost sketch on a GPU VM for each of the three LLM strategies; (5) an explicit list of the codec/patent considerations and the royalty-free output-codec recommendation. Prioritize accuracy and primary-source citations over breadth.

Claim under review

"Ultralytics explicitly states that SaaS platforms, APIs, or cloud systems using YOLO server-side ('behind the scenes') require an Enterprise License if the operator does not want to open-source the entire project ? i.e., closed-source hosted SaaS use does NOT escape AGPL obligations."

****Source:**** <https://docs.ultralytics.com/help/license/> (primary)

****Supporting quote:**** "SaaS platforms, APIs, or cloud systems that use YOLO behind the scenes [require an Enterprise License]; AGPL-3.0 compliance requires publicly releasing the complete corresponding source code for the entire derivative work"

Checklist

1. Is the claim actually supported by the quote, or is it an overreach/misread?
2. WebSearch for contradicting evidence ? does any credible source dispute or heavily qualify this?
3. Is the source quality sufficient for the claim's strength? (extraordinary claims need primary sources)
4. Is the claim outdated? (check dates ? old claims about fast-moving fields are suspect)
5. Is this a marketing claim / press release / cherry-picked benchmark / forum speculation?

****refuted=true**** if: unsupported by quote / contradicted / low-quality source for strong claim / outdated / marketing fluff.

****refuted=false**** ONLY if: claim is well-supported, current, and source quality matches claim strength.

Default to refuted=true if uncertain.

Structured output only. Evidence MUST be specific.

2. assistant (2026-05-30T03:10:41.572Z)

I'll verify this claim about Ultralytics' Enterprise License requirements for SaaS use. Let me check the primary source and search for any contradicting evidence.

3. user (2026-05-30T03:10:58.267Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

5. user (2026-05-30T03:11:20.600Z)

Web search results for query: "Ultralytics AGPL-3.0 SaaS Enterprise License required closed-source server-side"

Links: [{"title": "Ultralytics License", "url": "https://www.ultralytics.com/license"}, {"title": "AGPL-3.0 License Inquiry: Commercial Use in End Product (On-Device Model, Non-Network Service · Issue #19390 · ultralytics /ultralytics", "url": "https://github.com/ultralytics/ultralytics/issues/19390"}, {"title": "Ultralytics Platform Pricing Plans: Free, Pro, Enterprise", "url": "https://www.ultralytics.com/pricing"}, {"title": "A question about the license · ultralytics · Discussion #1260", "url": "https://github.com/orgs/ultralytics/discussions/1260"}, {"title": "License Ambiguity: Ultralytics Website does not follow the spirit of GNU AGPLv3 · Issue #22458 · ultralytics/ultralytics", "url": "https://github.com/ultralytics/ultralytics/issues/22458"}, {"title": "AGPL 3.0 Software License | Ultralytics", "url": "https://www.ultralytics.com/legal/agpl-3-0-software-license"}, {"title": "Question regarding the AGPL-3.0 license · Issue #2129 · ultralytics/ultralytics", "url": "https://github.com/ultralytics/ultralytics/issues/2129"}]

Based on the search results, here's what I found about Ultralytics' AGPL-3.0 license and Enterprise License requirements:

Key Licensing Information

AGPL-3.0 covers a lot of use cases - but there are specific triggers that require an Ultralytics Enterprise license.

An Enterprise License is required if you want to use Ultralytics YOLO without open-sourcing your entire project, such as for internal business tools or private company applications and customer-facing solutions where you do not want to publish code, configs, training scripts, and related components.

SaaS and Server-Side Deployment

Regarding SaaS and server-side deployment specifically, the GNU Affero General Public License is designed specifically to ensure that the modified source code becomes available to the community, and it requires the operator of a network server to provide the source code of the modified version running there to the users of that server.

Enterprise License Benefits

Enterprise includes a commercial Enterprise License that allows you to deploy YOLO models in proprietary, closed-source applications without any open-source obligations.

An Enterprise License provides organizations with the ability to modify Ultralytics YOLO source code and embed Ultralytics YOLO code and models in commercial products without needing to follow the constraints of the AGPL-3.0 License, namely the requirement to open-source modified works or larger works containing Ultralytics YOLO code and models. This gives organizations full flexibility to develop proprietary products and services containing Ultralytics YOLO code and models.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

6. user (2026-05-30T03:11:22.056Z)

Ultralytics Licensing Requirements

Enterprise License Triggers

The page states an Enterprise License is required for:

"SaaS platforms, APIs, or cloud systems that use YOLO behind the scenes"

It also lists "Embedded deployments in hardware, edge devices, robotics, cameras, or appliances" and "Using custom-trained or fine-tuned YOLO models in a proprietary or commercial setting."

AGPL-3.0 Scope

The document describes the AGPL license as covering situations where you are "comfortable open-sourcing your entire project under AGPL-3.0." However, ****the page does not explicitly describe AGPL's network-based source-disclosure obligation**** (the so-called "Afferro" clause).

It does note that compliance means "publicly releasing the complete corresponding source code for the entire derivative work, including the larger application, modifications, scripts, configuration files" ? but frames this as a requirement for open-sourcing rather than explaining AGPL's specific network-use provision.

7. user (2026-05-30T03:11:18.963Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

8. user (2026-05-30T03:11:30.794Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

9. user (2026-05-30T03:11:34.981Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

10. user (2026-05-30T03:11:36.499Z)

Web search results for query: "Ultralytics licensing examples "SaaS" "behind the scenes"
Enterprise License AGPL network clause"

Links: [{"title": "Ultralytics License", "url": "https://www.ultralytics.com/license"}, {"title": "AGPL-3.0 License Inquiry: Commercial Use in End Product (On-Device Model, Non-Network Service · Issue #19390 · ultralytics/ultralytics", "url": "https://github.com/ultralytics/ultralytics/issues/19390"}, {"title": "AGPL 3.0 Software License | Ultralytics", "url": "https://www.ultralytics.com/legal/agpl-3-0-software-license"}, {"title": "Ultralytics Platform Pricing Plans: Free, Pro, Enterprise", "url": "https://www.ultralytics.com/pricing"}, {"title": "ultralytics/LICENSE at main · ultralytics/ultralytics", "url": "https://github.com/ultralytics/ultralytics/blob/main/LICENSE"}, {"title": "A question about the license · ultralytics · Discussion #1260", "url": "https://github.com/orgs/ultralytics/discussions/1260"}, {"title": "Enterprise Software License Agreement | Ultralytics", "url": "https://www.ultralytics.com/legal/enterprise-software-license"}, {"title": "YOLOv11 AGPL License for On-Premises Use - Discussion - Ultralytics", "url": "https://community.ultralytics.com/t/yolov11-agpl-license-for-on-premises-use/1529"}, {"title": "Ultralytics YOLO License Information", "url": "https://developer.imagimob.com/legal/ultralytics-license-information"}]

Based on the search results, here's what I found regarding Ultralytics licensing:

Key Licensing Information

****AGPL-3.0 License Details:****

AGPL-3.0 covers a lot of use cases - but there are specific triggers that require an Ultralytics Enterprise license. Importantly, it requires the operator of a network server to provide the source code of the modified version running there to the users of that server. This is the network clause you mentioned? a distinguishing feature of AGPL compared to standard GPL.

****Enterprise License Requirements:****

An Enterprise License is required if you want to use Ultralytics YOLO without open-sourcing your entire project. More specifically, an Enterprise License provides organizations with the ability to modify Ultralytics YOLO source code and embed Ultralytics YOLO code and models in commercial products without needing to follow the constraints of the AGPL-3.0 License, namely the requirement to open-source modified works or larger works containing Ultralytics YOLO code and models. This gives organizations full flexibility to develop proprietary products and services containing Ultralytics YOLO code and models.

****SaaS Considerations:****

While the search results discuss proprietary commercial embedding and internal use cases, the specific "behind the scenes" SaaS example and detailed SaaS-specific guidance from your query were not found in the results. The network clause in AGPL-3.0 is particularly relevant to SaaS deployments, but the results don't contain explicit examples of how Ultralytics handles SaaS licensing scenarios.

For more detailed SaaS-specific guidance, you may want to consult Ultralytics' licensing page directly or contact their sales team.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

11. user (2026-05-30T03:11:36.962Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

12. user (2026-05-30T03:11:45.730Z)

Web search results for query: ""SaaS platforms, APIs, or cloud systems" YOLO "behind the scenes" Ultralytics Enterprise License"

Links: [{"title": "Ultralytics License", "url": "https://www.ultralytics.com/license"}, {"title": "Enterprise Software License Agreement | Ultralytics", "url": "https://www.ultralytics.com/legal/enterprise-software-license"}, {"title": "Home | Ultralytics Docs", "url": "https://docs.ultralytics.com/"}, {"title": "A question about the license · ultralytics · Discussion #1260", "url": "https://github.com/orgs/ultralytics/discussions/1260"}, {"title": "GitHub - ultralytics/ultralytics: Ultralytics YOLO ?", "url": "https://github.com/ultralytics/ultralytics"}, {"title": "Inquiry About YOLO Enterprise License ? Pricing, Usage, and Integration Options · Issue #21066 · ultralytics/ultralytics", "url": "https://github.com/ultralytics/ultralytics/issues/21066"}, {"title": "YOLO11 Model License and Pricing", "url": "https://roboflow.com/model-licenses/yolo11"}, {"title": "Pricing | Ultralytics", "url": "https://www.ultralytics.com/pricing"}, {"title": "Ultralytics YOLO Pricing, Reviews & Product Overview", "url": "https://zsoftwarehub.com/en-ae/products/ultralytics-yolo/overview"}, {"title": "YOLOv8 Model License and Pricing", "url": "https://roboflow.com/model-licenses/yolov8"}]

Based on the search results, I found the exact information you were looking for. Here's what Ultralytics states about SaaS platforms, APIs, and cloud systems using YOLO:

An Ultralytics Enterprise License is required for SaaS platforms, APIs, or cloud systems that use YOLO behind the scenes.

This is explicitly listed as one of the use cases that requires an Enterprise License rather than operating under the open-source AGPL-3.0 license. An Enterprise License is required if you want to use Ultralytics YOLO without open-sourcing your entire project.

The rationale is that if you use Ultralytics YOLO code, models, architectures, training pipelines, or trained/fine-tuned models, you must either open-source your entire project under AGPL-3.0, or obtain an Ultralytics Enterprise License.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

13. user (2026-05-30T03:11:49.155Z)

I cannot provide the information you're requesting because the web page content provided is a Medium 404 error page. It does not contain any article about YOLO, Ultralytics licensing, SaaS usage, AGPL-3.0, or related topics.

The page only displays a "PAGE NOT FOUND" message and lists unrelated article recommendations. To answer your question accurately, I would need access to the actual article content about Ultralytics licensing that you're referring to.

14. user (2026-05-30T03:11:59.418Z)

```
,{"title":"Question regarding the AGPL-3.0 license · Issue #2129 · ultralytics/ultralytics","url":"https://github.com/ultralytics/ultralytics/issues/2129"}]]
```

Based on the search results, here's what I found about Ultralytics AGPL-3.0 license requirements for network use, SaaS, internal use, and open-source obligations:

Key AGPL-3.0 Requirements

The AGPL-3.0 license requires that any modifications and the source code of the AGPL-licensed software (in this case, YOLOv8) be made available to users who interact with it over a network. This is a critical distinction between AGPL and regular GPL licenses.

AGPL is stricter than GPL: Even cloud/SaaS deployments must be open-source modifications.

Internal and Commercial Use

Any internal company use of Ultralytics YOLO models (including modified YOLOv8) requires either an Enterprise License or open-sourcing your entire project under AGPL-3.0.

Compliance Trigger

AGPL-3.0 covers a lot of use cases - but there are specific triggers that require an Ultralytics Enterprise license. An Enterprise License is required if you want to use Ultralytics YOLO without open-sourcing your entire project.

What Must Be Open-Sourced

Under Ultralytics AGPL-3.0 guidance, compliance means publicly releasing the complete corresponding source code for the entire derivative work, including the larger application, modifications, scripts, configuration files, and, where applicable, model weights.

The key trigger is any network access to the software?this includes SaaS/cloud deployments, APIs, and internal company use that isn't publicly released.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

15. user (2026-05-30T03:12:01.689Z)

Web search results for query: "Ultralytics license docs "Enterprise License" examples SaaS service customers AGPL commercial"

```
Links: [{"title":"Ultralytics License","url":"https://www.ultralytics.com/license"}, {"title":"Ultralytics Platform Pricing Plans: Free, Pro, Enterprise","url":"https://www.ultralytics.com/pricing"}, {"title":"Enterprise Software License Agreement | Ultralytics","url":"https://www.ultralytics.com/legal/enterprise-software-license"}, {"title":"Home | Ultralytics Docs","url":"https://docs.ultralytics.com/"}, {"title":"Ultralytics YOLO License Information","url":"https://developer.imagimob.com/legal/ultralytics-license-information"}, {"title":"A question about the license · ultralytics · Discussion #1260","url":"https://github.com/orgs/ultralytics/discussions/1260"}, {"title":"AGPL-3.0 License Inquiry: Commercial Use in End Product (On-Device Model, Non-Network Service · Issue #19390 · ultralytics/ultralytics","url":"https://github.com/ultralytics/ultralytics/issues/19390"}, {"title":"GitHub - ultralytics/ultralytics: Ultralytics YOLO ?","url":"https://github.com/ultralytics/ultralytics"}, {"title":"Ultralytics/YOLOv8 · Hugging Face","url":"https://huggingface.co/Ultralytics/YOLOv8"}, {"title":"ultralytics/LICENSE at main · ultralytics/ultralytics","url":"https://github.com/ultralytics/ultralytics/blob/main/LICENSE"}]]
```

I found comprehensive information about Ultralytics licensing. Here's what the documentation shows:

Enterprise License Overview

An Enterprise License provides organizations with the ability to modify Ultralytics YOLO source code and embed Ultralytics YOLO code and models in commercial products without needing to follow the constraints of the AGPL-3.0 License, namely the requirement to open-source modified works or larger works containing Ultralytics YOLO code and models.

Key Use Cases for Enterprise License

Enterprise License is required for customer-facing solutions where you do not want to publish code, configs, training scripts, and related components, as well as internal business tools or private company applications.

The Enterprise License enables seamless integration of Ultralytics software and AI models into business products and services, including internal tools, automated workflows, and production deployments, bypassing the open-source requirements of AGPL-3.0.

AGPL-3.0 vs. Enterprise

Under Ultralytics AGPL-3.0 guidance, compliance means publicly releasing the complete corresponding source code for the entire derivative work, including the larger application, modifications, scripts, configuration files, and, where applicable, model weights.

Any internal company use of Ultralytics YOLO models (including modified YOLOv8) requires either an Enterprise License or open-sourcing your entire project under AGPL-3.0. Since proprietary internal usage without public release of source code and trained models requires an Enterprise License.

Commercial Rights

Under the Enterprise License, licensees hold the right to use the Software for any purpose, including commercial and for-profit purposes, and may make and distribute an unlimited number of commercial, for-profit products and services containing the Software.

The documentation indicates that Chef Robotics is mentioned as an example of proprietary commercial embedding covered by Enterprise License.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

16. user (2026-05-30T03:12:09.881Z)

Web search results for query: "Ultralytics YOLO AGPL forces open source everything SaaS internal deployment Karthik Karunakaran"

Links: [{"title": "Ultralytics License", "url": "https://www.ultralytics.com/license"}, {"title": "GitHub - ultralytics/ultralytics: Ultralytics YOLO", "url": "https://github.com/ultralytics/ultralytics"}, {"title": "Home | Ultralytics Docs", "url": "https://docs.ultralytics.com/"}, {"title": "YOLO use in code accompanying scientific publication and licensing · Issue #9506 · ultralytics/ultralytics", "url": "https://github.com/ultralytics/ultralytics/issues/9506"}, {"title": "YOLO Model Licenses: A Developer's Guide | by Bing Bai | Medium", "url": "https://medium.com/@bingbai.jp/yolo-model-licenses-a-developers-guide-da722767b6f8"}, {"title": "A question about the license · ultralytics · Discussion #1260", "url": "https://github.com/orgs/ultralytics/discussions/1260"}, {"title": "YOLOv8: State-of-the-Art Computer Vision Model", "url": "https://yolov8.com/"}]

Based on the search results, I found relevant information about Ultralytics YOLO's AGPL licensing approach, though I didn't find specific references to Karthik Karunakaran in the results. Here's what the search revealed:

Ultralytics YOLO AGPL Licensing

If you use Ultralytics YOLO code, models, architectures, training pipelines, or trained/fine-

tuned models, you must either open-source your entire project under AGPL-3.0, or obtain an Ultralytics Enterprise License.

Impact on SaaS and Internal Deployment

The AGPL-3.0 license has significant implications for businesses:

- AGPL is stricter than GPL: Even cloud/SaaS deployments must be open-source modifications.
- Any internal company use of Ultralytics YOLO models (including modified YOLOv8) requires either an Enterprise License or open-sourcing your entire project under AGPL-3.0.
- The Ultralytics Enterprise License enables seamless integration of Ultralytics software and AI models into business products and services, including internal tools, automated workflows, and production deployments, bypassing the open-source requirements of AGPL-3.0.

Licensing Strategy

Ultralytics' licensing strategy is designed to ensure that any improvements to their open-source projects are returned to the community.

The search results did not contain specific information about Karthik Karunakaran in relation to this topic.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

Analysis of Page Content

The FAQ page you provided **does not contain any information about**:

- Commercial or SaaS use of YOLO
- AGPL-3.0 licensing requirements
- Network/API distribution obligations
- Enterprise License requirements

The page focuses exclusively on technical topics like installation, training, inference, deployment, and model comparison between YOLO11 and YOLO26.

To get answers about licensing and commercial use, you would need to consult Ultralytics' actual licensing documentation or terms of service, which are not included in this FAQ content.

Based on the search results, here are the key findings about YOLO License Examples from Ultralytics documentation:

License Options

Ultralytics offers two YOLO licenses: AGPL-3.0 and Enterprise.

AGPL-3.0 License

The AGPL-3.0 License is an OSI-approved open-source license ideal for students and enthusiasts, promoting open collaboration and knowledge sharing. This license is the right one for you if you are comfortable open-sourcing your entire project under AGPL-3.0.

Enterprise License Use Cases

An Enterprise License is required if you want to use Ultralytics YOLO without open-sourcing your entire project, including internal business tools or private company applications and customer-facing solutions where you do not want to publish code, configs, training scripts, and related components.

The Enterprise License enables seamless integration of Ultralytics software and AI models into business products and services, including internal tools, automated workflows, and production deployments, bypassing the open-source requirements of AGPL-3.0.

SaaS/Cloud Deployments

AGPL is stricter than GPL: Even cloud/SaaS deployments must be open-source modifications. This means that if you're deploying YOLO models in a SaaS environment without open-sourcing your code, you would need an Enterprise License.

Internal Company Use

Any internal company use of Ultralytics YOLO models (including modified YOLOv8) requires either an Enterprise License or open-sourcing your entire project under AGPL-3.0.

Web search results for query: "Ultralytics AGPL-3.0 "complete corresponding source code" "entire" derivative work network web service users"

Links: [{"title": "Ultralytics License", "url": "https://www.ultralytics.com/license"}, {"title": "Contributing to Ultralytics Open-Source Projects", "url": "https://docs.ultralytics.com/help/contributing/"}, {"title": "How to Contribute ? - Ultralytics Handbook", "url": "https://handbook.ultralytics.com/contributions/how-to-contribute/"}, {"title": "Can a company use the Ultralytics python library under the terms of the GPLv3? · Issue #21505 · ultralytics/ultralytics", "url": "https://github.com/ultralytics/ultralytics/issues/21505"}, {"title": "Please clarify how the new AGPL license is to be applied for prediction models · ultralytics · Discussion #2127", "url": "https://github.com/orgs/ultralytics/discussions/2127"}, {"title": "Is training dataset supposed to be made public as per the Ultralytics AGPL license · ultralytics · Discussion #15431", "url": "https://github.com/orgs/ultralytics/discussions/15431"}, {"title": "AGPL 3.0 Software License | Ultralytics", "url": "https://www.ultralytics.com/legal/agpl-3-0-software-license"}]

Based on the search results, here's what I found regarding Ultralytics' AGPL-3.0 license requirements:

Compliance Requirements

Under Ultralytics AGPL-3.0 guidance, compliance means publicly releasing the complete corresponding source code for the entire derivative work, including the larger application, modifications, scripts, configuration files, and, where applicable, model weights.

Derivative Works

If you use Ultralytics YOLO code or models (licensed under AGPL-3.0) in your project, the AGPL-3.0 license requires that your entire project (the derivative work) must also be licensed under AGPL-3.0 and its complete source code must be made publicly available.

Network Services

The AGPL-3.0 license requires that any modifications and the source code of the AGPL-licensed software (in this case, YOLOv8) be made available to users who interact with it over a network. Additionally, the entire application, including the model, weights, and configuration files, must be provided as it's considered a derivative work.

Alternative Options

If you do not want to open-source the full project, you need an Enterprise License.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

20. user (2026-05-30T03:12:38.831Z)

Web search results for query: "AGPL-3.0 section 13 network interaction remote users offer source code SaaS does not require distribution"

Links: [{"title":"Do I need to provide access to source code under the AGPLv3 license? | Opensource.com","url":"https://opensource.com/article/17/1/providing-corresponding-source-agplv3-license"}, {"title":"GNU Affero General Public License - GNU Project - Free Software Foundation","url":"https://www.gnu.org/licenses/agpl-3.0.en.html"}, {"title":"nxB on GPL 3.0 and Related License Compliance Issues ? Remote Network Interactio... | Hacker News","url":"https://news.ycombinator.com/item?id=20191211"}, {"title":"GNU Affero General Public License v3.0 or later | Software Package Data Exchange (SPDX)","url":"https://spdx.org/licenses/AGPL-3.0-or-later.html"}, {"title":"Reading AGPL ? /dev/lawyer","url":"https://writing.kemitchell.com/2021/01/24/Reading-AGPL"}, {"title":"GNU Affero General Public License ? Grokipedia","url":"https://grokipedia.com/page/GNU_Affero_General_Public_License"}, {"title":"GNU Affero General Public License - Wikipedia","url":"https://en.wikipedia.org/wiki/GNU_Affero_General_Public_License"}]

Based on the search results, here's what I found about AGPL-3.0 Section 13 regarding network interaction, remote users, and offering source code:

Key Points About AGPL-3.0 Section 13

The section states: "if you modify the Program, your modified version must prominently offer all users interacting with it remotely through a computer network (if your version supports such interaction) an opportunity to receive the Corresponding Source of your version by providing access to the Corresponding Source from a network server at no charge".

Important Qualifier: Modification Requirement

A crucial aspect of Section 13 is that the condition applies specifically "if you modify the Program". If you never modify the AGPL program?for example, downloading a blog platform, putting it on a server, running it unmodified, and opening the ports?you're operating a network server, but you don't have to offer any source code.

SaaS Context

This condition was intended to apply mainly to what would now be considered SaaS deployments. However, under GPLv3, operators may deploy unmodified or modified copies of the software on a server to provide services to remote users without any obligation to offer corresponding source code, as such use does not constitute distribution.

The Key Distinction

The critical point is that Section 13 does not automatically require distribution of source code simply because software is used as a SaaS. Rather, Section 13 defines network deployment of software as a form of distribution that invokes copyleft license conditions when the software is modified.
