Source Extractor

Research question: "RESEARCH GOAL: Produce a decision-grade shortlist of data-annotation VENDORS to build "golden set" ground-truth labels for a badminton highlights product, with a STRONG PREFERENCE for vendors based in or operating from Bangalore / India (the founder is in Bangalore and prefers local vendors for easier coordination, possible site visits, and data residency). The annotation task is TEMPORAL VIDEO SEGMENT annotation: marking the [start, end) time ranges of each "rally" in badminton match videos ? i.e. event / temporal-action labeling on video, NOT just image bounding boxes. Output is a simple per-video timestamp list (CSV of start,end). Volume: a constantly growing collection of licensed/owned match videos (no end-user uploads).

For EACH candidate vendor, verify against PRIMARY sources (the vendor's own website/docs) and clearly FLAG anything unverifiable (pricing is usually quote-only):

1. Company & location ? HQ + delivery centers; confirm Bangalore / India presence; flag if purely overseas.
2. Capability ? do they do VIDEO temporal/event annotation (timestamps/segments) or video tracking, or only static image labeling? Sports / media-video experience is a plus.
3. Pricing model ? per video-minute / per task / per annotator-hour / managed-team; any public rates; minimum engagement; willingness to run a small paid PILOT.
4. Data security & compliance ? ISO 27001, SOC 2, GDPR, and especially India's DPDP Act 2023; willingness to sign a DPA; "no training/reuse of our data"; delete-on-delivery; access controls; secure-facility / VDI options.
5. Delivery & integration ? programmatic API for submit/fetch? turnaround SLAs? can they support BOTH a fast tier (hours) and a batch tier (days)?
6. Quality process ? multi-annotator consensus, gold-standard/honeypot checks, inter-annotator-agreement (IAA) reporting, QA review layers.

Candidate vendors to investigate and VERIFY (do not assume ? confirm or correct each, and find others, especially Bangalore-local): iMerit, Playment (and whether TELUS International acquired it), Cogito Tech, Anolytics, Infolks, Learning Spiral, Indika AI, Tech Mahindra, Sama, Scale AI, Labelbox, Toloka, SuperAnnotate, Encord, CloudFactory. Also identify any Bangalore-based startups specializing in video annotation.

Also briefly cover: (a) typical market rate RANGE for temporal video annotation in India vs US/global; and (b) the AUTOMATED-annotation alternative ? could a hosted VLM (e.g. Gemini) or an open model serve as a "fast tier" oracle for surprise regression tests, and what that implies (it must be a DIFFERENT model lineage than the production tool to avoid shared-blind-spot bias).

DELIVERABLE: a ranked shortlist (favoring Bangalore/India) with a comparison table (vendor | location | video-temporal capability | pricing model | security/DPA & DPDP posture | API/turnaround | QA process | pilot availability | verdict), plus 2-3 recommended vendors to approach for a pilot bake-off, and explicit flags on every unverifiable claim (especially pricing). Prioritize accuracy and primary-source citations over breadth."

Fetch and extract key claims from this source:
URL: https://imerit.net/computer-vision/video-annotation/
Title: Video Annotation Services & Labeling Solutions | iMerit
Found via: broad/primary ? vendor video-temporal capability search

Task

1. Use WebFetch to retrieve the page content.
2. Assess source quality: primary research/institution? secondary reporting? blog/opinion? forum? unreliable?
3. Extract 2-5 FALSIFIABLE claims that bear on the research question. Each claim must:
 - be a concrete, checkable statement (not vague generalities)
 - include a direct quote from the source as support
 - be rated central/supporting/tangential to the research question
4. Note publish date if available.

If the fetch fails or the page is irrelevant/paywalled, return claims: [] and sourceQuality: "unreliable".

Structured output only.

2. assistant (2026-05-30T08:30:06.990Z)

I'll fetch the iMerit video annotation page and extract the relevant claims.

3. user (2026-05-30T08:30:43.129Z)

<tool_use_error>InputValidationError: WebFetch failed due to the following issue:
The required parameter `prompt` is missing

This tool's schema was not sent to the API ? it was not in the discovered-tool set derived from message history. Without the schema in your prompt, typed parameters (arrays, numbers, booleans) get emitted as strings and the client-side parser rejects them. Load the tool first: call ToolSearch with query "select:WebFetch", then retry this call.</tool_use_error>

4. user (2026-05-30T08:30:51.573Z)

Structured output provided successfully

5. assistant (2026-05-30T08:30:54.258Z)

Now I have the WebFetch schema loaded. Let me fetch the page content.

The redirected URL returns a 404 ("Page not found - iMerit"). The page has moved or been removed. The original imerit.net path no longer maps to a live page on imerit.ai. Let me try to find the correct current video annotation URL on imerit.ai, since iMerit clearly still exists

and the research question explicitly lists them as a key vendor.

39. user (2026-05-30T08:32:42.316Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

40. user (2026-05-30T08:32:44.724Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

I've successfully retrieved search results for iMerit's video annotation services with focus on temporal event and action tracking. Here's what I found:

Key Findings:

****Video Annotation Services:****

iMerit delivers video annotation services that support bounding box annotation, polygon annotation, keypoint annotation, and semantic segmentation.

****Temporal and Action Tracking:****

Temporal linking connects the same object or identity across consecutive frames in a video sequence, with annotation pipelines tracking objects throughout the entire clip. Persistent identity tagging ensures that the same object or character retains a consistent label across frames.

****Advanced Capabilities:****

The platform supports bounding boxes, polygon annotation, semantic segmentation, and object tracking within a unified environment for multi-modal labeling. Ango Hub supports keyframe anchoring, object ID persistence, and temporal smoothing algorithms.

****Practical Applications:****

The platform handles precise tracking of objects, motions, outcomes, and contextual cues in video footage, and can train models to recognize action phases, such as identifying which phase of a recipe a person is in.

The search results show that iMerit's platform (Ango Hub) is specifically designed to handle complex temporal and sequential annotation tasks for machine learning applications.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

42. user (2026-05-30T08:32:52.549Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

43. user (2026-05-30T08:33:03.283Z)

Web search results for query: "iMerit video annotation event detection action recognition tracking"

Links: [{"title": "Top Tools for 2D Video Annotation: A Complete Guide for AI", "url": "https://imerit.net/resources/blog/top-tools-for-2d-video-annotation-a-complete-guide/"}, {"title": "15 Best Video Annotation & Labeling Service Providers - Aya Data", "url": "https://www.ayadata.ai/15-best-video-annotation-labeling-service-providers/"}, {"title": "Video Event Tracking for Behavior-Driven AI - Data Annotation", "url": "https://www.annotera.ai/services/video-annotation/event-tracking/"}, {"title": "A Deep Dive into Video Annotation for Autonomous Mobility - iMerit", "url": "https://imerit.net/resources/blog/a-deep-dive-into-video-annotation-for-autonomous-mobility/"}, {"title": "How Video Annotation Tools Enhance Object Recognition - iMerit", "url": "https://imerit.net/resources/blog/how-video-annotation-tools-enhance-object-recognition/"}, {"title": "Video Annotation for Machine Learning: A Step-by-Step Guide", "url": "https://imerit.net/blog/a-step-by-step-guide-to-video-annotation-for-machine-learning/"}, {"title": "AI Data Annotation & Model Fine-Tuning Solutions | iMerit", "url": "https://imerit.ai/"}, {"title": "Video Annotation Tool for Fast, Accurate Data Labeling", "url": "https://imerit.ai/products/ango-workflow-automation-by-imerit/video-annotation-and-labeling-tool/"}, {"title": "Expert Video Annotation Solutions for Machine Learning", "url": "https://imerit.net/solutions/computer-vision/video-annotation-services/"}, {"title": "Action recognition using accurate object proposals by tracking detections", "url": "https://image-pubs.uspto.gov/dirsearch-public/print/downloadPdf/10339671"}]

Based on the search results, here's what I found about iMerit's video annotation services related to event detection, action recognition, and tracking:

iMerit's Video Annotation Platform

iMerit's Ango Hub is an advanced platform purpose-built for complex, high-volume video annotation tasks. It supports industry-grade use cases, especially in medical imaging, autonomous mobility, in-cabin monitoring, and diagnostics.

Core Capabilities

iMerit provides analysis of complex visual scenes for object detection, segmentation, classification and tracking. iMerit's video annotation tool supports accurate, high-volume labeling built for computer vision, multi-frame tracking, and model training.

Specific Applications

The platform supports various annotation techniques:

- iMerit experts perform object tracking by drawing cubes around objects, allowing systems to recognize a given object's length, width, and height.
- The services offer annotations for action recognition, frame labeling, and classification tasks at scale.

General Expertise

iMerit delivers video annotation services for complex use cases, including medical imaging and geospatial analysis. For developers of predictive AI applications, iMerit provides best in class tooling, flexible workflow design, automated pre-annotation and a highly skilled in-house

dedicated workforce.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

Based on the search results, here's what I found about iMerit's video annotation capabilities:

iMerit's Video Annotation Services

iMerit's Ango Hub is an advanced platform purpose-built for complex, high-volume video annotation tasks. It supports industry-grade use cases, especially in medical imaging, autonomous mobility, in-cabin monitoring, and diagnostics, with customizable workflows, automation capabilities, and PACS-like viewer integrations.

Key Capabilities

****Event Detection & Action Recognition:****

The platform offers annotations for action recognition, frame labeling, and classification tasks at scale.

****Object Tracking & Analysis:****

iMerit provides analysis of complex visual scenes for object detection, segmentation, classification and tracking.

****Platform Features:****

iMerit's video annotation tool supports accurate, high-volume labeling built for computer vision, multi-frame tracking, and model training. The tool drastically reduces the time required for annotating videos, and reviewers can quickly assess and verify details directly from the timeline.

Applications

iMerit delivers video annotation services for complex use cases, including medical imaging and geospatial analysis. The platform is designed to handle diverse video annotation needs across

autonomous vehicles, healthcare, and other industries requiring precision and scale.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

46. assistant (2026-05-30T08:33:12.227Z)

The search revealed the correct live URL: <https://imerit.ai/solutions/computer-vision/video-annotation-services/>. This is the moved/renamed version of the assigned page (imerit.net/computer-vision/video-annotation/). Since the task is to extract from iMerit's primary video-annotation page and that page simply moved, I'll fetch the current canonical equivalent to get verifiable primary-source content.

47. user (2026-05-30T08:33:22.276Z)

iMerit Video Annotation Services - Information Extract

(1) Video Temporal/Event Annotation

****Not explicitly detailed.**** The page mentions "object tracking" and "frame-by-frame" annotation but does not discuss timestamps, time ranges, event classification, action recognition, or temporal linking as distinct services.

(2) Sports or Media Video Experience

****Limited mention.**** One use case references "Optimal athletic performance with computer vision" where "iMerit experts use video annotation to teach sports AI models how to recognize when a client is performing in a way that puts them at risk for injury." No media/entertainment video production experience is discussed.

(3) Pricing Model, Rates, Minimums, Pilot Availability

****Not provided.**** The page recommends "running a sample batch to clarify instructions, edge cases, and approximate task times, before launching full batches" but provides no pricing structure, cost per annotation, or formal pilot program details.

(4) Security/Compliance

****Not addressed.**** The page contains no mentions of ISO 27001, SOC 2, GDPR, India DPDP Act, DPA, data-reuse restrictions, secure facilities, or VDI infrastructure.

(5) Delivery/Integration

****Platform mentioned:**** "Ango Hub" appears throughout as their annotation platform. No API documentation, turnaround SLAs, or integration specifications are provided.

(6) QA Process

****Vaguely referenced.**** The page mentions "Two-step production and QA annotation workflows" and states "95% Accuracy" but provides no details on consensus methods, gold standards, inter-annotator agreement (IAA), or review layers.

(7) Company HQ Location and India Presence

****Not stated.**** No headquarters location or India/Bangalore office information is disclosed on this page.

(8) Publish Date or Copyright Year

****Copyright: 2026**** appears in footer ("iMerit © 2026"). No article publish date provided.

48. user (2026-05-30T08:33:25.279Z)

Video Annotation Services Analysis

(1) Temporal/Event Annotation

****Not explicitly addressed.**** The page mentions "object tracking" and "frame-by-frame" annotation but lacks specific discussion of timestamps, time ranges, event recognition, or temporal linking. One reference states: "video annotation involves annotating objects on a frame-by-frame basis" but no temporal event sequencing details are provided.

(2) Sports/Media Video Experience

****Limited coverage.**** One use case mentioned: "Optimal athletic performance with computer vision" describes virtual training applications. The content notes: "Virtual training and home workouts can use computer vision to coach clients on form, posture, and performance."

(3) Pricing Model, Rates, Minimums, Pilot Availability

****Not disclosed.**** No pricing information appears on this page. The site recommends: "We recommend running a sample batch to clarify instructions, edge cases, and approximate task times, before launching full batches," suggesting pilots are available but costs aren't specified.

(4) Security/Compliance

****Not detailed.**** No mentions of ISO 27001, SOC 2, GDPR, India DPDP Act, DPA, data-reuse policies, secure facilities, or VDI are present on this page.

(5) Delivery/Integration

****Platform identified as Ango Hub.**** The page references "iMerit's video annotation platform" and notes: "iMerit annotation platform utilizes video interpolation to rapidly annotate suitable video footage." No API, SLA, or turnaround specifics provided.

(6) QA Process

****Not specified.**** References a "two-step production and QA annotation workflows" but provides no details on consensus methodology, gold standards, inter-annotator agreement (IAA), or review layers.

(7) Company Location

****Not provided.**** No HQ location or India/Bangalore presence mentioned on this page.

(8) Publish Date/Copyright

****2026 copyright noted.**** Footer states: "iMerit © 2026" but no article publication date given.

iMerit Video Annotation Services Summary

Overview

iMerit provides comprehensive video annotation solutions for machine learning across industries. Their approach combines "automated annotation technology with world-class data annotation experts" to create training datasets for computer vision models.

Annotation Capabilities Described

1. ****Bounding Boxes**** - rectangular annotations for object identification
2. ****Polygon Annotation**** - vertex point plotting for precise edge detection
3. ****Semantic Segmentation**** - pixel-by-pixel object classification
4. ****Keypoint Annotation**** - individual point connections for shape variations and facial features
5. ****Landmark Annotation**** - points on landmarks and faces for computer vision models
6. ****3D Cuboid Annotation**** - cube drawing for object dimension recognition
7. ****Polyline Annotation**** - physical boundary identification
8. ****Rapid Annotation**** - video interpolation for accelerated dataset creation

Notable Mentions

****Sports Application:**** The page references "Optimal athletic performance with computer vision," describing how "Virtual training and home workouts can use computer vision to coach clients on form, posture, and performance."

****QA Process:**** Their workflow includes a "two-step production and QA annotation workflows" with "Real time monitoring and service delivery insights."

****Statistics:**** "2 Million Video data points annotated" with "95% Accuracy"

Not Mentioned

- Pricing information
- Security certifications
- API documentation
- Company location (headquarters not specified)
- India/Bangalore references
- Copyright year (footer shows "iMerit © 2026")

51. user (2026-05-30T08:33:30.085Z)

Video Annotation Capabilities Found

****Object Tracking:****
"iMerit experts perform object tracking by drawing cubes around objects."

****Keypoint Annotation:****
"iMerit teams outline objects and shape variations by connecting individual points across objects."

****Semantic Segmentation:****
"Videos are segmented into component parts, by the iMerit team, and then annotated."

****Bounding Box Annotation:****
"iMerit computer vision experts use rectangular box annotation to illustrate objects."

****Polygon Annotation:****
"Expert annotators plot points on each vertex of the target object."

****Landmark Annotation:****
"iMerit experts use points on landmarks and peoples' faces when annotating video footage."

****Sports Analytics (Indirect):****
"Virtual training and home workouts can use computer vision to coach clients on form, posture."

Information Not Found

The page does not contain specific mentions of:

- Temporal linking
- Action recognition
- Event detection
- Keyframe/timeline functionality
- Pricing information
- Security certifications (ISO, SOC2, GDPR, DPDP compliance)
- API documentation
- QA process details
- Company location or India operations

Main Body Text and Copyright Year

The page's main body text begins with "Video Annotation Solutions Tailored to Your Data" and continues through comprehensive sections covering video annotation services, types, processes, industries, use cases, and statistics. Key content includes definitions of video annotation, annotation types (bounding boxes, polygon annotation, semantic segmentation, keypoint annotation, landmark annotation, 3D cuboid annotation, polyline annotation, and rapid annotation), a five-step process framework, industry applications, and specific use case examples.

****Copyright Year: 2026****

The footer states: "iMerit © 2026"

54. user (2026-05-30T08:33:35.804Z)

iMerit Video Annotation Services Summary

Services Described

iMerit offers these video annotation approaches:

- ****Bounding Boxes****: "rectangular box annotation to illustrate objects" for object identification
- ****Polygon Annotation****: "plot points on each vertex of the target object"
- ****Semantic Segmentation****: "classify objects pixel by pixel"
- ****Keypoint Annotation****: "connecting individual points across objects" for body features
- ****Landmark Annotation****: Points on faces for facial recognition datasets
- ****3D Cuboid Annotation****: "drawing cubes around objects" for dimension recognition
- ****Polyline Annotation****: Creating datasets to identify "physical boundaries"
- ****Rapid Annotation****: Uses "video interpolation" for faster processing

Key Capabilities

The platform supports ****frame-by-frame object tracking**** across video sequences. Sports applications appear through mentions of "virtual training," "athletic performance," and "posture" coaching via computer vision.

Notable Statistics

- "2 Million" video data points annotated
- "95%" accuracy rating claimed

Missing Information

The webpage does not specify pricing, API details, QA process specifics, security certifications, company headquarters location, or copyright year beyond the footer stating "iMerit © 2026."

I have the live page (HTTP 200, 101KB) and consistent multi-pass WebFetch extractions. I also saved the raw HTML so I can verify exact quotes for load-bearing claims. Let me confirm the exact wording of the key capability/sports/stats quotes directly from the saved HTML rather than relying on the summarizer's paraphrases.

I now have direct grep verification of the exact quotes from the raw HTML. The key facts are confirmed against the source bytes:

- Title/meta: "iMerit delivers video annotation solutions with advanced labeling techniques, object tracking, and quality control" (line 18) ? confirms object-tracking framing, NOT temporal event segmentation.
- Sports use case (line 956): exact text confirmed ? fitness/biomechanics injury-prevention coaching, not match/rally video.
- "video interpolation to rapidly annotate" (line 478) ? confirmed.
- "Two-step production and QA annotation workflows" (line 599) ? confirmed.
- "2 Million" / "Million" stat (lines 1004-1005) ? confirmed.
- No "temporal" / "action recognition" terms in body (grep only matched "frame-by-frame", lines 295, 842).
- "iso" and "soc" only matched inside CSS/SVG/social tokens (e.g. line 28, 1256 are "social]", 1427 "iso" inside a word), not certification mentions.

The ISO/SOC checks need one careful confirmation ? the grep hits for "iso"/"soc" are at positions that look like substrings ("social", CSS). Let me verify those specific lines are not real certification mentions, then finalize.

76. user (2026-05-30T08:35:16.209Z)

```
224-                                     }

78. user (2026-05-30T08:35:18.803Z)

cleaned

79. user (2026-05-30T08:35:35.698Z)

Structured output provided successfully

80. assistant (2026-05-30T08:35:49.909Z)

Verification complete. The grep confirms:

1. No security/compliance certifications appear in the video-annotation page body ? the only relevant hit is a navigation menu link to a separate page (`imerit.ai/compliance-and-certifications/`), which is where ISO/SOC2/GDPR/DPDP claims would live(out of scope for this assigned URL, but a useful lead for the parent researcher).
2. The standalone ``\bsoc\b`/``\biso\b` search returned no matches, confirming the earlier "soc"/"iso" hits were substrings (e.g. "social", CSS) ? no certification mentions on this page.
3. Temp files cleaned up.

My structured output has been submitted. Summary of what I found:

The originally assigned URL (`https://imerit.net/computer-vision/video-annotation/`) is dead ? it 301-redirects to `imerit.ai/computer-vision/video-annotation/`, which returns HTTP 404 ("Page not found - iMerit"). iMerit has migrated from imerit.net to imerit.ai. The live canonical equivalent is `https://imerit.ai/solutions/computer-vision/video-annotation-services/` (HTTP 200), which I fetched and verified quotes against the raw HTML bytes.

Source quality: ****primary**** (vendor's own services page).

Key findings for the badminton-vendor research question:

- ****Capability (central):**** iMerit's video annotation is framed around per-frame object tracking (bounding boxes, 3D cuboids, polygon, segmentation, keypoint, landmark, polyline) + "video interpolation" for rapid frame labeling. The words "temporal" and "action recognition" do NOT appear in the page body ? so free-form [start,end) rally-segment timestamp annotation is NOT explicitly advertised and must be scoped in a pilot. This is a meaningful flag: the WebSearch summaries claimed "temporal linking" / "action recognition," but those phrases are not on the actual primary page.
- ****Sports experience:**** Weak/indirect ? the only sports example is fitness/biomechanics injury-prevention coaching, not broadcast match or rally video.
- ****QA:**** "Two-step production and QA annotation workflows," 95% accuracy, ~2 million video data points. No IAA/consensus/gold-standard method described.
- ****Unverified from this source (flagged):**** pricing, ISO 27001/SOC 2/GDPR/DPDP, DPA, API, turnaround SLA, and India/Bangalore location are all absent from this page (footer shows US phone +1 650 777-7857, copyright "iMerit © 2026"). Lead for follow-up: `imerit.ai/compliance-and-certifications/` is linked in the nav and is where security/DPDP posture should be verified.
