Adversarial Claim Verifier (voter 3/3)

Be SKEPTICAL. Try to REFUTE this claim. ?2/3 refutations kill it.

Research question

Find promising AND reliable open-source tools/libraries for parsing Indian bank statement PDFs ? especially HDFC Bank savings/transaction statements ? into structured transaction rows (date, narration, ref, value date, withdrawal, deposit, closing balance), for reuse in a LOCAL-FIRST Python personal-finance tool ("muneem").

HARD CONSTRAINTS (a tool that violates these is unusable for us):

1. Must run 100% LOCALLY. Bank statements are highly sensitive ? NO cloud APIs, NO paid SaaS (e.g. bankstatementconverter.com, docparser, LLM extraction APIs). Paid/cloud is not acceptable even as a default.
2. Must be usable from Python.
3. License MUST be permissive & commercially safe: MIT, BSD, Apache-2.0, ISC, HPND. AVOID and explicitly FLAG anything GPL/LGPL/AGPL or that depends on copyleft native components ? in particular Camelot/tabula's reliance on Ghostscript (AGPL) or a Java runtime. PyMuPDF (AGPL) is already banned for us.

Specifically evaluate and compare these table-extraction approaches, for each giving: license (AND license of native deps), maintenance status (latest release + activity as of 2025/2026), reliability on SEMI-RULED / partially-borderless tables (HDFC's transaction table is not fully line-ruled), and password-protected-PDF support:

- pdfplumber (we already use it; MIT)
- Camelot ? camelot-py vs the maintained "pypdf_table_extraction" fork; its Ghostscript/OpenCV deps
- tabula-py (tabula-java + JVM)
- pypdfium2-based table extraction
- any other notable local options

Also assess the user's idea: "convert the PDF table to Excel/CSV first, then parse" ? is an intermediate CSV/Excel extraction more reliable than direct coordinate/text parsing, and which LOCAL+permissive tools do PDF?CSV/Excel table conversion well?

Finally, search for any existing, maintained, permissively-licensed open-source projects specifically for parsing Indian bank statements (HDFC/ICICI/SBI/Axis) or bank statements generally, that we could reuse or learn from (GitHub/PyPI).

Deliver a ranked shortlist of the most promising + reliable + license-safe options for HDFC statement parsing in a local Python tool, each with its license (and native-dep licenses), maintenance status, strengths/weaknesses for this use case, and a concrete recommendation for muneem (reuse library X vs. hand-roll coordinate clustering with pdfplumber). Cite sources.

Claim under review

"pypdf_table_extraction (the py-pdf community Camelot fork) was deprecated and archived (read-only) on April 11, 2025, with users explicitly redirected to use camelot-py instead ? so it is NOT a maintained alternative as of 2025/2026."

****Source:**** https://github.com/py-pdf/pypdf_table_extraction (primary)

****Supporting quote:**** "This project is deprecated and no longer actively maintained. Please use [camelot-py](<https://github.com/camelot-dev/camelot>) instead. ... Camelot-py is the actively maintained successor to this library and provides robust PDF table extraction capabilities."

Checklist

1. Is the claim actually supported by the quote, or is it an overreach/misread?
2. WebSearch for contradicting evidence ? does any credible source dispute or heavily qualify this?
3. Is the source quality sufficient for the claim's strength? (extraordinary claims need primary sources)
4. Is the claim outdated? (check dates ? old claims about fast-moving fields are suspect)
5. Is this a marketing claim / press release / cherry-picked benchmark / forum speculation?

****refuted=true**** if: unsupported by quote / contradicted / low-quality source for strong claim / outdated / marketing fluff.

****refuted=false**** ONLY if: claim is well-supported, current, and source quality matches claim strength.

Default to refuted=true if uncertain.

Structured output only. Evidence MUST be specific.

2. assistant (2026-05-30T19:17:39.003Z)

I'll verify this claim about pypdf_table_extraction being deprecated and archived. Let me check the primary source and search for contradicting evidence.

3. assistant (2026-05-30T19:17:41.685Z)

Let me fetch the primary source and search for contradicting evidence in parallel.

4. user (2026-05-30T19:17:46.454Z)

Repository Status

****Yes, this repository is archived and deprecated.****

****Deprecation Notice:****

The README clearly states: **"This project is deprecated and no longer actively maintained."** It directs users to migrate: **"Please use camelot-py instead. Camelot-py is the actively maintained successor to this library."**

****Archive Date:****

The repository was archived on ****April 11, 2025****, as indicated by the notice: **"This repository was archived by the owner on Apr 11, 2025. It is now read-only."**

****Redirect Information:****

The deprecation notice provides installation guidance for the replacement: **"pip install camelot-py"** and links to the successor project at <https://github.com/camelot-dev/camelot>.

```

Here are the search results for your query about pypdf_table_extraction, its deprecation status, and its relationship to camelot-py:

Key Findings:

****Deprecation Status:****

The pypdf_table_extraction project is deprecated and no longer actively maintained, with users directed to use camelot-py instead.

****Repository Archived:****

The pypdf_table_extraction repository was archived by the owner on April 11, 2025. It is now read-only.

****PyPI Package Status:****

The PyPI package page displays "DEPRECATED - Please use camelot-py instead."

****Relationship to Camelot-py:****

The pypdf_table_extraction repository was forked from camelot-dev/camelot. Camelot-py is the actively maintained successor to this library and provides robust PDF table extraction capabilities.

The pypdf_table_extraction package was a Python library for extracting tables from PDFs, but development has ceased in favor of the actively maintained camelot-py project.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

6. assistant (2026-05-30T19:17:55.950Z)

The claim is strongly corroborated by both the primary source (the GitHub repo itself) and the PyPI page. Let me verify two potential weak points before concluding: (1) the exact archive date, and (2) whether there's a nuance ? the claim says pypdf_table_extraction is "NOT a maintained alternative," but the research question framed it as "the maintained fork." Let me check the PyPI page and the camelot-py status to ensure the redirect direction is accurate (i.e., that camelot-py is genuinely the maintained one, not the reverse).

7. user (2026-05-30T19:17:59.018Z)

I cannot answer your questions based on the provided content. The web page shown contains only an error message stating that "A required part of this site couldn't load," which prevents me from accessing information about deprecation status, alternative package recommendations, or release details.

To obtain the information you're seeking about a PyPI package's deprecation status, recommended alternatives, and version history, you would need to access a working version of the PyPI page directly.

8. user (2026-05-30T19:18:00.375Z)

Camelot-py Latest Release Information

****Latest Release:**** Version 1.0.9, released August 10, 2025.

****Active Maintenance Status:**** The project shows signs of ongoing development. A pre-release version 2.0.0rc1 is scheduled for May 25, 2026, indicating continued activity beyond 2025.

****Successor Status:**** The documentation does not mention being a successor to pypdf_table_extraction. Camelot-py is presented as an independent "PDF Table Extraction for Humans" library with its own GitHub repository and development history dating back to 2018.

9. assistant (2026-05-30T19:18:03.764Z)

The PyPI page for pypdf-table-extraction failed to load, but I have strong confirmation from two independent sources already. Let me do one final check ? confirm the archive date and deprecation directly via the GitHub API to eliminate any chance the WebFetch model hallucinated the date, and verify the redirect direction is to the actively-maintained camelot-py.

10. user (2026-05-30T19:18:05.966Z)

```
archived: True
archived_at: None
disabled: False
pushed_at: 2025-04-08T01:40:56Z
description: A Python library to extract tabular data from PDFs
```

11. assistant (2026-05-30T19:18:15.873Z)

The GitHub API confirms `archived: True` and the last push was April 8, 2025 (consistent with an April 11, 2025 archive date). The repository is definitively archived/read-only. All three independent sources (GitHub repo README, GitHub API, PyPI search snippet, plus camelot-py's active release history showing v1.0.9 in Aug 2025 and v2.0.0rc1 in May 2026) align perfectly.

Now let me assess the claim against the checklist:

1. ****Supported by quote?**** Yes. The quote says "deprecated and no longer actively maintained. Please use camelot-py instead." The archive notice ("archived by the owner on Apr 11, 2025. It is now read-only") is independently confirmed by WebFetch and the GitHub API (`archived: True`).
2. ****Contradicting evidence?**** None found. The PyPI snippet, GitHub README, and GitHub API all agree. camelot-py is genuinely active (v1.0.9 Aug 2025, v2.0.0rc1 May 2026), so the redirect points to a genuinely-maintained successor ? the direction of the claim is correct.
3. ****Source quality?**** Primary source (the repo itself + GitHub's authoritative API). Highest possible quality for this kind of factual claim.
4. ****Outdated?**** No. Archive date is April 2025; verification is current as of May 2026. The status is stable (archived repos don't un-archive).
5. ****Marketing/speculation?**** No. It's a factual administrative status (GitHub archive flag), machine-verifiable.

One subtle nuance worth flagging: the claim is narrowly about whether pypdf_table_extraction is maintained ? it is NOT. The claim is accurate on its own terms. (The broader research question's premise that it's "the maintained fork" is what's actually wrong; this claim correctly corrects that.) The claim itself is fully supported.

The claim survives my adversarial scrutiny. It is well-supported, current, and backed by primary sources.

12. user (2026-05-30T19:18:21.881Z)

Structured output provided successfully

13. assistant (2026-05-30T19:18:27.177Z)

Verification complete. The claim is ****not refuted**** ? it survives adversarial scrutiny with high confidence.

The claim that pypdf_table_extraction was deprecated and archived (read-only) on April 11, 2025, with users redirected to camelot-py, is confirmed by three independent sources:

- ****GitHub API**** (authoritative): `archived: true`, last push 2025-04-08 (consistent with the Apr 11 archive date)
- ****Repo README**** (primary): verbatim deprecation notice and read-only archive statement
- ****PyPI****: "DEPRECATED - Please use camelot-py instead"

The redirect direction is also correct: camelot-py is genuinely the maintained successor (v1.0.9 in Aug 2025, v2.0.0rc1 in May 2026), so the fork is the dead one. The only nuance ? which strengthens rather than weakens the claim ? is that it correctly corrects the research question's mistaken premise that pypdf_table_extraction is "the maintained fork."
