Source Extractor

Research question: "Find promising AND reliable open-source tools/libraries for parsing Indian bank statement PDFs ? especially HDFC Bank savings/transaction statements ? into structured transaction rows (date, narration, ref, value date, withdrawal, deposit, closing balance), for reuse in a LOCAL-FIRST Python personal-finance tool ("muneem").

HARD CONSTRAINTS (a tool that violates these is unusable for us):

1. Must run 100% LOCALLY. Bank statements are highly sensitive ? NO cloud APIs, NO paid SaaS (e.g. bankstatementconverter.com, docparser, LLM extraction APIs). Paid/cloud is not acceptable even as a default.
2. Must be usable from Python.
3. License MUST be permissive & commercially safe: MIT, BSD, Apache-2.0, ISC, HPND. AVOID and explicitly FLAG anything GPL/LGPL/AGPL or that depends on copyleft native components ? in particular Camelot/tabula's reliance on Ghostscript (AGPL) or a Java runtime. PyMuPDF (AGPL) is already banned for us.

Specifically evaluate and compare these table-extraction approaches, for each giving: license (AND license of native deps), maintenance status (latest release + activity as of 2025/2026), reliability on SEMI-RULED / partially-borderless tables (HDFC's transaction table is not fully line-ruled), and password-protected-PDF support:

- pdfplumber (we already use it; MIT)
- Camelot ? camelot-py vs the maintained "pypdf_table_extraction" fork; its Ghostscript/OpenCV deps
- tabula-py (tabula-java + JVM)
- pypdfium2-based table extraction
- any other notable local options

Also assess the user's idea: "convert the PDF table to Excel/CSV first, then parse" ? is an intermediate CSV/Excel extraction more reliable than direct coordinate/text parsing, and which LOCAL+permissive tools do PDF?CSV/Excel table conversion well?

Finally, search for any existing, maintained, permissively-licensed open-source projects specifically for parsing Indian bank statements (HDFC/ICICI/SBI/Axis) or bank statements generally, that we could reuse or learn from (GitHub/PyPI).

Deliver a ranked shortlist of the most promising + reliable + license-safe options for HDFC statement parsing in a local Python tool, each with its license (and native-dep licenses), maintenance status, strengths/weaknesses for this use case, and a concrete recommendation for muneem (reuse library X vs. hand-roll coordinate clustering with pdfplumber). Cite sources."

Fetch and extract key claims from this source:

****URL:**** <https://github.com/jsvine/pdfplumber>

****Title:**** pdfplumber ? official repository (jsvine)

****Found via:**** practitioner ? encrypted PDF support search

Task

1. Use WebFetch to retrieve the page content.
2. Assess source quality: primary research/institution? secondary reporting? blog/opinion? forum? unreliable?
3. Extract 2-5 FALSIFIABLE claims that bear on the research question. Each claim must:
 - be a concrete, checkable statement (not vague generalities)
 - include a direct quote from the source as support
 - be rated central/supporting/tangential to the research question
4. Note publish date if available.

If the fetch fails or the page is irrelevant/paywalled, return claims: [] and sourceQuality: "unreliable".

Structured output only.

2. assistant (2026-05-30T19:11:50.943Z)

I'll fetch the pdfplumber repository page and extract relevant claims for the research question.

pdfplumber: Bank Statement PDF Parsing Analysis

1. Software License

****MIT License**** ? explicitly stated in the repository footer and as a topic tag.

2. Dependencies and Licenses

****Primary dependency:**** `pdfminer.six`
- pdfplumber description: "Built on [pdfminer.six](https://github.com/goulu/pdfminer)."
- pdfminer.six license: ****MIT**** ? the documentation notes "License: [MIT](https://github.com/pdfminer/pdfminer.six?tab=MIT-1-ov-file)."

3. Table Extraction & Borderless Tables

pdfplumber offers robust table detection with multiple strategies:
- ****Default approach:**** "Use the page's graphical lines ? including the sides of rectangle objects ? as the borders of potential table-cells."
- ****Text-based fallback:**** "Deduce the (imaginary) lines that connect the left, right, or center of words on the page, and use those lines as the borders of potential table-cells."

This dual-strategy design allows extraction from tables with and without visible gridlines.

4. Password-Protected PDFs

****Supported.**** The documentation states: "To load a password-protected PDF, pass the `password` keyword argument, e.g., `pdfplumber.open("file.pdf", password = "test")`."

5. Maintenance Status

- ****Latest release:**** v0.11.9 (January 5, 2026)
- ****Repository activity:**** 42 releases total; 790 commits on stable branch
- ****Status:**** Active development with current maintainers listed

6. Local Execution

****Fully local**** ? no cloud integration mentioned. All parsing occurs via `pdfminer.six` and local Python processing.

7. Python Version Support

"Currently [tested](/jsvine/pdfplumber/blob/stable/tests) on [Python 3.10, 3.11, 3.12, 3.13, 3.14](/jsvine/pdfplumber/blob/stable/.github/workflows/tests.yml)."

4. assistant (2026-05-30T19:12:06.670Z)

I have the content I need. Let me assess the source and extract claims.

This is the official pdfplumber GitHub repository (jsvine is the maintainer) ? a primary source for facts about the library itself. The claims directly bear on the research question's hard constraints (local, Python, permissive license) and the specific evaluation criteria (pdfplumber license, semi-ruled tables, password support, maintenance status).

5. user (2026-05-30T19:12:14.505Z)

Structured output provided successfully

6. assistant (2026-05-30T19:12:20.851Z)

Done. Extracted 5 falsifiable claims from the official pdfplumber repository (a primary source). Key findings for the muneem research question:

- **License (central):** MIT, built on MIT-licensed pdfminer.six ? clean permissive chain, no copyleft native deps in the parsing path.
- **Semi-ruled tables (central):** Supports text-based border inference for borderless/partially-ruled tables, directly relevant to HDFC's transaction table.
- **Encrypted PDFs (central):** Native `password=` argument support.
- **Maintenance (supporting):** Active, v0.11.9 released 2026-01-05.
- **Local + Python (supporting):** Fully local, tested on Python 3.10?3.14.

All three hard constraints (100% local, Python-usable, permissive license) are satisfied by this source's evidence.
