Adversarial Claim Verifier (voter 1/3)

Be SKEPTICAL. Try to REFUTE this claim. ?2/3 refutations kill it.

Research question

Find promising AND reliable open-source tools/libraries for parsing Indian bank statement PDFs ? especially HDFC Bank savings/transaction statements ? into structured transaction rows (date, narration, ref, value date, withdrawal, deposit, closing balance), for reuse in a LOCAL-FIRST Python personal-finance tool ("muneem").

HARD CONSTRAINTS (a tool that violates these is unusable for us):

1. Must run 100% LOCALLY. Bank statements are highly sensitive ? NO cloud APIs, NO paid SaaS (e.g. bankstatementconverter.com, docparser, LLM extraction APIs). Paid/cloud is not acceptable even as a default.
2. Must be usable from Python.
3. License MUST be permissive & commercially safe: MIT, BSD, Apache-2.0, ISC, HPND. AVOID and explicitly FLAG anything GPL/LGPL/AGPL or that depends on copyleft native components ? in particular Camelot/tabula's reliance on Ghostscript (AGPL) or a Java runtime. PyMuPDF (AGPL) is already banned for us.

Specifically evaluate and compare these table-extraction approaches, for each giving: license (AND license of native deps), maintenance status (latest release + activity as of 2025/2026), reliability on SEMI-RULED / partially-borderless tables (HDFC's transaction table is not fully line-ruled), and password-protected-PDF support:

- pdfplumber (we already use it; MIT)
- Camelot ? camelot-py vs the maintained "pypdf_table_extraction" fork; its Ghostscript/OpenCV deps
- tabula-py (tabula-java + JVM)
- pypdfium2-based table extraction
- any other notable local options

Also assess the user's idea: "convert the PDF table to Excel/CSV first, then parse" ? is an intermediate CSV/Excel extraction more reliable than direct coordinate/text parsing, and which LOCAL+permissive tools do PDF?CSV/Excel table conversion well?

Finally, search for any existing, maintained, permissively-licensed open-source projects specifically for parsing Indian bank statements (HDFC/ICICI/SBI/Axis) or bank statements generally, that we could reuse or learn from (GitHub/PyPI).

Deliver a ranked shortlist of the most promising + reliable + license-safe options for HDFC statement parsing in a local Python tool, each with its license (and native-dep licenses), maintenance status, strengths/weaknesses for this use case, and a concrete recommendation for muneem (reuse library X vs. hand-roll coordinate clustering with pdfplumber). Cite sources.

Claim under review

"xaneem/hdfc-credit-card-statement-parser parses HDFC Bank CREDIT CARD statements specifically (not savings/transaction statements), extracting structured fields including date, narration, amount, Cr/Dr indicator, and forex amount/rate."

****Source:**** <https://github.com/xaneem/hdfc-credit-card-statement-parser> (primary)

****Supporting quote:**** "Extracts information from an HDFC Bank Credit Card statement."

Checklist

1. Is the claim actually supported by the quote, or is it an overreach/misread?
2. WebSearch for contradicting evidence ? does any credible source dispute or heavily qualify this?
3. Is the source quality sufficient for the claim's strength? (extraordinary claims need primary sources)
4. Is the claim outdated? (check dates ? old claims about fast-moving fields are suspect)
5. Is this a marketing claim / press release / cherry-picked benchmark / forum speculation?

****refuted=true**** if: unsupported by quote / contradicted / low-quality source for strong claim / outdated / marketing fluff.

****refuted=false**** ONLY if: claim is well-supported, current, and source quality matches claim strength.

Default to refuted=true if uncertain.

Structured output only. Evidence MUST be specific.

2. assistant (2026-05-30T19:17:53.709Z)

I'll verify this claim about the xaneem/hdfc-credit-card-statement-parser repository. Let me start by loading the web tools and examining the primary source.

3. assistant (2026-05-30T19:17:57.313Z)

I'll fetch the primary source repository to verify the claim about what fields it extracts.

4. user (2026-05-30T19:18:02.028Z)

HDFC Credit Card Statement Parser

****What it parses:**** Credit card statements specifically (not savings or bank accounts).

****Fields extracted:**** According to the README, it extracts:

- Transaction date and narration
- Amount with Cr/Dr indicator
- Forex amount and forex rate for foreign transactions

****Verbatim description:**** "Extracts information from an HDFC Bank Credit Card statement. This will help copy structured data out of your statement."

****Technology & License:****

- ****Language:**** Python (97.7% of codebase)
- ****Library:**** Uses PyPDF2 (inferred from requirements) for PDF processing
- ****License:**** MIT license

The tool also notes it "does not guarantee accuracy" and advises users to "Always cross check extracted data with your pdf for mistakes."

HDFC Bank Credit Card Statement Parser README

Here's the full README verbatim:

```

> # HDFC Bank Credit Card Statement Parser
>
> Extracts information from an HDFC Bank Credit Card statement. This will help copy structured
data out of your statement.
>
> > This was built for personal use and does not guarantee accuracy. Always cross check
extracted data with your pdf for mistakes
>
> ## Usage
> 1. Setup a virtual env and activate a virtual environment (optional)
>     ```
>     $ sudo apt install -y python3-venv
>     $ python3 -m venv env
>     $ source env/bin/activate
>     ```
>
> 2. Install requirements
>     ```
>     $ pip install -r requirements.txt
>     ```
>
> 3. Copy credit card statement PDFs to `./input/` folder
>
> 4. Update the password in `run.sh`
>
> 5. Run the script `./run.sh`
>
>     Sample output:
>     ```
>     Processing: ./input/2021-09-10.PDF
>     Processed ./input/2021-09-10.PDF. Total due should be 39432.229999999996
>     Output file: ./output/2021-09-10.csv
>     ```
>
>     Example of the output csv is shown in `example-output.csv` in this repo.
>
> 6. Cross check the data and make sure the extracted information is correct.
>
> ## Notes
> - It extracts both Indian and Foreign transactions. For Foreign transactions, the Forex Amount
and Forex Rate is also extracted
> - Cr/Dr column is also included
> - I might have missed out testing for some types of transactions in the statement. Create a PR
if you had to fix something to make it work for you

```

Extracted Fields

The documentation confirms extraction of: **Cr/Dr column**, **Forex Amount**, and **Forex Rate**. However, it does not explicitly list date or narration in the fields mentioned.

6. assistant (2026-05-30T19:18:09.099Z)

The README confirms most of the claim, but I should verify the specific fields (date, narration, amount) by examining the actual source code and example output, since the README "Notes" section only explicitly mentions Cr/Dr, Forex Amount, and Forex Rate. Let me check the actual code and the example CSV output.

7. user (2026-05-30T19:18:13.650Z)

Column Headers and Sample Row Analysis

```

**Column Headers:**
`date, currency, description, forex_amount, forex_rate, amount, type`

```

****Sample Row:****

`01/09/2021 16:02, USD, DIGITALOCEAN.COM NEW YORK CIT, 24.48, 73, 1,787.02, Dr`

****Assessment:****

Yes, this dataset includes all the requested columns:

- ****Date**** ? (e.g., "11/08/2021 13:40")
- ****Description/Narration**** ? (e.g., "NETBANKING TRANSFER")
- ****Amount**** ? (e.g., "40,146.00")
- ****Cr/Dr Indicator**** ? (Credit or Debit designation)
- ****Forex Amount**** ? (e.g., "24.48" for USD transactions)
- ****Forex Rate**** ? (e.g., "73" conversions)

The data appears to be a bank transaction ledger with both domestic INR transactions and international USD transactions with corresponding exchange rates.

Based on the search results, I found the GitHub repository you're looking for:

****Repository: xaneem/hdfc-credit-card-statement-parser****

This project extracts information from an HDFC Bank Credit Card Statement (India). It helps copy structured data out of your statement.

****Key Features:****

- Extracts both Indian and Foreign transactions, with Forex Amount and Forex Rate also extracted for foreign transactions
- Outputs data in CSV format

****Important Notes:****

- This was built for personal use and does not guarantee accuracy
- You should cross check the extracted data and make sure the information is correct

The repository is available at: <https://github.com/xaneem/hdfc-credit-card-statement-parser>

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

9. assistant (2026-05-30T19:18:19.001Z)

I now have strong corroborating evidence. The search result title from GitHub itself confirms "Extracts information from an HDFC Bank Credit Card Statement (India)". Let me do one final cross-check by examining the actual parser source code to confirm the field extraction is real (not just README marketing) and verify it parses credit card statements specifically.

10. user (2026-05-30T19:18:20.490Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

11. assistant (2026-05-30T19:18:24.011Z)

The filename guess was wrong (404). The example-output.csv I already retrieved is the load-bearing artifact ? it directly shows the actual output columns. Let me do a quick confirmation of the repo's file listing to be thorough.

12. user (2026-05-30T19:18:26.736Z)

Repository Information

Description: "Extracts information from an HDFC Bank Credit Card Statement (India)"

License (SPDX ID): MIT

Default Branch: main

Visibility: Yes, this repository is public

13. assistant (2026-05-30T19:18:40.527Z)

I have sufficient evidence to evaluate the claim. Let me assess against the checklist.

Claim: "xaneem/hdfc-credit-card-statement-parser parses HDFC Bank CREDIT CARD statements specifically (not savings/transaction statements), extracting structured fields including date, narration, amount, Cr/Dr indicator, and forex amount/rate."

Evidence gathered:

1. **Credit card, not savings** ? CONFIRMED by multiple primary sources: README title "HDFC Bank Credit Card Statement Parser", GitHub API repo description "Extracts information from an HDFC Bank Credit Card Statement (India)", README usage step "Copy credit card statement PDFs to `./input/` folder". Nothing indicates savings/transaction account parsing.

2. **Fields (date, narration, amount, Cr/Dr, forex amount/rate)** ? CONFIRMED by the `example-output.csv` actual output artifact, whose headers are: `date, currency, description, forex\_amount, forex\_rate, amount, type` with sample row `01/09/2021 16:02, USD, DIGITALOCEAN.COM NEW YORK CIT, 24.48, 73, 1,787.02, Dr`. This maps precisely: date ?, narration=description ?, amount ?, Cr/Dr=type column ("Dr") ?, forex_amount ?, forex_rate ?. The README "Notes" also explicitly state "For Foreign transactions, the Forex Amount and Forex Rate is also extracted" and "Cr/Dr column is also included."

Checklist results:

- Supported by quote? Yes ? and exceeded. The supporting quote alone was thin (didn't list fields), but the actual CSV output artifact independently confirms every claimed field.
- Contradicting evidence? None found. Multiple independent primary-source surfaces (README, repo description, example CSV) agree.
- Source quality? Primary source (the repo itself) ? appropriate for this claim strength. License is MIT (relevant to muneem's constraints).
- Outdated? The claim is about what the tool *does*, not a fast-moving benchmark; the artifact

(statement from 2021) and structure are stable. The claim makes no time-sensitive assertion.
5. Marketing/cherry-pick? No ? it's a personal-use repo description plus its own committed output file. The README is candid ("does not guarantee accuracy").

One minor nuance: the term "narration" is the claim's wording; the tool labels the column "description". These are equivalent for credit-card statements (the human-readable transaction text). This is faithful paraphrase, not overreach. The claim is well-supported and accurate.

14. user (2026-05-30T19:18:48.660Z)

Structured output provided successfully

15. assistant (2026-05-30T19:18:55.725Z)

Claim verified as accurate (refuted=false, high confidence). The repository xaneem/hdfc-credit-card-statement-parser does parse HDFC Bank credit card statements specifically and extracts date, description (narration), amount, Cr/Dr type, forex amount, and forex rate ? confirmed by the committed example-output.csv output artifact, the README, and the GitHub repo description. MIT licensed.
