1. user (2026-06-14T06:32:15.328Z)

In the current repo, run git to confirm presence on the remote default branch and that nothing was deleted. Check: are
backend/pipeline/detectors/{person_detector,fusion_features,audio_features}.py,
backend/pipeline/audio/hit_detector.py, backend/pipeline/segmenters/fusion_hybrid.py,
backend/eval/{fusion_golden,fusion_compare,fusion_audio,experiment}.py all tracked and present on origin/master (use 'git ls-files' and 'git log origin/master -1 -- <file>')? Does eval_baselines/experiment_leaderboard.json exist and contain the recorded P3/P4 fusion rows? Return present=true only if all are tracked on origin/master; default_off/no_special_casing/retained = true if nothing was removed. Evidence = git output snippets.

2. assistant (2026-06-14T06:32:18.309Z)

I'll verify the presence and tracking status of these files on origin/master. Let me start by fetching the latest remote state and running the checks.

3. user (2026-06-14T06:32:22.121Z)

```

backend/pipeline/segmenters/fusion_hybrid.py
```

5. assistant (2026-06-14T06:32:26.216Z)

All target source files are tracked. Now let me verify they're on origin/master (not just the local branch), check the leaderboard JSON content, and confirm nothing was deleted.

6. user (2026-06-14T06:32:29.324Z)

```
=== backend/pipeline/detectors/person_detector.py ===
351a27e perf(eval): single-pass person detection for fusion_golden (~10x faster extraction)
(#125)
=== backend/pipeline/detectors/fusion_features.py ===
cbf2236 feat(segmenters): FusionSegmenter ? shuttle + net-crossing + person-cue fusion (P2,
default-OFF) (#117)
=== backend/pipeline/detectors/audio_features.py ===
dc19bf2 feat(eval): fusion P4 ? audio cue + incremental-lift measurement (default-OFF) (#122)
=== backend/pipeline/audio/hit_detector.py ===
df9cf80 ci: add mypy lane (lenient green baseline + explicit quarantine list) (#93)
=== backend/pipeline/segmenters/fusion_hybrid.py ===

8. assistant (2026-06-14T06:32:33.912Z)

All 9 source files are present in the origin/master tree with commit history. But `eval\_baselines/experiment\_leaderboard.json` did NOT appear in the `git ls-tree origin/master` output, and its `git log origin/master` line was empty. Let me investigate this file specifically.

9. user (2026-06-14T06:32:37.522Z)

```
===ls-files tracked?===

```

11. assistant (2026-06-14T06:32:42.197Z)

Important finding: `eval\_baselines/experiment\_leaderboard.json` exists on disk but is NOT tracked in git at all (not in origin/master, not in HEAD, not in the index, and not gitignored ? it's an untracked working-tree file). Let me inspect its content to check for the P3/P4 fusion rows, and confirm its git status.

12. user (2026-06-14T06:32:43.856Z)

```

```

I now have the complete picture. Let me compile the findings.

****Summary of findings:****

1. ****9 source/eval files**** ? all tracked and present on `origin/master` (confirmed via `git ls-files`, `git ls-tree -r origin/master`, and `git log origin/master -1 -- <file>` each returning a real commit). Their tests are also present.

2. ****`eval\_baselines/experiment\_leaderboard.json`**** ? exists on disk (2506 bytes) with ****both P3 and P4 fusion rows**** (row 1: `shuttle\_only` vs `shuttle\_person\_fusion`; row 2: `shuttle\_person` vs `shuttle\_person\_audio`, both with `honest\_delta\_f1`). But it is ****NOT tracked in git**** ? `git status` shows it as untracked (`??`), and `git cat-file -e origin/master:...` / `HEAD:...` both fail with "exists on disk, but not in origin/master/HEAD". It is not gitignored either.

The strict gate in the task ? "Return present=true only if all are tracked on origin/master" ? fails because the leaderboard JSON is not tracked. The current branch is `docs/i3-fusion-measured` (1 commit ahead of origin/master, 1 behind ? diverged but not deleting anything).

Nothing was deleted: every queried path either exists in origin/master or exists as a new untracked working-tree file. The default-OFF posture is intact (commit messages explicitly mark P2/P4 fusion as default-OFF), no special-casing was introduced, and all retained.

15. user (2026-06-14T06:33:09.828Z)

Structured output provided successfully

16. assistant (2026-06-14T06:33:13.305Z)

I've completed the verification and returned the structured result. Key finding: the 9 source/eval files are all tracked and present on origin/master, but `eval\_baselines/experiment\_leaderboard.json` is an untracked working-tree file (not in origin/master or HEAD), so `present=false` per the strict gate ? though its content does contain both the P3 and P4 fusion rows. Nothing was deleted.
