1. user (2026-06-16T15:14:30.290Z)

Adversarially VERIFY this finding from the real-footage rally-detection validation. Try hard to REFUTE or show it is overstated, using ONLY the data (you MAY Read output/local_vs_gemini_6.json). Default to holds=false if the numbers do not clearly support it.

CLAIM (windowing-TAL): Over-segmentation under W1 is dominated by the 3 GoPro (GX) venue clips, which over-split ~1.6-2.0x, while mahadevpura clips do not over-split at all -- a per-venue, not per-video-content, signature.

EVIDENCE CITED: W1 count/Gemini: GX010128 78/39=2.00x, GX010129 50/27=1.85x, GX020125 18/11=1.64x (all >1.6x); vs mahadevpura-0 62/40=1.55x, mahadevpura-2 40/39=1.03x, mahadevpura-1 2/9=0.22x. The 3 GX clips share the over-split; the 3 mahadevpura clips span 0.22x-1.55x. Per-video mean window also clusters by venue: GX 7.8/9.3/14.1s vs Gemini means 5.7-7.2s.

REAL-FOOTAGE VALIDATION DATA (6 Kushagra/Yash June-12 clips, 1080p proxies, fully-LOCAL no-AI WASB

windowing vs Gemini. Gemini = strong REFERENCE, NOT ground truth ? these 6 have no golden labels EXCEPT mahadevpura-2 which the owner hand-labeled, see GROUND-TRUTH below).

Rally COUNT (Gemini | local baseline | local W1 cap=12 | local W1+W2 mc=1):

GX010128: 39 | 15 | 78 | 75

GX010129: 27 | 2 | 50 | 47

GX020125: 11 | 6 | 18 | 15

mahadevpura-0: 40 | 19 | 62 | 43

mahadevpura-1: 9 | 1 | 2 | 2

mahadevpura-2: 39 | 5 | 40 | 40

AGGREGATE: Gemini 165 | baseline 48 (mean window 62.9s, 27 merge-groups, mIoU 0.23) |

W1 250 (mean 10.8s, 10 merge-groups, mIoU 0.39) |

W1+W2 222 (mean 11.5s, 10 merge-groups, mIoU 0.39, 6 gemini-only "misses")

Per-video mean window (W1): GX010128 7.8s, GX010129 9.3s, GX020125 14.1s, mahadevpura-0 10.4s,

mahadevpura-1 86.9s (the continuously-active blob W1 cannot cap ? no inactivity

gap),

mahadevpura-2 13.8s. Gemini means ~5.7-7.2s.

GROUND-TRUTH (mahadevpura-2, 40 owner-labeled rallies, mean 5.7s, verified frame-aligned):

F1@0.5 / F1@0.25 / mean-IoU: Gemini 0.557/0.835/0.55 ; local W1+W2 0.150/0.500/0.31 ;

local W1+W2+hard-cap 0.296/0.722/0.50 (best local). baseline 0.000/0.000/0.03.

BOUNDARY ERROR (matched rallies, seconds): Gemini |?start| med 1.46 |?end| med 1.19 ;

local-hardcap |?start| med 1.74 (~= Gemini!) |?end| med 3.12 (>> Gemini).

=> local's rally-START detection is ~at par with Gemini; the gap is the rally-END.

IoU<->time: for a 5.7s rally, tIoU 0.5 tolerates only ~+-1.9s shift (the ~1-1.5s service window

nearly exhausts it -> tIoU 0.5 over-penalizes; owner wants a +-2s tolerance metric).

PRIOR GOLDEN DELTAS (n=6, then n=7 incl. mahadevpura-2): baseline F1 0.300 -> W1 0.439 (+0.139,

6/0)
-> W1+W2 0.457 (+0.019, 6/0); hard-cap golden-neutral on n=6 (+0.006 n.s.) but became BEST on n=7
(continuously-active clips). All flags default-OFF, promoted only on measured LOVO lift + sign-test.

WINDOWING KNOBS: a frame is "active" iff shuttle visible AND per-second-normalized velocity > velocity_thresh(0.02); active frames within merge_gap(2.0s) coalesce; min_window(2.0s). W1 = max_window_duration cap(12s) split at the largest internal inactivity gap. W1.5 hard-cap = midpoint-chop when no gap. W2 = net-crossings gate (drop windows with <1 net crossing).

2. assistant (2026-06-16T15:14:32.720Z)

I'll verify this claim by examining the actual data and the cited numbers.

3. user (2026-06-16T15:14:33.729Z)

File does not exist. Note: your current working directory is C:\Users\avidu\Projects\badminton-highlight-indexer\.claude\worktrees\w2-safeguard.

13. assistant (2026-06-16T15:15:15.821Z)

Now I have the actual data. Let me verify each cited number against the JSON.

****W1 count/Gemini ratios (count_ratio field):****

Clip	W1 n	n_gem	Claimed ratio	Actual count_ratio	Match?
GX010128	78	39	2.00x	2.0	?
GX010129	50	27	1.85x	1.8519	?
GX020125	18	11	1.64x	1.6364	?
mahadevpura-0	62	40	1.55x	1.55	?
mahadevpura-2	40	39	1.03x	1.0256	?
mahadevpura-1	2	9	0.22x	0.2222	?

All six cited ratios are exact. The "all >1.6x" for the 3 GX clips holds (2.00, 1.85, 1.64 ? the lowest, 1.64, is just above 1.6). The 3 mahadevpura clips span 0.22x?1.55x as claimed.

****Per-video mean window (W1) ? mean_dur field:****

Clip	Claimed	Actual mean_dur	Match?
GX010128	7.8s	7.758	?
GX010129	9.3s	9.274	?
GX020125	14.1s	14.113	?

Gemini means: GX010128 5.85, GX010129 7.24, GX020125 6.45, mahadevpura clips 6.55/5.69/6.82. The claim says "Gemini means 5.7?7.2s" ? actual range is 5.69?7.24. ? (the GX W1 means 7.8/9.3/14.1 all exceed the Gemini band, supporting that GX windows are systematically too long).

Now let me scrutinize the ****interpretive claims**** adversarially ? this is where overstatement could hide.

****Claim part 1: "Over-segmentation under W1 is dominated by the 3 GX clips."**** Over-segmentation = producing more windows than reference. Local_only counts (windows with no Gemini match) under W1: GX010128=34, GX010129=18, GX020125=8 ? GX total = 60. mahadevpura-0=22, mahadevpura-1=0, mahadevpura-2=4 ? maha total = 26. By count_ratio, all 3 GX clips over-split ?1.64x; mahadevpura is mixed. So the GX clips genuinely carry the bulk of over-segmentation. Holds.

****Claim part 2: "while mahadevpura clips do not over-split at all."**** This is the weakest link. Let me check it hard:

- mahadevpura-0: count_ratio ****1.55**** (62 vs 40) ? that IS over-splitting. 22 local_only windows, 2 splits.
- mahadevpura-2: 1.03 ? essentially at parity (effectively not over-splitting).
- mahadevpura-1: 0.22 ? under-splits.

So mahadevpura-0 over-splits at 1.55x ? only marginally below GX020125's 1.64x. The blanket

statement "mahadevpura clips do not over-split at all" is **contradicted by mahadevpura-0**, which over-splits 1.55x (62 windows vs 40 reference). The claim's own evidence line even quotes "mahadevpura-0 62/40=1.55x," so the cited ratio is correct, but the verbal summary "do not over-split at all" is inaccurate for that clip.

Claim part 3: "a per-venue, not per-video-content, signature." With n=3 GX and n=3 mahadevpura, and mahadevpura spanning 0.22x?1.55x (a huge within-venue spread), the within-mahadevpura variance is larger than the GX?mahadevpura-0 gap (1.55 vs 1.64). The mahadevpura group does NOT cluster ? it spans nearly the entire range. The mean-window "clustering by venue" is also questionable: mahadevpura-0 W1 mean = 10.4s, mahadevpura-2 = 13.8s ? these overlap with GX020125's 14.1s and exceed GX010128's 7.8s. So mean windows do NOT cleanly separate by venue either. The "per-venue signature" framing is overstated given the data.

Let me confirm the mahadevpura W1 means cited in the prose (10.4 / 86.9 / 13.8) against the JSON: mahadevpura-0 = 10.421 ?, mahadevpura-1 = 86.895 ?, mahadevpura-2 = 13.777 ?.

Assessment. The raw cited numbers are all exact and verifiable. But the claim makes three load-bearing interpretive assertions, and two are overstated:

1. "GX clips dominate over-segmentation" ? supported.
2. "mahadevpura clips do not over-split at all" ? **refuted**: mahadevpura-0 over-splits 1.55x (62/40), nearly at GX020125's level. Only mahadevpura-1/-2 fail to over-split.
3. "per-venue, not per-video-content, signature" ? **overstated**: within-venue spread for mahadevpura (0.22x?1.55x, and W1 means 10.4/86.9/13.8s) is larger than the cross-venue gap, so the data does not support a clean per-venue clustering. If anything it points to per-video-content variation (mahadevpura-1 is the "continuously-active blob" ? explicitly content, not venue).

The core factual ratios hold but the headline conclusion ("a per-venue, not per-video-content, signature" + "mahadevpura clips do not over-split at all") is contradicted by mahadevpura-0 and by the within-venue spread.

Structured output provided successfully

15. assistant (2026-06-16T15:15:29.528Z)

I've completed the adversarial verification. The structured output captures the finding: the cited raw numbers are all exact, but the headline interpretation is overstated and partially refuted by mahadevpura-0 (which over-splits 1.55x, contradicting "mahadevpura clips do not over-split at all") and by the within-venue spread being larger than the cross-venue gap (undermining the "per-venue, not per-video-content" signature).
