Adversarially VERIFY this finding from the real-footage rally-detection validation. Try hard to REFUTE or show it is overstated, using ONLY the data (you MAY Read output/local_vs_gemini_6.json). Default to holds=false if the numbers do not clearly support it.

CLAIM (windowing-TAL): W2 (net-crossings gate) trades count for recall and only meaningfully fires on one venue; it is near-inert on the GX clips and fully inert on the continuously-active blob.

EVIDENCE CITED: W1 -> W1+W2 count change: GX010128 78->75 (-3), GX010129 50->47 (-3, and +1 gemini_only miss appears), GX020125 18->15 (-3), mahadevpura-0 62->43 (-19, gemini_only 0->5), mahadevpura-1 2->2 (0), mahadevpura-2 40->40 (0). Aggregate 250->222 (-28) with 6 new gemini-only misses; mIoU flat at 0.39. Nearly all of W2's effect is mahadevpura-0; it buys count reduction by spending recall (5 misses on that clip).

REAL-FOOTAGE VALIDATION DATA (6 Kushagra/Yash June-12 clips, 1080p proxies, fully-LOCAL no-AI WASB windowing vs Gemini. Gemini = strong REFERENCE, NOT ground truth ? these 6 have no golden labels EXCEPT mahadevpura-2 which the owner hand-labeled, see GROUND-TRUTH below).

Rally COUNT (Gemini | local baseline | local W1 cap=12 | local W1+W2 mc=1):

```
GX010128: 39 | 15 | 78 | 75  
GX010129: 27 | 2 | 50 | 47  
GX020125: 11 | 6 | 18 | 15  
mahadevpura-0: 40 | 19 | 62 | 43  
mahadevpura-1: 9 | 1 | 2 | 2  
mahadevpura-2: 39 | 5 | 40 | 40  
AGGREGATE: Gemini 165 | baseline 48 (mean window 62.9s, 27 merge-groups, mIoU 0.23) |  
            W1 250 (mean 10.8s, 10 merge-groups, mIoU 0.39) |  
            W1+W2 222 (mean 11.5s, 10 merge-groups, mIoU 0.39, 6 gemini-only "misses")  
Per-video mean window (W1): GX010128 7.8s, GX010129 9.3s, GX020125 14.1s, mahadevpura-0 10.4s,  
mahadevpura-1 86.9s (the continuously-active blob W1 cannot cap ? no inactivity  
gap),  
mahadevpura-2 13.8s. Gemini means ~5.7-7.2s.
```

GROUND-TRUTH (mahadevpura-2, 40 owner-labeled rallies, mean 5.7s, verified frame-aligned):

```
F1@0.5 / F1@0.25 / mean-IoU: Gemini 0.557/0.835/0.55 ; local W1+W2 0.150/0.500/0.31 ;  
local W1+W2+hard-cap 0.296/0.722/0.50 (best local). baseline 0.000/0.000/0.03.  
BOUNDARY ERROR (matched rallies, seconds): Gemini |?start| med 1.46 |?end| med 1.19 ;  
local-hardcap |?start| med 1.74 (~= Gemini!) |?end| med 3.12 (>> Gemini).  
=> local's rally-START detection is ~at par with Gemini; the gap is the rally-END.  
IoU<->time: for a 5.7s rally, tIoU 0.5 tolerates only ~+-1.9s shift (the ~1-1.5s service  
window  
nearly exhausts it -> tIoU 0.5 over-penalizes; owner wants a +-2s tolerance metric).
```

PRIOR GOLDEN DELTAS (n=6, then n=7 incl. mahadevpura-2): baseline F1 0.300 -> W1 0.439 (+0.139, 6/0)
-> W1+W2 0.457 (+0.019, 6/0); hard-cap golden-neutral on n=6 (+0.006 n.s.) but became BEST on n=7
(continuously-active clips). All flags default-OFF, promoted only on measured LOVO lift + sign-test.

WINDOWING KNOBS: a frame is "active" iff shuttle visible AND per-second-normalized velocity > velocity_thresh(0.02); active frames within merge_gap(2.0s) coalesce; min_window(2.0s). W1 = max_window_duration cap(12s) split at the largest internal inactivity gap. W1.5 hard-cap = midpoint-chop when no gap. W2 = net-crossings gate (drop windows with <1 net crossing).

2. assistant (2026-06-16T15:14:32.873Z)

I'll verify this claim by examining the actual data file.

3. user (2026-06-16T15:14:33.776Z)

File does not exist. Note: your current working directory is C:\Users\avidu\Projects\badminton-highlight-indexer\.claude\worktrees\w2-safeguard.

4. assistant (2026-06-16T15:14:36.372Z)

The cited path doesn't exist at that location. Let me find the actual data file.

10. assistant (2026-06-16T15:14:57.475Z)

I now have the raw data. Let me verify each cited number against the JSON systematically.

****Counts (W1 ? W1+W2):****

- GX010128: 78?75 (?3) ? matches "78->75 (-3)"
- GX010129: 50?47 (?3) ? matches "50->47 (-3)"; gemini_only 0?1 ? matches "+1 gemini_only miss appears"
- GX020125: 18?15 (?3) ? matches "18->15 (-3)"
- mahadevpura-0: 62?43 (?19) ? matches "62->43 (-19)"; gemini_only 0?5 ? matches "gemini_only 0->5"
- mahadevpura-1: 2?2 (0) ?
- mahadevpura-2: 40?40 (0) ?

****Aggregate:**** W1 = 78+50+18+62+2+40 = 250 ?. W1+W2 = 75+47+15+43+2+40 = 222 ?. Change = ?28 ?.

****New gemini-only misses (W1?W1+W2):**** GX010129 +1 (0?1), mahadevpura-0 +5 (0?5). That totals ****+6****? Let me check all: GX010128 0?0, GX010129 0?1, GX020125 0?0, mahadevpura-0 0?5, mahadevpura-1 0?0, mahadevpura-2 0?0. Sum of new gemini_only = 1+5 = 6. ? matches "6 new gemini-only misses."

****mIoU "flat at 0.39":**** This is the claimed aggregate. Let me check whether W2 actually keeps mIoU flat per the data. The per-video mean_iou values:

- W1 mIoUs: 0.529, 0.482, 0.433, 0.493, 0.0, 0.420
- W1+W2 mIoUs: 0.529, 0.485, 0.433, 0.484, 0.0, 0.420

Let me compute the per-video-mean aggregates precisely.

11. user (2026-06-16T15:15:04.871Z)

```

W1 mean mIoU : 0.393
W1+W2 mean mIoU: 0.392
W1 mean (excl 0): 0.4715
W1+W2 mean (excl 0): 0.4704

```

12. assistant (2026-06-16T15:15:21.801Z)

Aggregate mIoU is 0.393 (W1) ? 0.392 (W1+W2), both round to ~0.39, so "flat at 0.39" holds. The slight movement is within rounding.

Now let me adversarially probe the strongest sub-claims:

****Claim: "near-inert on GX clips."**** On GX clips, W2 drops 3+3+3 = 9 windows total and never gains a matched rally (matched: GX010128 35?35, GX020125 9?9; GX010129 22 vs 23 ? actually *drops* a match). On GX010129, matched 23?22 and gemini_only 0?1, so W2 *removed a matched window* there. So "near-inert" is fair for GX010128/GX020125 (only local_only pruning, matched unchanged), and on GX010129 it costs a true positive. The phrase "near-inert" (small count changes of ?3) is defensible.

****Claim: "fully inert on the continuously-active blob" (mahadevpura-1).**** mahadevpura-1: W1 n=2, W1+W2 n=2, identical play/mean/matched/everything. Fully inert ?.

****Claim:** "Nearly all of W2's effect is mahadevpura-0."** Effect on count: 19 of 28 total = 68% of count reduction. The 5 new misses (of 6 total) are on mahadevpura-0. So "nearly all" by both metrics. The GX clips contribute 9/28 = 32% of count reduction, which is non-trivial but smaller. "Nearly all" is a slight overstatement on the count axis (32% is not negligible), but the *recall-cost* axis (5 of 6 misses) is overwhelmingly mahadevpura-0.

****Claim:** "trades count for recall."** Phrasing ? it trades count reduction by spending recall. On mahadevpura-0: matched 34/30 (4 true positives lost), gemini_only 0/5. So yes, real recall cost. ?

****Claim:** "buys count reduction by spending recall (5 misses on that clip)."** mahadevpura-0 gemini_only 0/5 ?. matched dropped 34/30 ?.

Let me double check the "only meaningfully fires on one venue" framing ? GX = one venue (GoPro Kushagra/Yash), mahadevpura = another venue. W2 meaningfully fires on mahadevpura-0 (a mahadevpura-venue clip). It does fire mildly on GX (3 each) and on GX010129 even costs a match. So "only meaningfully fires on one venue" ? the meaningful firing (19, 5 misses) is mahadevpura-0; the GX firings are minor (3). Defensible.

All cited numbers reconcile exactly with the JSON. The one mild caveat: "Nearly all of W2's effect is mahadevpura-0" is precisely true for the recall cost (5/6 misses) but for raw count it's 19/28 ? 68% with GX contributing 9/28 ? 32% ? not literally "nearly all." But the claim immediately qualifies it as "it buys count reduction by spending recall," and on the recall axis the concentration is near-total. The overall thrust holds.

13. user (2026-06-16T15:15:30.522Z)

Structured output provided successfully

14. assistant (2026-06-16T15:15:33.938Z)

Verified. All cited numbers in the claim reconcile exactly with the raw data in `output/local\_vs\_gemini\_6.json`, and the directional characterizations hold. The finding stands as written, with one minor precision caveat I noted in the correction field (the "nearly all" framing is exact on the recall axis but ~68% on the raw-count axis).
