You are auditing a badminton rally-detection codebase for DOC/COMMENT STALENESS ? statements that CONTRADICT the current code or data.

HARD RULES:

- Report ONLY factual staleness with CODE EVIDENCE (file:line or symbol) that proves it. Open the cited code and confirm before reporting.
- NEVER invent a fact or a status. If a thing is built-but-default-OFF / unwired / unmeasured, say EXACTLY that ? do not overclaim "in production".
- A "[design]" tag is stale ONLY if the thing is actually BUILT in code (cite the symbol).
- DO NOT propose subjective rewrites, style/tone changes, or improvements. DO NOT relitigate owner-gated DECISIONS (owned-model roadmap, licensing/MIT-Apache stance, product/strategy choices, genuinely-still-design proposals).
- Preserve the document's voice and formatting; make the SMALLEST surgical edit. stale_text MUST be copied verbatim with enough context to be unique.
- IGNORE docs/archives/** (terminal snapshots) and any memory/ file.

Working dir is the repo root; use Read/Grep/Glob freely.

ADVERSARIALLY VERIFY these proposed staleness fixes for ONE file: docs/GOLDEN_VIDEOS.md.
For EACH proposed fix: (1) open docs/GOLDEN_VIDEOS.md and confirm stale_text appears VERBATIM (tighten/expand it to an exact, UNIQUE match if needed ? this text will be applied by exact string match, so it must be perfect); (2) re-open the cited code yourself and confirm the claim is genuinely contradicted by the CURRENT code; (3) confirm corrected_text is accurate, preserves voice, and is minimal; (4) DROP it if it is subjective, an owner-gated decision, already-correct, or you cannot verify the evidence. Output ONLY the survivors (verdict confirm or revise), with stale_text guaranteed to be an exact unique substring of the file.

PROPOSED FIXES:

1      # Golden-labeled video registry
2
3      **Purpose.** The single source of truth for every **golden** (human rally-boundary-
labeled) video ? what
4      it is, where the source proxy lives, how many rallies, and whether it's ingested into
the eval corpus.
5      Use this to **isolate the golden videos into a dedicated location** and to keep the
growing golden set
6      auditable. Updated whenever a new video is labeled + ingested.
7
8      > **This is the GROWING GOLDEN-finalized set** in the dual-eval-set discipline (see
9      > [QUALITY_ITERATIONS.md](QUALITY_ITERATIONS.md), the 2026-06-16 capstone + `eval-dual-
set-regression`):
10     > a **RAW eval set** (currently-bad videos) + this **golden-finalized eval set**
(promoted when at-par) +
11     > a separate **golden TRAINING set**. Every quality launch must not regress on either
eval set.
12     > Privacy-safe, video-free *shipping* of these =
[GOLDEN_REGRESSION_FIXTURES.md](GOLDEN_REGRESSION_FIXTURES.md).
13
14     ## Contracts / conventions
15     - **Labels:** rally-annotator CSV
(`rally_number,start_time,end_time,ending_reason,sport,shots_count`,
16     decimal seconds) ? ingested by `backend/eval/gt_loader.py` (reads
`start_time`/`end_time`).
17     - **Alignment is mandatory before trusting any score.** The label timebase MUST match
the windowed proxy
18     (same fps + frame count). Verify with `ffprobe` (the `largetest_doubles` near-miss is
why) ? ideally
19     annotate the *exact* proxy the detector ran on (then `video_id` = MD5 matches and
alignment is free).
20     - **`video_id`** = MD5 of the proxy (`backend/utils/hashing.py::compute_video_id`); it
keys the WASB
21     trajectory cache, the Gemini reference rows, and the golden features.
22     - **Ingestion** = copy the trajectory + labels to durable paths, write
`output/<name>_golden_features.json`
23     (`gts` + candidates), append a row to `output/human_lovo_manifest.json`.
(`scratch/at_par.py` scores a
24     single video vs Gemini + golden; `backend/eval/rally_seg_eval.py` runs the whole
corpus.)
25     - **Guardrails:** owned footage only; **minors excluded**; labels never derived from a

```

```

paid LLM (Gemini is
26     inference/reference only). Commercial-clean.

49     ## Source folder & not-yet-labeled
50     - **Annotation root:** `G:\My Drive\Sharing\Annotation Videos\Golden Label Videos
Request - June 15\`
51     (+ the earlier `Roora Request - June 15\`). `[Done]` prefix in a dir name = golden-
labeled.
52     - **Labeled badminton dirs:** Video 3 (=mahadevpura-2), 6 (=GX030094), 10 (=BXH 2), 13
(=GX010128, a
53     re-label of #8), 14 (=mahadevpura-1). **Video 13 is a duplicate of #8** (already
ingested).
54     - **Not yet labeled / other sports:** Video 1, 4, 7, 9, 12 (badminton, pending); Video
2, 8 (table tennis);
55     Video 5, 11 (pickleball). Badminton is the current focus (alpha customers);
TT/pickleball labeled later.
56
57     ## How to isolate the golden videos
58     Each row's **source proxy** column is the file to copy into a dedicated golden-videos
location. The labels
59     live beside the proxy (`<name>.rallies.csv`) and a durable copy is in
`output/<name>.rallies.csv`; the
60     trajectory is in `Collect/Trajectories/` (path in the manifest). Keep this table in sync
on every new ingest.

The manifest contains exactly 15 entries. Let me confirm the count and the specific entries cited.

The 15 entries are:

1. adarsh_avi_singles
2. kushagra_singles
3. largetest_doubles
4. gbaaddy
5. testlarge_short
6. mahadevpura_singles
7. mahadevpura_2
8. GX010128
9. mahadevpura_1
10. GX030094 (fps 29.97)
11. Badminton_BXH_2 (fps 59.94)
12. GX010141
13. GX010137
14. Boxhill_Doubles
15. GX020094

Both proposed fixes are verified against the data.

Fix 1: The header `## Ingested golden corpus ? \output/human\_lovo\_manifest.json\` (n = 9)` appears verbatim on line 28. The manifest has 15 entries, so n=9 is stale. The doc self-describes as "the single source of truth." Confirmed.

Fix 2: The "ingestion in progress" section (lines 42-47) lists GX030094 (fps 29.97) and Badminton BXH 2 (fps 59.94) as "WASB running ? ingest next", but both are present in the manifest (entries 10 and 11) with matching fps. Confirmed stale. Let me verify the stale_text matches verbatim ? the proposed stale_text includes the full section. Comparing the proposed `stale\_text` against the file lines 42-47, it matches exactly.

Both fixes are genuinely stale, well-evidenced, minimal, preserve voice, and are not owner-gated decisions. Both `stale\_text` values are exact unique substrings of the file.

Structured output provided successfully

9. assistant (2026-06-19T15:52:42.718Z)

Both proposed fixes are verified and survive as **confirm**.

Verification summary:

Fix 1 (n=9 ? n=15): The header `## Ingested golden corpus ? \output/human\_lovo\_manifest.json\` (n = 9)` appears verbatim at line 28 and is unique. I re-read `output/human_lovo_manifest.json` (the cited evidence file) and counted exactly 15 JSON objects. The count is genuinely stale. The doc self-describes as "the single source of truth," making the count load-bearing.

Fix 2 (GX030094 / Badminton BXH 2 status): The multi-line `stale\_text` (lines 42-47) matches verbatim ? including the `?` ellipses, the bold `\*\*29.97\*\*`, and the `WASB running ? ingest next` status cells ? and is unique. The manifest contains both clips: entry 10 is `GX030094` (fps 29.97) and entry 11 is `Badminton\_BXH\_2` (fps 59.94), matching the fps shown. Per the doc's own definition (lines 22-24), presence in `human\_lovo\_manifest.json` is the marker of completed

ingestion, so the "ingestion in progress" status is contradicted by current data.

Both `stale\_text` values are exact, unique substrings of the file; both `corrected\_text` edits are minimal and preserve the document's voice and table formatting. Relevant files:
