1. user (2026-06-22T01:31:01.176Z)

You are a professional Hindi (?????, Devanagari U+0900?U+097F) localizer for KhelSutra, a badminton-highlights product. Localize the "Annotate your footage / train your own model" page for a NON-technical coach or parent ? warm, plain, honest. This page is candid about what is and isn't shipping; keep every honest caveat intact (e.g. "open / in build", "optional", "no accuracy claim", "no Train-now button yet", privacy/consent/minors lines).

SOURCE ? English values keyed by dotted key (translate the human-readable text of EVERY one of the 52 keys):

```
{  
  "heroTitle": "Annotate your footage. <span class=\\"hl\\">Train a model that's yours.</span>",  
  "heroLead": "You can't train Gemini or GPT on your court footage. KhelSutra's direction is the inverse ? a small, <b style=\\"color:#EAF3EE\\">owned</b> rally model where the moat is your consented dataset, on a commercially-clean, inspectable stack you control.",  
  "nav.home": "? KhelSutra home",  
  "nav.annotate": "Annotate",  
  "nav.train": "Train your own model",  
  "nav.setup": "Setup & use",  
  "sample": "? <b>Want to see what KhelSutra produces?</b> A real sample reel plays the moment you <a href=\\"/#join\\">request access</a>.",  
  "annotate.kicker": "Step 1 · real and shipping today",  
  "annotate.title": "Annotate your footage",  
  "annotate.pill": "live today",  
  "annotate.body": "<b>rally-annotator</b> is a free, open-source (MIT) <b>VLC plugin</b> that turns \\"watch a match\\" into golden labels. While you watch your own video in VLC, you mark each rally's start and end plus how the point ended; it writes one row per rally to a plain CSV next to your video. <b>Your footage never leaves your machine.</b> It covers five net-separated racquet sports (badminton, tennis, table tennis, pickleball, padel).",  
  "annotate.cap1": "Enable it once: VLC ? View ? Rally Annotator.",  
  "annotate.cap2": "Mark each rally's start/end + ending reason, then Save Rally.",  
  "annotate.flowLead": "The flow, per rally:",  
  "annotate.step1": "<b>Mark START</b> on the serve-contact frame (pause/scrub for accuracy).",  
  "annotate.step2": "<b>Mark END</b> when the shuttle is dead.",  
  "annotate.step3": "Pick an <b>ending reason</b>, optionally a shot count, then <b>Save Rally</b> ? one CSV row.",  
  "annotate.step4": "Fix anything with <b>Edit / Delete / Undo</b>; re-open the same video later to continue.",  
  "annotate.note": "It's a click-driven dialog (no marking hotkeys yet), and targets <b>VLC 3.0.x</b>.",  
  "train.kicker": "Step 2 · the moat",  
  "train.title": "Train your own model",  
  "train.pill": "open pipeline · in build",  
  "train.reassureTitle": "You don't have to train anything to start.",
```

```

"train.reassureBody": "KhelSutra runs on a ready-made default, so you get rally detection and
reels <b>out of the box</b> ? nothing to set up. Training on your own footage (below) is an
<b>optional</b> power-up: a model tuned to your courts, your angles, your halls.",
"train.intro": "For those who want it, your labels feed an <b>owned</b> rally model ? trained
on <b>your</b> courts, <b>your</b> angles, <b>your</b> busy multi-court halls. The pipeline is
open and inspectable:",
"train.moat.ownTitle": "You own it",
"train.moat.ownBody": "A model and dataset that are yours to keep and improve ? not rented
inference.",
"train.moat.cleanTitle": "Commercially clean",
"train.moat.cleanBody": "MIT/Apache/BSD-only stack; we never train on a paid LLM's output.",
"train.moat.privateTitle": "Private & consented",
"train.moat.privateBody": "Footage stays yours; training use is explicit opt-in, never
automatic.",
"train.moat.minorsTitle": "Minors protected",
"train.moat.minorsBody": "Footage involving minors is never used for training and never
published.",
"train.honestTitle": "Read this honestly.",
"train.honestBody": "The labeling tool is real and shipping. The training pipeline is <b>open
and in active build</b> ? today it's a developer CLI; the no-GPU path trains a pipeline-
validation <b>mock</b>, and a real model needs a GPU. There is <b>no \"Train now\" button</b>
yet, and we make <b>no accuracy claim vs a paid LLM</b> (there's no such benchmark). The promise
here is <b>ownership, licensing, privacy and consent</b> ? not \"more accurate than Gemini,\"
and not \"one click to train.\",
"setup.kicker": "Step 3 · for power users",
"setup.title": "Setup & use",
"setup.install": "<b>Install the plugin (VLC 3.0.x).</b> Copy <code>rally_annotator.lua</code>
into VLC's per-user Lua <code>extensions</code> folder (create it if missing), then VLC ? Tools
? Plugins and extensions ? <i>Reload extensions</i>, and enable it from <i>View ? Rally
Annotator</i>:",
"setup.record": "<b>Record</b> per the <a href=\"\"/capture\">one-page capture checklist</a>
(fixed tripod, full court, landscape, whole session) ? <b>annotate</b> in VLC ? you get
<code>&lt;video&gt;.rallies.csv</code>:",
"setup.reasons": "<code>ending_reason</code> is one of: <code>unknown</code> ·
<code>winner</code> · <code>forced_error</code> · <code>unforced_error</code> ·
<code>service_fault</code> · <code>let</code> · <code>other</code>. Times are decimal seconds;
downstream tools read by column name.",
"setup.train": "<b>Train</b> (developer CLI). A GPU-free dry run validates the whole pipeline
on a CPU mock; a real model needs a GPU:",
"setup.joinRule": "One join rule: keep the video <b>byte-identical</b> to what you annotated
(don't re-encode after labeling) ? labels match videos by content hash.",
"not.kicker": "So expectations stay honest",
"not.title": "What this is not",
"not.i1": "Not a one-click trainer ? training is an offline CLI today.",
"not.i2": "Not in-browser ? labeling runs in VLC on your machine.",
"not.i3": "Not an accuracy claim vs Gemini/GPT ? no such benchmark.",
"not.i4": "Shot-type, player and score detection are roadmap.",
"cta.title": "Want in?",
"cta.button": "Request alpha access",
"foot.flyer": "Academy flyer:",
"foot.mark": "Reels carry a \"Generated by Khelsutra.guru\" mark."
}

```

REFERENCE ? already-approved Hindi (?????, Devanagari U+0900?U+097F) strings from the SAME site. Reuse this exact terminology and register (e.g. how "rally", "court", "footage", "baseline", "Request access" were rendered) so the page reads consistently:

```

{
  "ownModel_requestAccess": "????? ? ???? ???? ?",
  "nav": {
    "how": "? ? ? ? ? ? ? ? ? ? ?",
    "why": "? ? ? ? ? ? ? ? ? ? ?",
    "ownModel": "???? ? ? ? ? ? ? ? ? ?",
    "flyer": "????????",
    "roadmap": "????????",
  }
}

```

I have completed the localization of all 52 keys into Hindi (Devanagari) and returned them via the StructuredOutput tool.

Key decisions for consistency with the approved reference strings:

- "Request access" rendered as "?????? ?? ?????? ????" (matching the reference)
- "footage" ? "???????", "court" ? "??????", "rally" ? "?????", "baseline" ? "?????????" (matching reference terminology)
- Minors/consent line kept consistent with the approved `capture\_consent` phrasing

All honest caveats were preserved intact: "open / in build" (??? · ?? ??? ??), "optional" (?????????), no accuracy claim, no "Train now" button, and the privacy/consent/minors lines. All brand names, tools, licenses, acronyms, ``` contents, numbers/units, VLC UI labels (kept in English), symbols, and inline HTML tags were preserved exactly as specified.`
