Localize these page <title> strings to Hindi (?????) for KhelSutra (badminton highlights). Concise, natural.

```
SOURCE: {
  "site.meta.index.title": "KhelSutra ? every rally indexed, the dead time gone",
  "site.meta.capture.title": "KhelSutra ? 1-page capture checklist",
  "site.meta.ownModel.title": "KhelSutra ? Annotate your footage & train your own model",
  "site.meta.privacy.title": "Privacy Policy ? KhelSutra"
}
REFERENCE (Hindi (?????), reuse the wording): {
  "app_title": "???? ?? ?? ??? ?????? ?????",
  "site_hero_title": "?? ????, ??? ??. <span class=\"hl\">???? ??, ?????.</span>",
  "site_nav_ownModel": "???? ??? ?????",
  "site_privacy_title": "???????? ??",
  "site_capture_title": "1-?? ?????? ??????"
}
These are HTML <title> tags (the browser-tab text) ? concise, natural, no HTML. KEEP "KhelSutra" verbatim and keep the em-dash "?" and "&". REUSE the locale's already-shipped phrasings from the REFERENCE (e.g. the hero line, the privacy-page title "site_privacy_title", and the capture-page title "site_capture_title") so the tab title matches the page.
Return {"translations":{"<key>":"<value>"}} for all 4 keys.
```

2. assistant (2026-06-22T17:34:37.476Z)

I'll localize these page title strings to Hindi, reusing the already-shipped phrasings from the reference.

3. user (2026-06-22T17:34:39.958Z)

Structured output provided successfully

4. assistant (2026-06-22T17:34:46.992Z)

I've localized all 4 page title strings to Hindi and returned them via StructuredOutput. Here's a summary of the translations:

```
- **site.meta.index.title**: `KhelSutra ? ? ???? , ??? ??. ????? ??, ?????.` ? reuses the shipped hero line phrasing (`? ???? , ??? ?? / ????? ??, ?????`) with the HTML stripped.
- **site.meta.capture.title**: `KhelSutra ? 1-?? ?????? ?????` ? reuses `site_capture_title` verbatim.
- **site.meta.ownModel.title**: `KhelSutra ? ??? ?????? ????? ? ? ? ? ? ? ?` ? reuses the `???? ? ? ?` nav phrasing.
- **site.meta.privacy.title**: `???????? ? ? ? KhelSutra` ? reuses `site_privacy_title` verbatim.
```

All keep "KheḷSutra" verbatim, preserve the em-dash "?", and contain no HTML markup.
