  "site.join.teaser": "<span aria-hidden=\"true\">???? ??? ??? ? ??? ????? ??? ?????? ?????? ????????????????????? ????? ??? ????? 30-???????????? ????? ????? ?????? ?????.",
  "site.join.segLabel": "?????",

```

This is a NON-technical Request-Access form (the visible labels, options, submit button, and the post-submit messages). Warm, plain, reassuring; match the product's existing app/site register (see REFERENCE).

KEEP THESE EXACTLY ? never translate or transliterate:

- Brand/URLs: KhelSutra, khelsutra.guru.
- Storage PRODUCT names, verbatim: "Google Drive", "OneDrive / Microsoft 365", "Dropbox" (these three keys return unchanged).
- Symbols/emoji kept: ? ? . ? ?
- "Privacy Policy" is a LINK label ? translate its words naturally for the locale (it is NOT a brand).
- "Sending?" is the button's in-flight state ? DO translate it (keep the trailing ? ellipsis).

Some values contain inline HTML ? preserve every tag EXACTLY (same tag, same attributes, same order),

translating ONLY the human-readable text between tags:

- site.join.teaser: ? ? (keep the span + ?)
- site.join.note: ? Privacy Policy. (keep the exactly; translate the link text)
- site.join.done: ??
? (keep
 and the styled exactly)

All OTHER keys are PLAIN text ? do not add any HTML to them.

Return {"translations": { ... ALL 26 keys ... }}.

2. assistant (2026-06-22T16:21:26.656Z)

I'll review the findings and apply the flagged fixes while keeping clean keys unchanged. Let me check the reference register first.

3. user (2026-06-22T16:21:29.186Z)

```
locales\kn\common.json:      "how": "??? ???? ???? ??????????",
locales\kn\common.json:      "ctaHow": "??? ???? ???? ?????????? ????",
locales\kn\common.json:      "body": "????? ?????, ???? <b>??? ?????</b> ????? ????????? ????
????????? ?????????? ??? ? KhelSutra ????????????? ????? ?????????? ???? ??????????."
locales\kn\common.json:[Omitted long matching line]
locales\kn\common.json:      "body": "?????-????? ????? ?????-????? ????????? ? ??? ???
????????? ????? ???? ?????????????."
locales\kn\common.json:      "q": "??? ?????? ????? ?????????????????? ????? ??????????????",
locales\kn\common.json:[Omitted long matching line]
locales\kn\common.json:      "missing": "????? AI ?? ??? ? ??????????. KhelSutra ?????????????
????? ?????????????????? ???? ??????????.",
```

No files found

5. assistant (2026-06-22T16:21:44.032Z)

The reference confirms the register: ??? ???? / ??? ????????????? is the established idiom for "the tool working/in action." Now I'll apply the three findings and leave all clean keys unchanged.

- **segIndividual** (medium): drop ???, use the warm self-ID form mirroring "Individual player" ? ????????? ???? ?
- **teaser** (medium): replace the "in action" calque with ??? ?????????????????; preserve the span + ?
- **done** (medium, same calque): apply the same fix inside the styled span; preserve `<br>` and the styled `<span>`
- **intro** (low): swap ????????????????? and ????????????????????? ???? ????????? to kill the build/shape echo

All other keys (including the three storage product names returned verbatim) stay as drafted.

6. user (2026-06-22T16:22:18.557Z)

Structured output provided successfully

7. assistant (2026-06-22T16:22:35.625Z)

Applied the three flagged fixes and left all clean keys unchanged.

- **site.join.segIndividual** (medium): dropped the numeral classifier 和 and switched to the warm self-ID form 本人, mirroring "Individual player" and matching the academy option's classifier-free pattern; also avoids the gendered-default reading.
- **site.join.teaser** (medium): replaced the "in action" calque 正在行动中 with the register-consistent 正在 (confirmed against locales/kn/common.json, which uses 正在 throughout). Preserved `<span aria-hidden="true"></span>` exactly.
- **site.join.done** (same calque): applied the identical fix inside the styled span. Preserved `<br>`, the styled `<span style="font-weight:400;color:var(--mut)">`, and the 🏆 emoji.
- **site.join.intro** (low): broke the build/shape echo by swapping 正在 and 正在.

The three storage product names (Google Drive, OneDrive / Microsoft 365, Dropbox) returned verbatim, the Privacy Policy link text was translated naturally (隐私政策) with `<a href="/privacy">` intact, and "Sending?" kept its trailing ellipsis. All 26 keys returned.
