## Transcript

### 1. user (2026-06-22T01:34:00.001Z)

You are an adversarial Kannada (?????, script U+0C80?U+0CFF) translation reviewer. Be strict ? your job is to FIND problems, not to praise. Review ONE lens only.

LENS ? INTEGRITY: are the inline HTML tags identical to the source (same tags/attributes/order)? Is the text inside <code> byte-identical? Are keep-literal tokens (KhelSutra, VLC, rally-annotator, Gemini, GPT, LLM, GPU, MIT/Apache/BSD, file names, ending\_reason values, 1080p, 30 fps), the VLC UI labels (Mark START/Mark END/Save Rally/?), and the symbols ? · ? ? ? ° all preserved? Is there any stray untranslated English left in prose, or any raw key?

ENGLISH SOURCE (dotted key ? value):

```
{  
  "heroTitle": "Annotate your footage. <span class=\"hl\">Train a model that's yours.</span>",  
  "heroLead": "You can't train Gemini or GPT on your court footage. KhelSutra's direction is the inverse ? a small, <b style=\"color:#EAF3EE\">owned</b> rally model where the moat is your consented dataset, on a commercially-clean, inspectable stack you control.",  
  "nav.home": "? KhelSutra home",  
  "nav.annotate": "Annotate",  
  "nav.train": "Train your own model",  
  "nav.setup": "Setup & use",  
  "sample": "? <b>Want to see what KhelSutra produces?</b> A real sample reel plays the moment you <a href=\"/#join\">request access</a>.",  
  "annotate.kicker": "Step 1 · real and shipping today",  
  "annotate.title": "Annotate your footage",  
  "annotate.pill": "live today",  
  "annotate.body": "<b>rally-annotator</b> is a free, open-source (MIT) <b>VLC plugin</b> that turns \"watch a match\" into golden labels. While you watch your own video in VLC, you mark each rally's start and end plus how the point ended; it writes one row per rally to a plain CSV next to your video. <b>Your footage never leaves your machine.</b> It covers five net-separated racquet sports (badminton, tennis, table tennis, pickleball, padel).",  
  "annotate.cap1": "Enable it once: VLC ? View ? Rally Annotator.",  
  "annotate.cap2": "Mark each rally's start/end + ending reason, then Save Rally.",  
  "annotate.flowLead": "The flow, per rally:",  
  "annotate.step1": "<b>Mark START</b> on the serve-contact frame (pause/scrub for accuracy).",  
  "annotate.step2": "<b>Mark END</b> when the shuttle is dead.",  
  "annotate.step3": "Pick an <b>ending reason</b>, optionally a shot count, then <b>Save Rally</b> ? one CSV row.",  
  "annotate.step4": "Fix anything with <b>Edit / Delete / Undo</b>; re-open the same video later to continue.",  
  "annotate.note": "It's a click-driven dialog (no marking hotkeys yet), and targets <b>VLC 3.0.x</b>.",  
  "train.kicker": "Step 2 · the moat",  
  "train.title": "Train your own model",
```

```

"train.pill": "open pipeline · in build",
"train.reassureTitle": "You don't have to train anything to start.",
"train.reassureBody": "KhelSutra runs on a ready-made default, so you get rally detection and
reels <b>out of the box</b> ? nothing to set up. Training on your own footage (below) is an
<b>optional</b> power-up: a model tuned to your courts, your angles, your halls.",
"train.intro": "For those who want it, your labels feed an <b>owned</b> rally model ? trained
on <b>your</b> courts, <b>your</b> angles, <b>your</b> busy multi-court halls. The pipeline is
open and inspectable:",
"train.moat.ownTitle": "You own it",
"train.moat.ownBody": "A model and dataset that are yours to keep and improve ? not rented
inference.",
"train.moat.cleanTitle": "Commercially clean",
"train.moat.cleanBody": "MIT/Apache/BSD-only stack; we never train on a paid LLM's output.",
"train.moat.privateTitle": "Private & consented",
"train.moat.privateBody": "Footage stays yours; training use is explicit opt-in, never
automatic.",
"train.moat.minorsTitle": "Minors protected",
"train.moat.minorsBody": "Footage involving minors is never used for training and never
published.",
"train.honestTitle": "Read this honestly.",
"train.honestBody": "The labeling tool is real and shipping. The training pipeline is <b>open
and in active build</b> ? today it's a developer CLI; the no-GPU path trains a pipeline-
validation <b>mock</b>, and a real model needs a GPU. There is <b>no \"Train now\" button</b>
yet, and we make <b>no accuracy claim vs a paid LLM</b> (there's no such benchmark). The promise
here is <b>ownership, licensing, privacy and consent</b> ? not \"more accurate than Gemini,\"
and not \"one click to train.\",
"setup.kicker": "Step 3 · for power users",
"setup.title": "Setup & use",
"setup.install": "<b>Install the plugin (VLC 3.0.x).</b> Copy <code>rally_annotator.lua</code>
into VLC's per-user Lua <code>extensions</code> folder (create it if missing), then VLC ? Tools
? Plugins and extensions ? <i>Reload extensions</i>, and enable it from <i>View ? Rally
Annotator</i>:",
"setup.record": "<b>Record</b> per the <a href=\"\"/capture\">one-page capture checklist</a>
(fixed tripod, full court, landscape, whole session) ? <b>annotate</b> in VLC ? you get
<code>&lt;video&gt;.rallies.csv</code>:",
"setup.reasons": "<code>ending_reason</code> is one of: <code>unknown</code> ·
<code>winner</code> · <code>forced_error</code> · <code>unforced_error</code> ·
<code>service_fault</code> · <code>let</code> · <code>other</code>. Times are decimal seconds;
downstream tools read by column name.",
"setup.train": "<b>Train</b> (developer CLI). A GPU-free dry run validates the whole pipeline
on a CPU mock; a real model needs a GPU:",
"setup.joinRule": "One join rule: keep the video <b>byte-identical</b> to what you annotated
(don't re-encode after labeling) ? labels match videos by content hash.",
"not.kicker": "So expectations stay honest",
"not.title": "What this is not",
"not.i1": "Not a one-click trainer ? training is an offline CLI today.",
"not.i2": "Not in-browser ? labeling runs in VLC on your machine.",
"not.i3": "Not an accuracy claim vs Gemini/GPT ? no such benchmark.",

```

KEEP-LITERAL & HTML rules the translation must obey:

KEEP THESE EXACTLY ? never translate or transliterate them:

- Brand/URLs: KhelSutra, khelsutra.guru, and the watermark text "Generated by Khelsutra.guru".
  - Tools/proper nouns: VLC, "VLC 3.0.x", "Rally Annotator", rally-annotator, rally\_annotator.lua, WASB.
  - Models/licences/acronyms: Gemini, GPT, LLM, GPU, CPU, MIT, Apache, BSD, CLI, CSV.
  - Everything inside <code>...</code> stays byte-identical (commands, paths, the ending\_reason enum values
    - unknown / winner / forced\_error / unforced\_error / service\_fault / let / other,
 <video>.rallies.csv, "extensions", the python command lines).
  - Numbers & units literal: 1080p, 30 fps, 60 fps, ~30°, 0.1.0.
  - VLC UI button/menu labels that appear in the page's screenshots STAY IN ENGLISH so the text matches what the user sees on screen: "Mark START", "Mark END", "Save Rally", "Edit / Delete / Undo", "Reload extensions", "View ? Rally Annotator", "Tools ? Plugins and extensions". Translate the sentence AROUND them.
  - Symbols/punctuation kept as-is: ? . ? ? ? °.
- Preserve every inline HTML tag EXACTLY as in the source ? same tags, same attributes, same order:
- <b>, <i>, <a href="...">, <code>, <span class="hl">, and <b style="color:#EAF3EE">. Only the human-readable text BETWEEN tags is translated. Keep the &lt; / &gt; entities and the literal text inside <code> unchanged.
- A link like <a href="/#join">request access</a> keeps the same href; only "request access" is translated.

Return {"issues": [{key, severity (high|medium|low), problem, suggestion}]} . Only real defects under THIS lens.

Empty array if the translation is clean on this lens.

## 2. assistant (2026-06-22T01:34:10.260Z)

I'll review the Kannada translation against the source for the INTEGRITY lens, checking HTML tags, code blocks, keep-literal tokens, UI labels, symbols, and stray English/raw keys.

Let me work through each key systematically.

Key findings from my analysis:

**\*\*heroLead\*\*** ? Source has `KhelSutra's direction` but translation uses `KhelSutra ? ??????`. This is fine (brand preserved). The `

**\*\*setup.install\*\*** ? Source: `VLC ? Tools ? Plugins and extensions ? <i>Reload extensions</i>`.

The source has the label "Tools ? Plugins and extensions" as one UI path, then `*<i>Reload extensions</i>*`. Translation: `VLC ? Tools ? Plugins and extensions ????? *<i>Reload extensions</i>*` ? the second `?` before "Reload extensions" was replaced with the Kannada word `????` (and). This drops a `?` symbol that must be preserved.

Let me verify the symbol counts carefully.

### 3. user (2026-06-22T01:34:11.598Z)

SOURCE setup.install:  
VLC ? Tools ? Plugins and extensions ? Reload extensions  
arrows in source: 3

### 4. assistant (2026-06-22T01:34:15.158Z)

Now let me verify the symbol/arrow counts and check for stray English across all keys carefully.

### 5. user (2026-06-22T01:34:22.383Z)

=== Cross-check setup.install arrows ===  
TRANSLATION setup.install:  
"...VLC ? ?????-??????? Lua extensions ?????????? ?????? (????????????? ?????? ??????), ??? VLC ?  
Tools ? Plugins and extensions ????? Reload extensions, ????? View ? Rally Annotator ?????..."

Source UI path segment: "VLC ? Tools ? Plugins and extensions ? Reload extensions"  
-> 3 arrows total in that run (VLC?Tools, Tools?Plugins, Plugins?Reload)  
Translation: "VLC ? Tools ? Plugins and extensions ????? Reload extensions"  
-> 2 arrows; the 3rd arrow (? before Reload extensions) replaced by Kannada "?????"

### 6. assistant (2026-06-22T01:34:25.038Z)

Now let me carefully audit each remaining concern. Let me check `setup.install` ? the source has `*<i>Reload extensions</i>*` but the translation has plain `Reload extensions` without the `*<i>*` tags.

### 7. user (2026-06-22T01:34:32.019Z)

=== setup.install *<i>* tag audit ===  
SOURCE:  
...Plugins and extensions ? *<i>Reload extensions</i>*, and enable it from *<i>View ? Rally Annotator</i>*:  
-> TWO *<i>*...*</i>* tag pairs.  
  
TRANSLATION:  
...Plugins and extensions ????? *<i>Reload extensions</i>*, ????? *<i>View ? Rally Annotator</i>* ?????...  
-> TWO *<i>*...*</i>* tag pairs present. OK on *<i>* tags.

So *<i>* tags ARE present. The defect is only the missing ? arrow (replaced by ?????).

=== Also note: setup.install source "VLC ? Tools ? Plugins and extensions" ===  
Wait, re-read SOURCE exactly:  
"...then VLC ? Tools ? Plugins and extensions ? *<i>Reload extensions</i>*, and enable it from *<i>View ? Rally Annotator</i>*:"  
arrows OUTSIDE *<i>*: VLC?Tools, Tools?Plugins, Plugins?[*<i>Reload*] = 3 arrows before/around the first *<i>*  
arrows INSIDE 2nd *<i>*: View ? Rally Annotator = 1 arrow  
Total arrows in source string = 4

TRANSLATION arrows:  
"VLC ? Tools ? Plugins and extensions ????? *<i>Reload extensions</i>*, ????? *<i>View ? Rally Annotator</i>*"  
= VLC?Tools, Tools?Plugins (2), then ????? (no arrow), inside 2nd *<i>*: View?Rally Annotator (1)  
Total arrows = 3. Missing 1 arrow.

## 8. assistant (2026-06-22T01:34:39.061Z)

Confirmed defect #1: `setup.install` drops a `?` symbol. Now there's a deeper UI-label issue here too: the source presents `Tools ? Plugins and extensions` and then a separate `? Reload extensions` step. The keep-literal rules list "Tools ? Plugins and extensions" and "Reload extensions" as UI labels that stay in English ? those are preserved. But the structural `?` between them was dropped. Note also the source had `*Reload extensions*` as the menu step reached *via* the arrow. This is a symbol-preservation defect.

Let me now check the ``` byte-identical requirement and the rest of the keep-literal tokens.`

## 9. user (2026-06-22T01:34:49.608Z)

===  `byte-identical audit ===`

setup.install codes: rally\_annotator.lua, extensions -> both present byte-identical. OK

setup.record code: `<video>.rallies.csv` -> source uses `&lt;video&gt;.rallies.csv`

TRANSLATION: `&lt;video&gt;.rallies.csv` -> OK, entities preserved

setup.reasons codes: ending\_reason, unknown, winner, forced\_error, unforced\_error, service\_fault, let, other

TRANSLATION: all present as `...` byte-identical. OK

Also "." separators between them. Source: 6 middots between 7 values. Count translation middots... OK same.

=== Symbols global ===

sample: ? present. OK

annotate.kicker: . present

train.kicker: . present

setup.kicker: . present

not.kicker: none

setup.reasons middots present

heroLead: ? (em dash) and ? ... wait does heroLead have ??

SOURCE heroLead: "...the inverse ? a small,..." has em dash ?. No arrow. OK

TRANSLATION heroLead: "...????? ???? ? ???? ????,..." em dash present. OK

train.intro: ? present in source & translation

train.honestBody: ? present

not.i1: ? present

setup.record: ? (two arrows): "checklist</a> ... (...) ? annotate in VLC ? you get"

SOURCE: 2 arrows. TRANSLATION setup.record: "...(...) ? VLC ????? ???? ? ????..." = 2 arrows. OK

## 10. assistant (2026-06-22T01:34:53.011Z)

Now let me verify the inline tag inventory per key and check the `` hrefs, plus scan for any stray untranslated English in prose (not keep-literal tokens) and raw keys.

## 11. user (2026-06-22T01:35:16.910Z)

=== `<a href>` audit ===

sample: `<a href="/#join">request access</a>`

TRANSLATION: `<a href="/#join">????? ????</a>` -> href same. OK

setup.record: `<a href="/capture">one-page capture checklist</a>`

TRANSLATION: `<a href="/capture">????-???? ???? ?????? ?????? ????</a>` -> href same. OK

=== `<b>/<i>/<span>` tag-pair count per key (source vs translation) ===

heroTitle: `<span class="hl">...</span>` x1 -> trans has it. OK

heroLead: `<b style="color:#EAF3EE">owned</b>` x1 -> trans `<b style="color:#EAF3EE">????</b>`. OK

sample: `<b>...</b>` x1 -> OK

annotate.body: `<b>rally-annotator</b>`, `<b>VLC plugin</b>`, `<b>Your footage never leaves your machine.</b>` = 3 `<b>` pairs -> trans: `<b>rally-annotator</b>`, `<b>VLC ?????</b>`, `<b>???? ????</b>` = 3. OK

annotate.step1: `<b>Mark START</b>` x1 -> OK

annotate.step2: `<b>Mark END</b>` x1 -> OK

annotate.step3: `<b>ending reason</b>`, `<b>Save Rally</b>` = 2 -> trans `<b>???????? ????</b>`,

<b>Save Rally</b> = 2. OK  
 annotate.step4: <b>Edit / Delete / Undo</b> x1 -> OK  
 annotate.note: <b>VLC 3.0.x</b> x1 -> OK  
 train.reassureBody: <b>out of the box</b>, <b>optional</b> = 2 -> trans <b>????????</b>,  
 <b>????????</b> = 2. OK  
 train.intro: <b>owned</b>, <b>your</b> x3 = 4 -> trans <b>??????</b>, <b>??????</b> x3 = 4. OK  
 train.honestBody: <b>open and in active build</b>, <b>mock</b>, <b>no "Train now" button</b>,  
 <b>no accuracy claim vs a paid LLM</b>, <b>ownership, licensing, privacy and consent</b> = 5 ->  
 trans: <b>????? ????? ????? ?????????????</b>, <b>????</b>, <b>"Train now" ??? ????</b>,  
 <b>???????? LLM ????? ?????? ?????? ?????</b>, <b>?????????, ??????????, ?????? ?????  
 ??????</b> = 5. OK  
 setup.install: <b>...</b>x1, <code>x2</code>, <i>x2</i> -> OK  
 setup.record: <a>, <b>record</b>, <b>annotate</b>, <code> = OK  
 setup.train: <b>Train</b> -> trans <b>????????????</b>. OK  
 setup.joinRule: <b>byte-identical</b> -> trans <b>????-????</b>... wait tag spans? source  
 <b>byte-identical</b>. trans <b>????-????</b>???? -> tag closes mid-word, content "????-????".  
 OK structurally (1 <b> pair).

## 12. assistant (2026-06-22T01:35:21.843Z)

All inline tags and tag counts check out. Now let me scan for stray untranslated English in prose (words that should have been translated but weren't, and aren't keep-literal) and any raw keys.

## 13. user (2026-06-22T01:35:33.716Z)

=== Stray English / raw-key scan (prose that should be Kannada) ===  
 Check each translated value for Latin-script words that are NOT keep-literal tokens.

Keep-literal allowed Latin tokens: Khelsutra, VLC, "VLC 3.0.x", Rally Annotator, rally-annotator, rally\_annotator.lua, Gemini, GPT, LLM, GPU, CPU, MIT, Apache, BSD, CLI, CSV, Lua(?), and UI labels (Mark START/END, Save Rally, Edit/Delete/Undo, Reload extensions, View ? Rally Annotator, Tools ? Plugins and extensions), code contents, "Generated by Khelsutra.guru", #EAF3EE, hl, /#join, /capture.

heroLead: "?????" (transliterated stack) - fine, that's Kannada script. OK.  
 annotate.cap1: "VLC ? View ? Rally Annotator." -> View and Rally Annotator are UI labels. OK.  
 "View" is part of "View ? Rally Annotator" menu path. OK.

Now suspicious ones ? transliterated-to-Kannada is allowed (it's Kannada script). Looking only for LATIN script leftovers:

- "Save Rally" (annotate.cap2, step3) - UI label, allowed.
- "Mark START"/"Mark END" - allowed.
- "Edit / Delete / Undo" - allowed.
- "Train now" (train.honestBody) - this is a button label in quotes. Source: <b>no "Train now" button</b>. Is "Train now" a keep-literal UI label? It's referenced as a button that does NOT exist yet. Source keeps it in quotes "Train now". Keeping it English matches source intent. Borderline-OK (it's a quoted product-button name, mirrors source).
- "Generated by Khelsutra.guru" (foot.mark) - allowed.
- "Tools ? Plugins and extensions", "Reload extensions", "View ? Rally Annotator" (setup.install) - allowed.
- "Lua" (setup.install) - proper noun, fine to keep.

Latin tokens that are NOT in keep-list but appear in TRANSLATION prose? Scanning...  
 annotate.cap1 "View" standalone in "VLC ? View ? Rally Annotator" ? matches source UI path. OK.

No obvious raw dotted keys (e.g. "annotate.body") leaked into values. OK.

## 14. assistant (2026-06-22T01:35:38.646Z)

My audit is complete. The translation is very clean on the integrity lens. The single concrete defect is the dropped `?` arrow in `setup.install`, where the source's `Plugins and extensions ? <i>Reload extensions</i>` had its menu-step arrow replaced by the Kannada word `????` (and). This both drops a required symbol and slightly distorts the UI navigation path (the source

presents Reload extensions as the next menu step reached via `?`, not a coordinate item joined by "and").

#### 15. user (2026-06-22T01:35:44.975Z)

Structured output provided successfully

#### 16. assistant (2026-06-22T01:35:54.189Z)

Review complete. The Kannada translation is clean on the integrity lens with one exception: in `setup.install`, a required `?` symbol was dropped (the menu-step arrow before `*Reload extensions*` was replaced by the Kannada word `????`). All other inline HTML tags, attributes, and ordering match the source; every ``` block is byte-identical; all keep-literal tokens (KhelSutra, VLC, Gemini/GPT/LLM/GPU/CPU, MIT/Apache/BSD, rally-annotator, ending_reason enum values, file names), VLC UI labels (Mark START/Mark END/Save Rally/Edit / Delete / Undo/Reload extensions/View ? Rally Annotator/Tools ? Plugins and extensions), and the remaining symbols (? · ? ?) are preserved. No stray untranslated English in prose and no raw keys leaked into values.`
