Localize these page <title> strings to Kannada (????) for KhelSutra (badminton highlights). Concise, natural.

```
SOURCE: {
  "site.meta.index.title": "KhelSutra ? every rally indexed, the dead time gone",
  "site.meta.capture.title": "KhelSutra ? 1-page capture checklist",
  "site.meta.ownModel.title": "KhelSutra ? Annotate your footage & train your own model",
  "site.meta.privacy.title": "Privacy Policy ? KhelSutra"
}
REFERENCE (Kannada (????), reuse the wording): {
  "app_title": "???? ?????????? ?????????? ??????",
  "site_hero_title": "????? ?????????? ??????????. <span class=\"hl\">????????? ???, ???.</span>",
  "site_nav_ownModel": "????????? ??????",
  "site_privacy_title": "????????? ????",
  "site_capture_title": "1-???? ?????????? ?????????? ??????"
}
These are HTML <title> tags (the browser-tab text) ? concise, natural, no HTML. KEEP "KhelSutra" verbatim and keep the em-dash "?" and "&". REUSE the locale's already-shipped phrasings from the REFERENCE (e.g. the hero line, the privacy-page title "site_privacy_title", and the capture-page title "site_capture_title") so the tab title matches the page.
Return {"translations":{"<key>":"<value>"}} for all 4 keys.
```

2. assistant (2026-06-22T17:34:36.998Z)

I'll localize these title strings, reusing the shipped Kannada phrasings from the reference.

3. user (2026-06-22T17:34:45.808Z)

Structured output provided successfully

4. assistant (2026-06-22T17:35:02.327Z)

I've localized all 4 title strings to Kannada and returned them via StructuredOutput. The translations reuse the shipped reference phrasings (the hero line "????? ?????????? ??????????. ?????????? ???, ???", the privacy title "????????? ????", and the capture title "1-????? ?????????? ?????????? ??????"), kept "KhelSutra" verbatim, and preserved the em-dash and "&".
