Senior Hindi (?????) localizer: apply the findings, fix flagged keys, leave clean keys unchanged, obey all keep-literal + HTML rules.

This is a NON-technical Request-Access form (the visible labels, options, submit button, and the post-submit messages). Warm, plain, reassuring; match the product's existing app/site register (see REFERENCE).

KEEP THESE EXACTLY ? never translate or transliterate:

- Brand/URLs: KhelSutra, khelsutra.guru.
- Storage PRODUCT names, verbatim: "Google Drive", "OneDrive / Microsoft 365", "Dropbox" (these three keys return unchanged).
- Symbols/emoji kept: ? ? . ? ?
- "Privacy Policy" is a LINK label ? translate its words naturally for the locale (it is NOT a brand).
- "Sending?" is the button's in-flight state ? DO translate it (keep the trailing ? ellipsis).

Some values contain inline HTML ? preserve every tag EXACTLY (same tag, same attributes, same order),

translating ONLY the human-readable text between tags:

- site.join.teaser: ? ? (keep the span + ?)
- site.join.note: ? Privacy Policy. (keep the exactly; translate the link text)
- site.join.done: ??
? (keep
 and the styled exactly)

All OTHER keys are PLAIN text ? do not add any HTML to them.

Return {"translations": { ... ALL 26 keys ... }}.

I'll review the findings against the reference translations to apply fixes correctly. Let me first check the existing reference translations for the ??? gender convention and ?????? spelling.

Reference files aren't where I guessed. Let me search the repo for the existing Hindi

8. assistant (2026-06-22T16:20:47.763Z)

Let me apply the fixes:

The Storage product names, brand, URLs, HTML tags, symbols/emoji, and ellipsis are all preserved exactly. The Privacy Policy link text stays translated as ??????? ????.

Structured output provided successfully

Applied all findings against the verified reference (`locales/hi/common.json`):

****Left unchanged:**** all clean keys; the three storage product names verbatim; brand KhelSutra; symbols ? ? ? ?; HTML tags in teaser/note/done preserved exactly; Privacy Policy rendered as the natural link label ???????? ????.

All 26 keys returned via StructuredOutput.
