You are an adversarial Spanish (Español, es-ES/es-LA neutral) translation reviewer. Be strict ? find problems, don't praise. Review ONE lens only.

LENS ? MEANING/ACCURACY: does each value faithfully convey the English source ? no dropped/added claims, no softened honesty (the "experimental / in build / optional / no accuracy claim / alpha" caveats and the privacy/consent/minors promises must survive), no mistranslation, no over/under-translation?

ENGLISH SOURCE (dotted key ? value):

```
{  
  "site.reveal.share": "Share on WhatsApp",  
  "site.reveal.shareText": "Check out KhelSutra ? it turns a full badminton match into a clean highlights reel ? khelsutra.guru",

```

Rules the translation must obey:

KEEP THESE EXACTLY ? never translate or transliterate:

- Brand/URLs: KhelSutra, khelsutra.guru, and the verbatim watermark "Generated by Khelsutra.guru".
- Tools/proper nouns: VLC, "VLC 3.0.x", "Rally Annotator", rally-annotator, rally_annotator.lua, WASB, WhatsApp.
- Models/licences/acronyms: Gemini, GPT, LLM, GPU, CPU, MIT, Apache, BSD, CLI, CSV.
- Everything inside `...` stays byte-identical (the ending_reason enum values unknown/winner/forced_error/unforced_error/service_fault/let/other, <video>.rallies.csv, "extensions", file paths).
- Numbers & units literal: 1080p, 30 fps, 60 fps, ~30°, 0.1.0. Keyboard keys literal: Ctrl/Cmd + P; "PDF" stays.
- VLC UI button/menu labels that appear in the page's screenshots STAY IN ENGLISH (translate the surrounding text):
 - "Mark START", "Mark END", "Save Rally", "Edit / Delete / Undo", "Reload extensions", "View ? Rally Annotator", "Tools ? Plugins and extensions".
- Symbols/emoji kept as-is: ? · ? ? ? ° ? ?.
- Sport names MAY take their natural local form (e.g. Spanish "bádminton", "tenis de mesa") ? that is correct localization, not a violation.

Preserve every inline HTML tag EXACTLY ? same tags, same attributes, same order:

, <i>, , <code>, , and <b style="color:#EAF3EE">. Translate ONLY the human-readable text between tags. Keep </> entities and the literal text inside <code> unchanged. A link request access keeps the same href; only the link text is translated.

Return {"issues":[[key, severity (high|medium|low), problem, suggestion]]}. Only real defects under THIS lens; empty if clean.

I'll review the Spanish translation under the MEANING/ACCURACY lens. Let me analyze each value against the English source carefully.

Structured output provided successfully

4. assistant (2026-06-22T03:23:57.258Z)

I reviewed the Spanish translation under the MEANING/ACCURACY lens and completed my analysis via the StructuredOutput tool.

Summary: The translation is faithful overall. The critical honesty caveats all survive intact ? the "experimental/in build" (en desarrollo), "optional" (opcional), "no accuracy claim" (no hacemos ninguna afirmación de precisión), "alpha" (alfa), and the privacy/consent/minors promises are all accurately rendered. The strongest sections are `site.ownModel.train.honestBody` and the minors-protection strings, which carry every claim correctly.

The only notable finding is a minor meaning drift in `site.hero.lead`: "walks" (idle walking/dead-time between points) is rendered as "desplazamientos" (movements/commutes), softening the dead-time sense slightly. No high-severity defects found ? no dropped or added claims, no softened honesty caveats.
