1. user (2026-06-22T01:32:03.949Z)

You are an adversarial Hindi (??????, Devanagari U+0900?U+097F) translation reviewer. Be strict ?
your job is to FIND problems, not to praise. Review ONE lens only.

LENS ? INTEGRITY: are the inline HTML tags identical to the source (same tags/attributes/order)?
Is the text
inside <code> byte-identical? Are keep-literal tokens (KhelSutra, VLC, rally-annotator, Gemini,
GPT, LLM, GPU, MIT/Apache/BSD,
file names, ending_reason values, 1080p, 30 fps), the VLC UI labels (Mark START/Mark END/Save
Rally/?), and the symbols
? . ? ? ? ° all preserved? Is there any stray untranslated English left in prose, or any raw
key?

ENGLISH SOURCE (dotted key ? value):

```
{  
  "heroTitle": "Annotate your footage. <span class=\"hl\">Train a model that's yours.</span>",  
  "heroLead": "You can't train Gemini or GPT on your court footage. KhelSutra's direction is the  
inverse ? a small, <b style=\"color:#EAF3EE\">owned</b> rally model where the moat is your  
consented dataset, on a commercially-clean, inspectable stack you control.",  
  "nav.home": "? KhelSutra home",  
  "nav.annotate": "Annotate",  
  "nav.train": "Train your own model",  
  "nav.setup": "Setup & use",  
  "sample": "? <b>Want to see what KhelSutra produces?</b> A real sample reel plays the moment  
you <a href=\"/#join\">request access</a>.",  
  "annotate.kicker": "Step 1 · real and shipping today",  
  "annotate.title": "Annotate your footage",  
  "annotate.pill": "live today",  
  "annotate.body": "<b>rally-annotator</b> is a free, open-source (MIT) <b>VLC plugin</b> that  
turns \"watch a match\" into golden labels. While you watch your own video in VLC, you mark each  
rally's start and end plus how the point ended; it writes one row per rally to a plain CSV next  
to your video. <b>Your footage never leaves your machine.</b> It covers five net-separated  
racquet sports (badminton, tennis, table tennis, pickleball, padel).",  
  "annotate.cap1": "Enable it once: VLC ? View ? Rally Annotator.",  
  "annotate.cap2": "Mark each rally's start/end + ending reason, then Save Rally.",  
  "annotate.flowLead": "The flow, per rally:",  
  "annotate.step1": "<b>Mark START</b> on the serve-contact frame (pause/scrub for accuracy).",  
  "annotate.step2": "<b>Mark END</b> when the shuttle is dead.",  
  "annotate.step3": "Pick an <b>ending reason</b>, optionally a shot count, then <b>Save  
Rally</b> ? one CSV row.",  
  "annotate.step4": "Fix anything with <b>Edit / Delete / Undo</b>; re-open the same video later  
to continue.",  
  "annotate.note": "It's a click-driven dialog (no marking hotkeys yet), and targets <b>VLC  
3.0.x</b>.",  
}
```

```

"train.kicker": "Step 2 · the moat",
"train.title": "Train your own model",
"train.pill": "open pipeline · in build",
"train.reassureTitle": "You don't have to train anything to start.",
"train.reassureBody": "KhelSutra runs on a ready-made default, so you get rally detection and
reels <b>out of the box</b> ? nothing to set up. Training on your own footage (below) is an
<b>optional</b> power-up: a model tuned to your courts, your angles, your halls.",
"train.intro": "For those who want it, your labels feed an <b>owned</b> rally model ? trained
on <b>your</b> courts, <b>your</b> angles, <b>your</b> busy multi-court halls. The pipeline is
open and inspectable:",
"train.moat.ownTitle": "You own it",
"train.moat.ownBody": "A model and dataset that are yours to keep and improve ? not rented
inference.",
"train.moat.cleanTitle": "Commercially clean",
"train.moat.cleanBody": "MIT/Apache/BSD-only stack; we never train on a paid LLM's output.",
"train.moat.privateTitle": "Private & consented",
"train.moat.privateBody": "Footage stays yours; training use is explicit opt-in, never
automatic.",
"train.moat.minorsTitle": "Minors protected",
"train.moat.minorsBody": "Footage involving minors is never used for training and never
published.",
"train.honestTitle": "Read this honestly.",
"train.honestBody": "The labeling tool is real and shipping. The training pipeline is <b>open
and in active build</b> ? today it's a developer CLI; the no-GPU path trains a pipeline-
validation <b>mock</b>, and a real model needs a GPU. There is <b>no \"Train now\" button</b>
yet, and we make <b>no accuracy claim vs a paid LLM</b> (there's no such benchmark). The promise
here is <b>ownership, licensing, privacy and consent</b> ? not \"more accurate than Gemini,\"
and not \"one click to train.\"\"",
"setup.kicker": "Step 3 · for power users",
"setup.title": "Setup & use",
"setup.install": "<b>Install the plugin (VLC 3.0.x).</b> Copy <code>rally_annotator.lua</code>
into VLC's per-user Lua <code>extensions</code> folder (create it if missing), then VLC ? Tools
? Plugins and extensions ? <i>Reload extensions</i>, and enable it from <i>View ? Rally
Annotator</i>:",
"setup.record": "<b>Record</b> per the <a href=\"\"/capture\"\">one-page capture checklist</a>
(fixed tripod, full court, landscape, whole session) ? <b>annotate</b> in VLC ? you get
<code>&lt;video&gt;.rallies.csv</code>:",
"setup.reasons": "<code>ending_reason</code> is one of: <code>unknown</code> ·
<code>winner</code> · <code>forced_error</code> · <code>unforced_error</code> ·
<code>service_fault</code> · <code>let</code> · <code>other</code>. Times are decimal seconds;
downstream tools read by column name.",
"setup.train": "<b>Train</b> (developer CLI). A GPU-free dry run validates the whole pipeline
on a CPU mock; a real model needs a GPU:",
"setup.joinRule": "One join rule: keep the video <b>byte-identical</b> to what you annotated
(don't re-encode after labeling) ? labels match videos by content hash.",
"not.kicker": "So expectations stay honest",
"not.title": "What this is not",
"not.i1": "Not a one-click trainer ? training is an offline CLI today.",
"not.i2": "Not in-browser ? labeling runs in VLC on your machine.",
"not.i3": "Not an accuracy claim vs Gemini/GPT ? no such benchmark.",
"not.i4": "Shot-type, player and score detection are roadmap.",
"cta.title": "Want in?",
"cta.button": "Request alpha access",
"foot.flyer": "Academy flyer:",
"foot.mark": "Reels carry a \"Generated by Khelsutra.guru\" mark."
}

```

```

KEEP-LITERAL & HTML rules the translation must obey:

KEEP THESE EXACTLY ? never translate or transliterate them:

- Brand/URLs: KhelSutra, khelsutra.guru, and the watermark text "Generated by Khelsutra.guru".
- Tools/proper nouns: VLC, "VLC 3.0.x", "Rally Annotator", rally-annotator, rally_annotator.lua, WASB.

- Models/licences/acronyms: Gemini, GPT, LLM, GPU, CPU, MIT, Apache, BSD, CLI, CSV.

- Everything inside <code>...</code> stays byte-identical (commands, paths, the ending_reason enum values

unknown / winner / forced_error / unforced_error / service_fault / let / other, <video>.rallies.csv, "extensions", the python command lines).

- Numbers & units literal: 1080p, 30 fps, 60 fps, ~30°, 0.1.0.

- VLC UI button/menu labels that appear in the page's screenshots STAY IN ENGLISH so the text matches what the

user sees on screen: "Mark START", "Mark END", "Save Rally", "Edit / Delete / Undo", "Reload extensions",

"View ? Rally Annotator", "Tools ? Plugins and extensions". Translate the sentence AROUND them.

- Symbols/punctuation kept as-is: ? . ? ? ? °.

Preserve every inline HTML tag EXACTLY as in the source ? same tags, same attributes, same order:

, <i>, , <code>, , and <b style="color:#EAF3EE">. Only the human-readable text

BETWEEN tags is translated. Keep the < / > entities and the literal text inside <code> unchanged.

A link like request access keeps the same href; only "request access" is translated.

Return {"issues": [{key, severity (high|medium|low), problem, suggestion}]}. Only real defects under THIS lens.

Empty array if the translation is clean on this lens.

2. assistant (2026-06-22T01:32:11.512Z)

I'll review the Hindi translation for the INTEGRITY lens, checking HTML tags, code content, keep-literal tokens, UI labels, symbols, and any stray untranslated text or raw keys.

Let me work through each key systematically.

After careful comparison:

heroTitle: `<span class="hl">` preserved. OK.

heroLead: `<b style="color:#EAF3EE">` preserved. Gemini, GPT, KhelSutra kept. OK.

sample: `?`, `<b>`, `<a href="/#join">` preserved with same href. OK.

****annotate.cap1**:** `VLC ? View ? Rally Annotator` ? preserved, arrows kept. OK.

****setup.install**:** ``rally_annotator.lua``, ``extensions``, `*Reload extensions*`, `*View ? Rally Annotator*` ? all preserved. But the source has `VLC ? Tools ? Plugins and extensions ? *Reload extensions*` with an arrow `?` before `*Reload extensions*`. The translation has `VLC ? Tools ? Plugins and extensions ?? *Reload extensions*` ? the `?` was replaced with `??` (and). Let me verify this carefully.

3. user (2026-06-22T01:32:12.588Z)

SOURCE: VLC ? Tools ? Plugins and extensions ? Reload extensions

TRANS: VLC ? Tools ? Plugins and extensions ?? Reload extensions

4. assistant (2026-06-22T01:32:16.740Z)

I confirmed the `?` arrow before `Reload extensions` was replaced. Now let me verify the ending_reason enum and code content byte-identical, and scan for the WASB/other tokens and the `<video>.rallies.csv`.

5. user (2026-06-22T01:32:19.124Z)

=== setup.reasons code enum ===

SRC: unknown · winner · forced_error · unforced_error · service_fault · let · other

TRN: unknown · winner · forced_error · unforced_error · service_fault · let · other

=== setup.record csv token ===

SRC: <video>.rallies.csv

TRN: <video>.rallies.csv

6. assistant (2026-06-22T01:32:28.645Z)

Both are byte-identical. Let me complete the review of the remaining keys for HTML tags, literal tokens, and stray English.

Checking the rest:

- ****annotate.note**:** `**VLC 3.0.x**` preserved. OK.
- ****annotate.step1/2/3/4**:** `Mark START`, `Mark END`, `Save Rally`, `Edit / Delete / Undo` all kept in English with `**` tags. OK.**
- ****train.honestBody**:** `"Train now"` button label kept; `Gemini`, `LLM`, `GPU` kept; all `**` tags preserved. OK.**
- ****train.moat.cleanBody**:** `MIT/Apache/BSD`, `LLM` kept. OK.
- ****setup.train**:** `GPU`, `CPU`, `CLI` kept. OK.
- ****not.i3**:** `Gemini/GPT` kept. OK.
- ****foot.mark**:** watermark `"Generated by Khelsutra.guru"` kept exactly. OK.
- ****cta/nav/foot**:** no tags, KhelSutra kept where present.

All HTML tags, code content, enum values, watermark, UI labels, and other symbols are preserved. No raw keys or stray untranslated English in prose.

The one real defect: in ****setup.install****, the source uses the symbol `?` to connect `Plugins and extensions` to `Reload extensions` (matching the on-screen menu navigation `Tools ? Plugins and extensions ? Reload extensions`), but the translation replaced that `?` with the Hindi word `??` (and). The rules require the `?` symbol to be preserved as-is, and this also breaks the menu-navigation arrow chain that mirrors the VLC UI.

7. assistant (2026-06-22T01:32:32.353Z)

```
{"issues":[{"key":"setup.install","severity":"medium","problem":"The source connects the menu steps with the arrow symbol '?' that must be preserved as-is: 'VLC ? Tools ? Plugins and extensions ? Reload extensions'. The translation replaces the second '?' (before Reload extensions) with the Hindi word '??' (and): 'VLC ? Tools ? Plugins and extensions ?? Reload extensions'. This drops a required '?' symbol and breaks the menu-navigation arrow chain that mirrors the VLC UI path.", "suggestion":"Restore the arrow: '... ??? VLC ? Tools
```

? Plugins and extensions ? <i>Reload extensions</i>, ?? ??? ...' (keep the '?' before <i>Reload extensions</i>; the '??'/comma can join into the following '??? ... ????' clause instead)."}]]}

8. user (2026-06-22T01:32:32.355Z)

Output does not match required schema: root: must have required property 'issues'

9. assistant (2026-06-22T01:32:35.370Z)

The schema expects `issues` at the root, not nested under `input`.

10. user (2026-06-22T01:32:37.271Z)

Structured output provided successfully

11. assistant (2026-06-22T01:32:44.608Z)

Review complete. Under the INTEGRITY lens, the Hindi translation is clean except for one medium-severity defect:

- **setup.install**: The required `` symbol before ``<i>Reload extensions</i>`` was replaced with the Hindi word "???" (and), dropping a kept-symbol and breaking the VLC menu-navigation arrow chain.

Everything else checks out: all inline HTML tags (`<b>`, `<i>`, `<a href>`, `<code>`, `<span class="hl">`, `<b style="color:#EAF3EE">`) match the source in tags/attributes/order; `<code>` contents are byte-identical (including the full `ending\_reason` enum and `<video>.rallies.csv`); all keep-literal tokens (KhelSutra, VLC, Gemini, GPT, LLM, GPU, CPU, CLI, CSV, MIT/Apache/BSD, rally-annotator, rally_annotator.lua, VLC 3.0.x) are intact; UI labels (Mark START/Mark END/Save Rally/Edit / Delete / Undo/Reload extensions/View ? Rally Annotator/Tools ? Plugins and extensions) stay in English; the watermark "Generated by Khelsutra.guru" is exact; and symbols (? · ?) are otherwise preserved. No raw keys or stray untranslated English in prose.
