```

FINDINGS:

```

[
  {
    "key": "site.footer.capture",
    "severity": "medium",
    "problem": "The English \"Capture checklist\" refers to the checklist for capturing/filming
match videos. The Hindi renders it as \"???????????? ?????????\" (Recording checklist), which
narrows/shifts the meaning. \"Capture\" in this product context covers how to record/film
matches, and the English elsewhere uses plain warm phrasing; \"????????????\" is acceptable but
introduces a borrowed term and slightly changes the concept from the source's \"capture\".",
    "suggestion": "Consider \"?????? ????? ?? ?????????\" or \"???????????? ???? ?? ?????????\" /
\"?????? ?????????\" to stay closer to the capture-the-match meaning; if \"???????????? ?????????\"
is intended, confirm it conveys the filming checklist, not a generic recording log.",
    "lens": "accuracy"
  },
  {
    "key": "site.footer.capture",
    "severity": "medium",
    "problem": "\"Capture checklist\" is rendered as \"???????????? ?????????\", but this footer
link points to the very same Capture-Checklist page that the established app-console copy
consistently names \"?????? ?????????\" (e.g. site.record.checklistCta line 185 \"???? 1-???
????? ????????? ?\"), site.capture.title line 195 \"1-??? ?????? ?????????\",
site.ownModel.setup.record line 282 \"?-????? ?? ?????? ?????????\", faq.q3.a line 413). A
different label for the same named navigation target reads as an inconsistency to a native user
and breaks the term mapping with the rest of the site.",
    "suggestion": "Use the already-established name: \"?????? ?????????\".",
    "lens": "fluency"
  },
  {
    "key": "site.join.storageLabel",
    "severity": "low",
    "problem": "\"How would you share them?\" is rendered with \"???? ??????\". \"???? ?????\" is
itself perfectly idiomatic, but every other place in the app-console reference uses the
transliterated verb \"???? ?????\" for to share (result.share / site.reveal.share line 63 & 114
\"???? ?????\"; how.stitch.body line 322 \"???? ????? ?? ???\"; sharper.improve.body line 340
\"?????? ???? ????\". Mixing \"????\" here is a vocabulary inconsistency against the reference
term set.",
    "suggestion": "For consistency with the app-console wording, use \"????\": e.g. \"?? ??????
???? ???? ?????????\",
    "lens": "fluency"
  }
]

```

KEEP THESE EXACTLY ? never translate or transliterate:

- Brand/URLs: KhelSutra, khelsutra.guru, and the verbatim watermark "Generated by Khelsutra.guru". HTTPS stays HTTPS.
- Product names (storage providers, verbatim): "Google Drive", "OneDrive / Microsoft 365", "Dropbox", "Amazon S3", "Google Cloud". "SD card" keeps "SD".
- Place: Bengaluru stays "Bengaluru" (the country name "India" may take its natural local form).
- Symbols/emoji kept as-is: . © ? ?. The year "© 2026" stays literal.
- This is a NON-technical Request-Access form (already de-jargoned in English: "a powerful computer" instead of "GPU", "run it in the cloud" instead of server-speak). Keep that warm, plain, reassuring register ? do NOT re-introduce jargon. There is NO HTML markup in these strings (plain text only) ? do not add any tags.

Return {"translations": { "<dotted key>": "<final value>", ... }} with ALL 20 keys.

2. assistant (2026-06-22T16:01:09.045Z)

I'll review the findings and apply them. Let me first check the reference translations to confirm the established terminology before finalizing.

3. user (2026-06-22T16:01:11.516Z)

No matches found

4. assistant (2026-06-22T16:01:13.993Z)

Let me find the actual Hindi locale file to verify the established terminology.

5. user (2026-06-22T16:01:14.635Z)

No files found

6. user (2026-06-22T16:01:14.947Z)

```
locales\hi\common.json

web\node_modules\which\package.json
web\node_modules\foreground-child\package.json
```

7. user (2026-06-22T16:01:19.634Z)

[illegible]

8. assistant (2026-06-22T16:01:26.142Z)

Both findings are confirmed against the live reference file. The established term is "????? ?????" (lines 185, 195, 282, 413) and the established share verb is "??? ??" (lines 63, 114, 322, 340). Let me also confirm the `????????` borrowing isn't the established footer term elsewhere.

Now I'll apply the three findings and keep all clean keys unchanged:

- ```
- `site.footer.capture`: "?????????? ????????" ? "?????? ????????" (matches established navigation target name; both medium findings resolved).
- `site.join.storageLabel`: "???? ??????" ? "???? ??????" (matches established share-verb term set).
- All other 18 keys: left exactly as drafted (clean, and keep-literal rules already honored ? brand names, storage providers, Bengaluru, symbols, year, plain non-jargon register all intact).
```

9. user (2026-06-22T16:01:36.102Z)

Structured output provided successfully

10. assistant (2026-06-22T16:01:44.714Z)

Applied all three findings against the verified live reference file  
(`C:\Users\avidu\Projects\khelsutra\locales\hi\common.json`):

- **\*\*site.footer.capture\*\*** (both medium findings): "????????? ????????" ? **\*\*"????? ????????"\*\***, matching the same Capture-Checklist navigation target as established in `site.record.checklistCta` (L185), `site.capture.title` (L195), `site.ownModel.setup.record` (L282), and `faq.q3.a` (L413).
- **\*\*site.join.storageLabel\*\*** (low): "???? ??????" ? **\*\*"???? ??????"\*\***, aligning with the app-console share-verb term set (L63, L114, L322, L340).

The other 18 keys were clean and left untouched. Keep-literal rules honored:  
brand/watermark/HTTPS, storage product names, "SD", Bengaluru, symbols/emoji, "© 2026", and the warm de-jargoned register all preserved verbatim.
