1. user (2026-06-22T03:49:01.181Z)

Adversarially verify this P2c review finding by reading the cited code in C:\\Users\\avidu\\Projects\\khelsutra-p2c yourself (run `cd C:\\Users\\avidu\\Projects\\khelsutra-p2c && git diff origin/master...HEAD`). Is it a REAL defect to fix, or a false alarm/nit? Default is_real=false if it doesn't hold up.

Lens: i18n-integration
Severity(claimed): nit
Title: kn wizard glues the Latin brand to the Kannada suffix without a space (breaks the established kn spacing convention)
File: locales/kn/common.json
Detail: wizard.title is "KhelSutra???? ??????" and wizard.offline is "KhelSutra????? ?" ? the Kannada case suffix is concatenated directly onto the Latin brand with no separating space. Every PRE-EXISTING kn string keeps a space before the postposition (e.g. ingest.intro "KhelSutra ??????", errors.networkError uses "KhelSutra ??????", site.ownModel.heroLead "KhelSutra ?", train.reassureBody "KhelSutra ?????"). The hi additions correctly use a space ("KhelSutra ???"). This passes the #77 brand-Latin guard (catalog-invariants.test.ts block 2 only checks .includes("KhelSutra")), so it is not a test/functional failure ? purely a readability/consistency nit best confirmed by the native-speaker review gate.
Fix: Insert a space before the Kannada suffix in the two kn wizard strings: "KhelSutra ????? ??????" and "KhelSutra ????? ??", matching the spacing used in the existing kn ingest.*/errors.*/site.* brand references.

2. assistant (2026-06-22T03:49:02.942Z)

I'll verify this finding by examining the actual code in the cited repository.

6. assistant (2026-06-22T03:49:11.354Z)

The finding's quoted strings are accurate. Now let me verify the claimed pre-existing kn brand references that use a space before the postposition.

7. user (2026-06-22T03:49:12.853Z)

```

```

8. assistant (2026-06-22T03:49:20.652Z)

Every pre-existing kn brand reference uses a space after "KhelSutra" before the following word/postposition. Let me look closely at the most directly comparable cases ? those where a Kannada case suffix (vibhakti) attaches to the brand.

The finding cites these specific pre-existing examples:

- `ingest.intro` (line 77): `"KhelSutra ????? ..."` ? space before ???? (accusative)
- `errors.networkError` (line 97): `"KhelSutra ?????..."` ? space
- `site.ownModel.heroLead` (line 222): `"KhelSutra ? ..."` ? space before ? (genitive)
- `train.reassureBody` (line 249): `"KhelSutra ???..."` ? space

All confirmed. Now let me verify the new wizard strings concatenate without a space:

`"KhelSutra?????"` and `"KhelSutra?????"`. The diff above confirms both ? no space before ???? (dative) or ???? (accusative).

Let me also verify the hi additions use a space, as the finding claims, and check the offline string's existing parallel.

9. user (2026-06-22T03:49:23.519Z)

=== hi wizard additions ===

```
+   "title": "KhelSutra ??? ???? ?????? ?",  
+   "offline": "KhelSutra ? ???? ????? ? ? ? ???? ???? , ? ???? ?????? ?????? ? ? ?  
???? ????",  
+   "missing": "??? ? ? AI ????? ? ? ? ? ? ? KhelSutra ?????? ? ? ? ?????? ? ? ?  
??? ???? ? ? ?",
```

```
+      "how": "????? ?????????? ?????? ?????? Gemini ????? ???, ???? KhelSutra ?????? ?? .env
????? ??? GEMINI_API_KEY=? ??????, ??? ?????? ???? ??????",
+      "ffmpegMissing": "ffmpeg ???? ???? ? KhelSutra ?? ?????? ?????? ?? ?????? ?? ??? ???
????????? ??????",
+      "body": "????? ???? ??, ?? ?????? ?????? ?????? ?? ?????? ?????? ?????? ?????? ? KhelSutra ????
??? ?????????? ?????????? ???",

=== kn: existing offline-equivalent (networkError) uses space; new wizard.offline does NOT ===
97:      "networkError": "KhelSutra ??????????????????. ??? ??????????????????",
296:      "offline": "KhelSutra????? ?????????????? ? ?????? ?????????????, ???? ?????? ?????? ??????????.
????????? ??????????????????.",
```

10. assistant (2026-06-22T03:49:29.741Z)

This is a strong confirmation. The contrast is especially sharp:

- New `wizard.offline` (line 296): `"KhelSutra????? ?????????????? ..."` ? no space, brand glued to ?????
- Pre-existing `errors.networkError` (line 97): `"KhelSutra ?????????????????? ..."` ? space before the same verb stem ????

And the hi additions consistently use a space (`"KhelSutra ???"`, `"KhelSutra ?? "`), so the inconsistency is specific to kn.

Now let me verify the finding's claim about the #77 brand-Latin guard test ? that it only checks `.includes("KhelSutra")` and thus does NOT catch this spacing issue (i.e., this is genuinely not a test failure, correctly classified as a nit).

11. user (2026-06-22T03:49:31.225Z)

```
./web/src/i18n/catalog-invariants.test.ts
```

12. user (2026-06-22T03:49:34.624Z)

```
52-// (2) Brand ? never transliterated, and present (Latin) on EVERY key en uses it on. The
positive rule
53-\ is the real guard: self-maintaining (auto-covers future brand keys, incl. errors.* /
ingest.hint that
54-// the old 3-key denylist missed) and it catches ANY transliteration spelling at once ? a
transliterated
55-// value simply won't contain Latin "KhelSutra". The Indic-spelling denylist is cheap
defence-in-depth.
56:describe("catalog content ? the brand stays Latin 'KhelSutra' everywhere en uses it", () => {
57:   const brandKeys = Object.keys(en).filter((k) => en[k].includes("KhelSutra"));
58-
59-   it("en actually carries the brand on several keys (so the guard is meaningful)", () => {
60-     expect(brandKeys.length).toBeGreaterThanOrEqual(6);
61-   });
62-
63-   for (const loc of ["kn", "hi"] as const) {
64-     it(`${loc}: Latin "KhelSutra" is present on every key whose en value uses it`, () => {
65-       const e = load(loc);
66-       const missing = brandKeys.filter((k) => !(e[k] ?? "").includes("KhelSutra"));
67-       expect(missing).toEqual([]);
68-     });
69-   }
70-
71-   --
72-   for (const loc of ["kn", "hi"] as const) {
73-     it(`${loc}: the known Indic transliteration of the brand never appears`, () => {
74-       const offenders = Object.entries(load(loc))
75-         .filter(([ , v]) => v.includes(TRANSLIT[loc]))
76-         .map(([k]) => k);
77-       expect(offenders).toEqual([]);
78-     });
79-   }
80-}
```

```

--
98-         for (const w of ENGLISH) {
99-             const present = [
100-                 ...(new RegExp(`\b${w}\b`, "i").test(val) ? [w] : []),
101-                 ...TRANSLIT[loc][w].filter((t) => val.includes(t)),
102-             ];
103-             for (const term of present) if (!enUsesWord(w)) violations.push({ key, term, en:
en[key] ?? "(absent)" });
104-         }

```

13. assistant (2026-06-22T03:49:42.285Z)

Confirmed. The brand guard (line 57, 66) uses `\.includes("KhelSutra")` ?` a substring check. ``"KhelSutra?????"`` and ``"KhelSutra???? ??????"`` both contain the substring ``"KhelSutra"``, so they pass. The transliteration-denylist check (line 73-78) looks for an Indic spelling of the brand, which is also not triggered since the brand stays Latin. So the finding is correct that this is not a test/functional failure.

Let me also confirm these test keys are flattened (dot-notation) so the wizard.* nested keys actually become brand-bearing keys, and that the test loader flattens ? to make sure the strings are even exercised. Actually, the more important verification: is ``wizard.title`/`wizard.offline`` an ``en``-brand key (so the kn check would even compare it)? Either way it passes the guard. The finding's classification as a non-failing nit holds regardless.

Let me do one final sanity check on whether the run produces a green test suite (i.e., this genuinely doesn't break CI), by confirming the test file's ``load`/`en`` flattening structure briefly.

14. user (2026-06-22T03:49:42.988Z)

```

1      // Content regression guards for the localization catalogs ? the rules the adversarial
translation
2      // audit (#77) established, pinned so the specific bugs can never silently return. This
complements
3      // hygiene.test.ts (which proves key/placeholder PARITY) by asserting catalog CONTENT.
Each block maps
4      // to a concrete #77 bug class; the mutation that reintroduces the bug fails here. Pure
data assertions
5      // over repo-root /locales (D-CATALOG-HOME) ? no render context needed.

49          }
50      });

```

15. assistant (2026-06-22T03:49:56.518Z)

This fully confirms the test mechanics. The catalog is flattened via `flatEntries`, so `wizard.title` and `wizard.offline` become keys like `"wizard.title"` with values `"KhelSutra???? ??????"`. The brand guard (line 57/66) does a substring `.includes("KhelSutra")` check, which passes regardless of the missing space. No invariant in this file checks spacing around the brand. So the finding is correctly classified as not a test/functional failure.

I have independently verified every load-bearing claim:

1. The two new kn wizard strings DO glue the Kannada case suffix directly onto the Latin brand with no space: `"KhelSutra???? ??????"` (dative ????) and `"KhelSutra????? ?"` (accusative ?????). Confirmed in the diff and HEAD.
2. Every pre-existing kn brand reference uses a space before the following word/postposition ? including the directly parallel `ingest.intro` ("KhelSutra ?????"), `errors.networkError` ("KhelSutra ?????"), `site.ownModel.heroLead` ("KhelSutra ?"), `train.reassureBody` ("KhelSutra ?????"). The sharpest contrast: the new `wizard.offline` glues the brand to ???- via ?????, while pre-existing `errors.networkError` writes the same verb stem as "KhelSutra ??????" with a space.
3. The hi additions correctly use a space ("KhelSutra ???", "KhelSutra ??"), so the defect is kn-specific and the inconsistency is internal to the new PR.
4. The #77 brand guard in `catalog-invariants.test.ts` (lines 57, 66) is a substring `.includes("KhelSutra")` check; the new strings contain that substring and pass. No invariant checks brand spacing. So it is genuinely not a test/functional failure ? purely a readability/consistency nit.

The finding holds up as a real, low-severity consistency defect, correctly scoped as a nit best confirmed at the native-speaker review gate. The proposed fix (inserting a space: `"KhelSutra ??? ? ??????"` and `"KhelSutra ????? ?"`) matches the existing kn convention.

16. user (2026-06-22T03:50:05.785Z)

Structured output provided successfully

17. assistant (2026-06-22T03:50:13.499Z)

Verified. The finding is REAL (severity: nit). Every load-bearing claim held up under independent inspection of the cited code: the two new kn wizard strings glue the Kannada case suffix onto the Latin brand without a space, contradicting the consistent space-before-postposition convention in all pre-existing kn brand strings (including the directly parallel `errors.networkError` using the same ???- stem with a space), while the hi additions correctly use a space. The finding is also correct that this passes the #77 brand guard (substring `.includes("KhelSutra")`) and is therefore a cosmetic consistency nit, not a test/functional failure ? best confirmed at the native-speaker review gate.
