You are a strict, native-level Kannada (?????) reviewer of UI microcopy for KhelSutra ? a friendly automatic badminton-highlights product. Audience: non-tech-savvy coaches, parents and players in India.

STEP 1 ? Read the English source map (Read tool): undefined/_tmp_site_en_flat.json

STEP 2 ? Read the Kannada (?????) translation map (Read tool): undefined/_tmp_kn_flat.json

Both are flat JSON maps with the SAME keys.

STEP 3 ? Review EVERY key, but ONLY through this lens:

TECHNICAL INTEGRITY: ... tags must be present and wrap the right word(s) (same count as English); brand "KhelSutra" kept in Latin script; literal tokens kept exactly (1080p, 1080p+, 30 fps, 60 fps, 30°, Audio ON, PDF, Ctrl/Cmd + P); the arrow "?" and middot "." kept where English has them; no leftover untranslated English except those tokens.

STEP 4 ? Write (Write tool) a JSON array to exactly: undefined/_tmp_issues_kn_integrity.json

Each element: {"key": "<dotted key e.g.

record.place.body>", "severity": "critical"|"minor", "problem": "<short English note>", "suggestion": "<the FULL corrected Kannada (?????) value for that key, preserving tags and literal tokens>"}.

Include ONLY keys with a REAL problem through THIS lens. If there are none, write []. Be precise and conservative ? do not invent problems, and do not re-flag good translations.

STEP 5 ? Return the summary object {flagged: <number of issues you wrote>, wrote:

"undefined/_tmp_issues_kn_integrity.json"}.

I'll start by reading the two source files.

The files don't exist at the literal path `undefined/`. The prompt has `undefined` placeholders for the directory. Let me locate the actual files.

The files aren't in the repo. The `undefined/` prefix suggests a temp directory that wasn't substituted. Let me search the filesystem more broadly, including temp locations.

Found them in `C:\Users\avidu\Projects\khelsutra-fu-wt\`. The `undefined/` prefix should resolve to that directory. Let me read both files.

Both files are read. Now let me review each key through the technical-integrity lens only. Let me verify each systematically.

Let me check the `**` tag counts and literal tokens key by key:**

```

- **hero.lead**: EN no ``. KN no ``. Brand "KhelSutra" Latin: present. Arrow/middot: none
in EN. OK.
- **hero.eyebrow**: EN has `.` middot. KN has `.`. OK.

```

All `**` counts match, all literal tokens preserved, brand kept in Latin, arrows and middots**

preserved, no leftover untranslated English beyond allowed tokens. Through the technical-integrity lens, I find no real problems.

Let me write the empty issues array.

I reviewed all 56 keys through the technical-integrity lens only.

Findings: no issues. Specifically verified:

- `**` tag counts match English in every key (e.g. record.place.body = 2, record.settings.body = 3, capture.step2.b2 = 2), and they wrap the correct corresponding words.**
- Literal tokens preserved exactly: `1080p`, `1080p+`, `30 fps`, `60 fps`, `30°`, `~30°`, `Audio ON`, `PDF`, `Ctrl/Cmd + P`.
- Brand "KhelSutra" kept in Latin script in all occurrences (hero.lead, record.intro, record.upload.body, capture.step4.b2).
- Arrow `?` preserved (record.title, record.checklistCta, ownModel.requestAccess) and middot `·` preserved (hero.eyebrow).
- No leftover untranslated English beyond the allowed literal tokens.

Wrote `[]` to `C:\Users\avidu\Projects\khelsutra-fu-wt\\_tmp\_issues\_kn\_integrity.json`. Note: the prompt's `undefined/` path prefix didn't resolve; the actual files live in `C:\Users\avidu\Projects\khelsutra-fu-wt\`, so I read from and wrote to that directory.

I reviewed all 56 keys of the Kannada translation against the English source through the technical-integrity lens only, and found no issues.

Verified:

- `**` tag counts match English in every key, wrapping the correct corresponding words.**
- Literal tokens preserved exactly: `1080p`, `1080p+`, `30 fps`, `60 fps`, `30°/~30°`, `Audio ON`, `PDF`, `Ctrl/Cmd + P`.
- Brand "KhelSutra" kept in Latin script everywhere it appears.
- Arrow `?` and middot `·` preserved where English has them.
- No leftover untranslated English beyond the allowed tokens.

Wrote `[]` to `C:\Users\avidu\Projects\khelsutra-fu-wt\\_tmp\_issues\_kn\_integrity.json`.

One note: the prompt's `undefined/` path prefix did not resolve to a real directory. The actual files live in `C:\Users\avidu\Projects\khelsutra-fu-wt\`, so I read from and wrote to that directory.
