Transcript

1. user (2026-06-25T17:38:04.185Z)

Adversarially verify this PR-review finding for PR #385 (branch b1-p9/remove-fabricated-motion-data checked out; read the code ? STRICT READ-ONLY, do NOT edit any file). Be skeptical ? default to INVALID if wrong, already-handled, or a non-issue.

Finding [NIT] Legacy (unmounted) static demo UI would render `null ? null` for server/receiver ? pre-existing, out of scope

Location: backend/api/static/app.js:223

Detail: `backend/api/static/app.js:223` renders `Rally #\${rally.id} (Serve: \${rally.server} ? Receive: \${rally.receiver})`. With motion now passing server/receiver=None, this would display "Serve: null ? Receive: null". However, this is not a regression introduced by this PR: (1) `backend/api/static/` is not mounted anywhere in `backend/api/\*.py` (no `StaticFiles`/`mount`), so it is dead/legacy demo UI, not the served LIGHT-tier SPA; and (2) gemini.py and yolo_hybrid.py already pass server/receiver=None, so this UI would already render `null` for those detectors. Flagging only for completeness ? no action needed for this PR.

Suggestion: No change required for this PR. If the legacy static UI is ever revived, guard the server/receiver render with a fallback (e.g. show "unknown" when null); otherwise consider removing the dead `backend/api/static/` demo separately.

Return isReal + adjustedSeverity (INVALID if not real) + one-paragraph reasoning grounded in the actual code.

2. assistant (2026-06-25T17:38:06.241Z)

I'll verify this finding by examining the actual code.

3. user (2026-06-25T17:38:07.877Z)

```
210         renderEmptyRallies("No rallies found matching your filters.");
211         return;
212     }
213
214     rallies.forEach(rally => {
215         const card = document.createElement("div");
216         card.className = `rally-card ${selectedRallyIds.has(rally.id) ? 'selected' :
217 ''}`;
218         card.setAttribute("id", `rally-card-${rally.id}`);
219
220         const meta = document.createElement("div");
221         meta.className = "rally-meta";
222
223         const title = document.createElement("h3");
224         title.textContent = `Rally #${rally.id} (Serve: ${rally.server} ? Receive:
225 ${rally.receiver})`;
```

```

225         const sub = document.createElement("p");
226         sub.innerHTML = `
227             <span><strong>Start:</strong> ${formatTime(rally.start_time)}</span>
228             <span><strong>End:</strong> ${formatTime(rally.end_time)}</span>
229         `;
230
231         const tagsDiv = document.createElement("div");
232         tagsDiv.className = "rally-tags";
233
234         // Long rally tag
235         if (rally.duration > 10) {
236             const longTag = document.createElement("span");
237             longTag.className = "rally-tag long";
238             longTag.textContent = "Long Rally";
239             tagsDiv.appendChild(longTag);

```

eabf774 fix(B1/P9): remove fabricated data from motion segmenter
b1-p9/remove-fabricated-motion-data

5. assistant (2026-06-25T17:38:11.959Z)

Let me verify the claims in the finding: that the static dir is unmounted, and that motion/gemini/yolo pass server/receiver=None.

6. user (2026-06-25T17:38:13.342Z)

```

backend\main.py:41:from fastapi.staticfiles import StaticFiles
backend\main.py:231:app.mount("/static", StaticFiles(directory=_STATIC_DIR), name="static")
backend\main.py:242:    app.mount("/assets", StaticFiles(directory=_UI_ASSETS_DIR),
name="assets")

```

7. user (2026-06-25T17:38:15.129Z)

No matches found

8. user (2026-06-25T17:38:15.840Z)

194: value. Matches yolo_hybrid/gemini, which pass ``server=None, receiver=None``.

9. assistant (2026-06-25T17:38:18.806Z)

The finding claims the static dir is "not mounted anywhere in `backend/api/\*.py`" ? but it IS mounted, in `backend/main.py:231`. Let me check what `\_STATIC\_DIR` points to and what serves the rally UI.

10. user (2026-06-25T17:38:19.757Z)

```

220     # Serves static frontend files directly (now under api/ per approved structure).
221     # PACKAGING_PLAN.md P0a: resolve PACKAGE-relative (not CWD-relative) so launching from
an
222     # arbitrary directory finds the shipped assets instead of creating a stray
./backend/api/static.
223     # (The legacy in-engine dashboard; the real SPA gets bundled here in P1a.)
224     _STATIC_DIR = os.path.join(os.path.dirname(os.path.abspath(__file__)), "api", "static")
225     try:
226         os.makedirs(_STATIC_DIR, exist_ok=True)
227     except OSError:
228         # The dir ships with the package (a no-op create); guard against a read-only install
229         # tree (system-installed Python) since exist_ok suppresses FileExistsError, not
PermissionError.
230         pass
231     app.mount("/static", StaticFiles(directory=_STATIC_DIR), name="static")

```

```

232
233     # P1b: serve the bundled KhelSutra SPA single-origin. `backend/ui/` is the committed
snapshot
234     # (produced by scripts/bundle_ui.sh); fall back to the legacy in-engine dashboard only
if it's
235     # absent (a source checkout with no vendored UI). The SPA calls same-origin `/api`, so
no SPA change
236     # is needed; it is query-param driven (?video=?), so serving index.html at `/` + /assets
is enough
237     # (no client-side path routing ? no history-fallback catch-all, which would also be a
route-order hazard).

```

13. assistant (2026-06-25T17:38:26.822Z)

The key facts are now clear. Let me verify the legacy `app.js` is actually reachable via the mounted `/static` route and whether `index.html` references it, to understand whether it's truly dead.

14. user (2026-06-25T17:38:28.938Z)

16. assistant (2026-06-25T17:38:39.064Z)

Now I have a complete picture. The legacy static UI (`/static/index.html` + `app.js`) IS mounted and reachable, but it's only served at `/` as a fallback when the bundled SPA (`backend/ui/index.html`) is absent. In this repo the bundled SPA exists, so the legacy dashboard is not served at `/`. However, `/static/index.html` and `/static/app.js` ARE directly reachable via the mounted `/static` route regardless.

The finding's core factual claim ("not mounted anywhere in `backend/api/\*.py`") is technically true as literally stated (the mount is in `backend/main.py`, not `backend/api/\*.py`), but the framing ? that it's "dead/legacy demo UI, not the served LIGHT-tier SPA" ? is essentially correct: it's the legacy in-engine dashboard, superseded by the bundled SPA, and only a fallback. The substantive conclusions are accurate: motion now passes `server=None`, receiver=None` (confirmed at motion.py:204, and the docstring at line 194 confirms it matches yolo\_hybrid/gemini), so this legacy UI would render `null ? null` ? and gemini/yolo would already have done so. Not a regression introduced by this PR.

The finding correctly self-classifies as NIT and says no action needed for this PR. Let me confirm gemini/yolo actually pass None as claimed.

17. user (2026-06-25T17:38:40.301Z)

```

backend\pipeline\segmenters\motion.py:204:         segment_id =
self.db.add_play_segment(video_id, start, end, None, None, metadata)
C:\Users\avidu\Projects\badminton-highlight-indexer\backend\pipeline\segmenters\motion.py-205-
segments_data.append({
--
backend\pipeline\segmenters\trajectory_hybrid.py:464:         segment_id =

```

```

self.db.add_play_segment(
C:\Users\avidu\Projects\badminton-highlight-
indexer\backend\pipeline\segmenters\trajectory_hybrid.py-465-           video_id,
start, end, None, None, metadata
--
backend\pipeline\segmenters\yolo_hybrid.py:351:           segment_id =
self.db.add_play_segment(video_id, start, end, None, None, metadata)
backend\pipeline\segmenters\yolo_hybrid.py-352-           if segment_id:
--
backend\pipeline\segmenters\gemini.py:507:           segment_id =
self.db.add_play_segment(video_id, start, end, None, None, metadata)
C:\Users\avidu\Projects\badminton-highlight-indexer\backend\pipeline\segmenters\gemini.py-508-

```

18. assistant (2026-06-25T17:38:43.918Z)

All claims confirmed. The other segmenters (yolo_hybrid, gemini, trajectory_hybrid) all pass `None, None` for server/receiver, exactly as the finding states.

19. user (2026-06-25T17:38:52.438Z)

Structured output provided successfully

20. assistant (2026-06-25T17:38:58.871Z)

Verified. The finding is real but correctly a NIT requiring no action for this PR.

Key confirmations from the code:

- `backend/api/static/app.js:223` does render `Serve: \${rally.server} ? Receive: \${rally.receiver}`, which becomes `null ? null` when those fields are None.
- The legacy static UI is superseded: `backend/main.py:233-242` serves the bundled SPA (`backend/ui/index.html`, present in this repo) at `/`, with the legacy dashboard as a fallback only when the SPA is absent.
- Not a PR regression: `yolo\_hybrid.py:351`, `gemini.py:507`, and `trajectory\_hybrid.py:464` already pass `None, None`, so this UI already rendered null for those detectors. `motion.py:204` now matches them (docstring at line 194 says so explicitly).

One imprecision in the finding's wording: it says the static dir is "not mounted anywhere in `backend/api/\*.py`" ? literally true, but the mount does exist at `backend/main.py:231` (`app.mount("/static", StaticFiles(...))`), so `/static/app.js` is technically reachable. This doesn't change the verdict ? it's still dead/fallback demo UI, not the served SPA.
