Transcript

1. user (2026-06-25T16:56:32.122Z)

Adversarially verify this PR-review finding for PR #380 (branch o1-p11/gemini-remote-file-gc is checked out; read the real code with `git diff origin/master...HEAD` + Read the files). Be skeptical ? default to `isReal=false` / `adjustedSeverity=INVALID` if the finding is wrong, already handled by the code, or a non-issue. Do NOT re-run CI.

Finding [MEDIUM] Tracked project doc (audit tracker) NOT updated for 01/P11 ? violates the repo's tracked-doc convention

Location: docs/CODE_CLEANUP_AUDIT_2026-06-24.md:199 (and §8.1 #2 at line 239)

Detail: The task explicitly asked to confirm "the audit tracker docs/CODE_CLEANUP_AUDIT_2026-06-24.md updated for 01/P11." It is NOT. The diff stat for this PR is only 3 files (backend/main.py, backend/providers/gemini.py, tests/test_provider_gemini.py); the audit doc is unchanged on this branch (`git diff origin/master...HEAD -- docs/CODE_CLEANUP_AUDIT_2026-06-24.md` is empty). The §6 status tracker row P11 still shows status `?` (unchecked) with PR column `?`, and §8.1 "Next items" #2 still lists 01/P11 as a REMAINING pick-up ("REMAINING: a cleanup-on-startup sweep ... for files left by a crashed previous run"). This is exactly the work this PR ships. Every prior shipped item in the same tracker flips its row to `?` with the PR link (e.g. P8/#373 line 196, P13/#373 line 201, P14/#374 line 202, P17/#378 line 204), and the project's working agreement (CLAUDE.md, working-agreement-tracked-project-docs) requires the tracked project doc's progress tracker to be kept current. The PR body even claims it "Closes the 01/P11 item" and "completes the GC story," so leaving the tracker showing it as open is an honesty/freshness gap. NOTE: per CLAUDE.md's doc-status discipline, the doc should ideally be updated in this same PR rather than a follow-up, since it is the single-purpose tracker for this work item.

Suggested fix: In this PR (or a same-day follow-up if the owner prefers tracker edits separated), flip §6 row P11 to `?` with the PR link in the last column, and in §8.1 strike/mark item #2 (01/P11) as DONE (mirroring how #1/B2-P17 was struck through with "? DONE (this PR)"). Optionally add it to the §255 "already shipped" note.

Return `isReal` + `adjustedSeverity` (INVALID if not real) + one-paragraph reasoning grounded in the actual code.

2. assistant (2026-06-25T16:56:34.845Z)

I'll verify this finding by examining the actual code and the audit tracker document on the PR branch.

3. user (2026-06-25T16:56:36.548Z)

```

---AUDIT DOC DIFF---

---END (empty means unchanged)---

5. assistant (2026-06-25T16:56:40.350Z)

The diff stat and audit doc diff are confirmed. Now let me read the actual audit tracker sections referenced in the finding to verify the P11 row status and §8.1 content.

6. user (2026-06-25T16:56:42.464Z)

206
207 ---
208
209 ## 7. Open questions
210
211 1. **Q: Should D1 (split `main.py`) be Phase 1 or Phase 2?` ? Leaning Phase 2: D2 (app-
factory) is a natural precursor, and D1 is lower risk after the globals are gone. Owner to
confirm.
212 2. ~~Q: Should Phase 1 include enabling `I` (isort) in ruff.toml?~~ ? ? Shipped in
#360.
213
214 ---
215
216 ## 8. Definition of done
217
218 - [x] P0: This doc approved and merged to `master`
219 - [x] P1?P3: Typed-config migration complete ? no `.get()` dict access remains in
backend code; `extra='forbid'` on `AppConfig`
220 - [x] P4: `segmenter_must_be_registered` actually validates against the registry
221 - [x] P5: `create_app()` injects shared state via `app.state` (handlers read
`request.app.state`); `backend.api.job_worker` removed from mypy quarantine. (The Optional
module globals `db_instance`/`global_config` are **retained as a transitional back-compat shim**
and `backend.main` stays mypy-quarantined ? full removal is follow-up, see D1/P10.)
222 - [x] P6: Quick wins Q1?Q6, Q8 landed
223 - [x] P7: Full test suite ? 1463/1463 pass (#371); `ruff` + `mypy` clean;
`backend.api.job_worker` lifted from quarantine
224 - [x] All PRs are single-purpose, branched from `master`, with descriptive commit
messages
225 - [ ] `docs/README.md` updated to reflect the project's terminal state
226 - [ ] Final status flipped to `DONE` and this doc moved to
`docs/archives/past_projects/`
227
228 ---
229
230 ## 8.1 ? Next items ? Phase 2 pick-up (prioritized)
231
232 All items below are **Claude-doable**, small-PR-friendly, and unblocked. Pick up in
order:
233
234 ### Immediate (HIGH impact, low risk)
235
236 | # | ID | What | Why |
237 |---|---|-----|-----|
238 | ~1~ | ~**B2 / P17**~ | ~**Finish** the `Success`/`Failure` return contract~ ?
**? DONE (this PR).** The 3 callers that dropped provider error metrics now surface
`metrics["error"]` loudly. **Follow-up remains:** migrate the hybrid segmenters' `process_video`
return type from bare `List[Dict]` to the ABC's `Result[...]` (`Success`/`Failure`) ? currently
suppressed with `type: ignore[override]` in `trajectory_hybrid.py` (motion.py is already fully
migrated). |
239 | 2 | **O1 / P11** | Gemini remote-file GC | The per-call `_safe_delete` on every
failure/success path is ALREADY in place (`providers/gemini.py`). REMAINING: a cleanup-on-
startup sweep of orphaned files via `client.files.list()` for files left by a crashed previous
run. |
240
241 ### Near-term (MEDIUM impact)
242
243 | # | ID | What | Why |
244 |---|---|-----|-----|
245 | 3 | **B1 / P9** | Remove fabricated data from `motion.py` | Random values for

```

```

`server`/`receiver`/`shot_count`/`events`/`avg_speed_kmh` are persisted as real data. Replace
with `None` or honest `"unknown"` markers. |
246 | 4 | **D13 / P12** | ByteTrack deprecation migration | `sv.ByteTrack` removed in
supervision 0.30.0; pinned `<0.30.0` as stopgap. Migrate to standalone `trackers` package. |
247 | 5 | **D1 / P10** | Split `main.py` god-module | ~1450 lines. D2 (app-factory) was the
necessary precursor ? now done. Extract: CLI handlers ? `backend/cli/`, upload routes ? already
in `backend/api/uploads.py`, debug helpers ? `scripts/`. |
248
249 ### Later (deferred)
250
251 | # | ID | What |
252 |---|---|-----|
253 | 6+ | **P16+** | B4, B7, B8, D5, D6, D8?D10, D14, O3, O4 ? Phase 3 items |
254
255 > **Removed from this list ? already shipped (see the §6 tracker); they were stale
entries left from before Round 3/4 landed:** D4/P13 deep config merge (#373 ?
`loader.py::_deep_merge`), O2/P14 single-executor risk documented (#374 ? `job_worker.py`),
Q7/P15 `motion.py` type-cleaned (#373 ? no longer in the `mypy.ini` quarantine list).
256
257 ---
258
259 ## 9. References
260
261 - **Audit source:** 33 findings from a deep whole-repo read on 2026-06-24, plus 2
absorbed from `docs/BACKLOG.md` (D13, D14) for a total of 35. Two additional BACKLOG items (D2,
O1) were already independently found and are cross-referenced in §3e.
262 - **Prior hardening sweep:** `docs/CODE_AUDIT_AND_TEST_HARDENING.md` (completed
2026-06-14) ? the previous audit-driven hardening round. This project is the next wave.
263 - **BACKLOG.md** `docs/BACKLOG.md` ? deferred items from the 2026-06-10 sweep; §3e maps
the absorbed items.
264 - **CODE_MAP.md** `docs/CODE_MAP.md` ? placement rules, gotchas, and the cross-cutting
footguns list.
265 - **mypy.ini** ? quarantine list and the ratchet instruction.
266 - **ruff.toml** ? lint rules; `"I"` (isort) deferred.
267 - **PROJECT_DOC_TEMPLATE.md** `docs/PROJECT_DOC_TEMPLATE.md` ? the template this doc
follows.

f00b71e feat(O1/P11): Gemini remote-file GC ? startup orphan sweep
---PR BODY via gh---
{"body":"## Summary\n\nCloses the **O1/P11** item from `docs/CODE_CLEANUP_AUDIT_2026-06-24.md` (§3c, §8.1 #2).\n\nA hard process death (SIGKILL/OOM/power loss) between `files.upload()` and `_safe_delete()` orphans the uploaded clip on Google's Gemini File-API servers **forever**. The per-call `_safe_delete` (in place since #373) covers every normal/except path, but can't help when the process is killed mid-flight ? those files accumulate across crashed runs with no cleanup.\n\nThis adds a best-effort **startup sweep** that reclaims orphaned uploads.\n\n## Changes ? pure additions (172 +/0 -)\n\n### `backend/providers/gemini.py`\n- **`GeminiProvider.cleanup_orphaned_files(grace_sec=3600) -> int`** ? lists all remote files via `client.files.list()`, deletes any whose `mime_type` is `video/*` AND whose `create_time` is older than the grace window (so a live worker mid-upload is never raced). Counts only **successful** deletes (calls `files.delete` directly, not `_safe_delete`, so a failed delete is caught and not counted). Swallows per-file and list-level failures ? **never raises, never blocks startup**.\n\n### `backend/main.py`\n- **`_maybe_sweep_gemini_orphans(config)`** ? the startup hook. A strict no-op unless `ai_provider == \"gemini\"` AND `GEMINI_API_KEY` is present. Never raises (a failed sweep is logged + swallowed). Extracted as a standalone function for unit-testability.\n- Wired next to `fail_stale_jobs()` in `main()` ? the existing crash-recovery sweep. This is its natural home: both clean up state left by a previous crashed process.\n\n## Tests ? +6 new (coverage ratchet held)\n\n**GC method (`cleanup_orphaned_files`):**\n1. `test_cleanup_orphaned_files_deletes_stale_videos_only` ? deletes a stale video; leaves fresh videos (grace), non-videos, and timestamp-less files.\n2. `test_cleanup_orphaned_files_list_failure_is_swallowed` ? a `files.list()` failure returns 0, never raises.\n3. `test_cleanup_orphaned_files_per_file_delete_failure_is_swallowed` ? a

```

```
`files.delete()` failure on one file doesn't abort the sweep and isn't counted.\n\n**Startup wiring (`_maybe_sweep_gemini_orphans`):**\n4. `test_maybe_sweep_skips_non_gemini_provider` ? non-Gemini provider ? no client built, no sweep.\n5. `test_maybe_sweep_skips_when_no_api_key` ? no `GEMINI_API_KEY` ? no sweep.\n6. `test_maybe_sweep_runs_and_swallows_errors` ? Gemini + key ? sweep runs; a provider error is swallowed (never blocks startup).\n\n## Safety design\n- **Grace-gated** (`grace_sec=3600`, 1h default): only deletes files older than the window, so a concurrent live worker mid-upload is never raced.\n- **Video-only**: non-video files (images, etc.) are left untouched ? the sweep only reclaims what *we* upload.\n- **No-timestamp = keep**: a file with no `create_time` can't be proven stale, so it's left (safe default).\n- **Never blocks startup**: every failure path (list fail, delete fail, auth fail) is caught + logged at WARNING/DEBUG.\n\n## Ve
```

8. assistant (2026-06-25T16:56:47.445Z)

The finding is fully substantiated. Let me confirm the S3c reference and double-check the line numbers cited, and verify the PR body's claims about what it ships.

9. user (2026-06-25T16:56:50.259Z)

```
1 import argparse
```

10. user (2026-06-25T16:56:51.109Z)

```
+def _maybe_sweep_gemini_orphans(config) -> None:
+    """01/P11: best-effort sweep of Gemini File-API uploads orphaned by a previous crashed run.
+    a failed sweep is logged and swallowed so it can't block startup. Extracted for unit
+    tests."""
+    deleted = provider.cleanup_orphaned_files()
+    logger.info("[STARTUP] Gemini orphan sweep reclaimed %d remote file(s).", deleted)
+    logger.warning("[STARTUP] Gemini orphan sweep skipped (non-fatal): %s", e)
+    # 01/P11: sweep Gemini File-API uploads orphaned by a hard process death (the per-call
+    _maybe_sweep_gemini_orphans(global_config)
```

11. assistant (2026-06-25T16:56:59.409Z)

All facts in the finding are verified against the actual code. I have everything needed to render the verdict.

The finding's factual claims are all confirmed:

- The PR diff is exactly 3 files (`backend/main.py`, `backend/providers/gemini.py`, `tests/test\_provider\_gemini.py`), 172 insertions ? the audit doc is NOT among them.
- `git diff origin/master...HEAD -- docs/CODE\_CLEANUP\_AUDIT\_2026-06-24.md` is empty (doc unchanged on this branch).
- \$6 tracker row P11 (line 199) still shows `?` with PR column `?`: `| \*\*P11\*\* | \*\*01: Gemini remote-file GC\*\* ... | P7 | No | ? | ? |`.
- \$8.1 item #2 (line 239) still lists 01/P11 as a REMAINING pick-up: "REMAINING: a cleanup-on-startup sweep of orphaned files via `client.files.list()` for files left by a crashed previous run."
- The PR ships exactly that: `cleanup\_orphaned\_files()` + `\_maybe\_sweep\_gemini\_orphans()` startup sweep, with the code comments themselves citing "01/P11".
- The PR body explicitly states `Closes the \*\*01/P11\*\* item`.
- The convention is well-established: every prior shipped row flips to `?` with a PR link (P8/#373 line 196, P13/#373 line 201, P14/#374 line 202, P17/#378 line 204), and \$8.1 #1 (B2/P17) was struck through with "? DONE (this PR)".

12. user (2026-06-25T16:57:07.442Z)

Structured output provided successfully

13. assistant (2026-06-25T16:57:09.899Z)

The finding is verified as real and correctly scoped at MEDIUM severity. All factual claims check out against the actual branch code, and the violation of the repo's tracked-doc convention is well-established. Verdict returned via StructuredOutput.
