ADVERSARIAL VERIFIER. A reviewer of the P23 main.py->orchestration.py extraction claims:

TITLE: caplog tests pin logger="backend.main" but the asserted warnings now come from logger "backend.orchestration"
SEVERITY: nit
DETAIL: tests/test_api_cloud_dispatch.py:311 and :444 use caplog.at_level("WARNING", logger="backend.main") and then assert on warnings that the extraction moved into backend/orchestration.py (the 'cloud video_id %s != local' warning at orchestration.py:286 and the 'ignoring unknown compute' warning at orchestration.py:209), which are now emitted under logger name "backend.orchestration". The tests still pass (I ran both: 2 passed) only because pytest's caplog handler captures at the root logger regardless of the logger= argument, and root is at INFO via main.py's basicConfig. The logger= pin is now vestigial and brittle ? if these tests ever tighten to filter records by record.name == "backend.main", or if root level handling changes, they break silently-later rather than here. Not a merge blocker; worth a one-line test fix (point at "backend.orchestration" or drop the logger= arg). Related cosmetic delta: server log lines for these messages change %(name)s from backend.main to backend.orchestration.
EVIDENCE: tests/test_api_cloud_dispatch.py:311, tests/test_api_cloud_dispatch.py:444; backend/orchestration.py:209, backend/orchestration.py:286 (verified: both tests pass in the worktree)

REFACTOR UNDER REVIEW (uncommitted, in worktree C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-highlight-indexer/accd47af-95a3-46a7-9b51-b3eb5066a777/scratchpad/wt-docs, branch refactor/p23-orchestration-split off origin/master):

```
- NEW backend/orchestration.py (739 lines): 10 members moved VERBATIM from backend/main.py:  
  _finalize_reingest, _report_config_for_input, _ingest_remote_segments, _cloud_available,  
  _maybe_dispatch_remote, _execute_processing, _remote_input_size_bytes, _CompileError,  
  _resolve_compile, _execute_compile.  
- backend/main.py 2360 -> 1703 lines; re-exports all 10 names via "from backend.orchestration  
import (...)" (noqa F401);  
  5 now-unused imports removed (csv, math, Tuple, StitchingConfig, localize_watermark).  
- Enumerated intentional deltas (everything else is AST-identical, machine-verified):  
  (1) _maybe_dispatch_remote: "req: ProcessRequest" -> string forward-ref "ProcessRequest"  
  (TYPE_CHECKING import).  
  (2) _execute_processing: inserted "import backend.main as _main" after docstring;  
  global_config/db_instance/  
  ProcessRequest resolved via _main.<name> at call time (the job_worker seam convention).  
  (3) two "# type: ignore[...]" comments (AST-invisible).  
- NEW tests/test_main_module_budget.py: line budget 1750, route ceiling 18, re-export identity  
check.  
- Verified already: AST-identity (10 moved + 51 retained members), ruff+format clean, mypy green  
(142 files),  
  ratchet test passes. Full suite running separately.
```

Inspect with: `git -C "C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-highlight-indexer/accd47af-95a3-46a7-9b51-b3eb5066a777/scratchpad/wt-docs" diff` (and `git -C "C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-highlight-indexer/accd47af-95a3-46a7-9b51-b3eb5066a777/scratchpad/wt-docs" status`); the new files are untracked/modified in the worktree.

READ-ONLY: do not modify the worktree, do not checkout/commit.

Independently verify in the worktree (READ-ONLY). Default skeptical: `real=true` ONLY if you can reproduce the evidence AND the failure scenario is concrete (a test that would fail, a runtime path that breaks, an operational regression). A theoretical concern with no concrete consumer = `real=false`.
