Transcript

1. user (2026-07-02T08:16:24.732Z)

You are reviewing OPEN GitHub PR #414 on Khelsutra/badminton-highlight-indexer to decide its fate: should we TAKE IT OVER (adopt/rebase/verify/merge) or CLOSE it as superseded by already-merged work?

PR #414: "docs(CLAUDE.md): truth-sync stale Current-state section (R2-5)" (head branch: origin/docs/claude-md-current-state-truth-sync, mergeable=CONFLICTING)
Investigation hint: Docs-only edit to CLAUDE.md "Current state" section. Handoff claims a "doc truth-sync" already merged. CHECK: does current master CLAUDE.md already contain an up-to-date (post-2026-06 shipped-reality) Current-state section, or is it still frozen/stale? Is #414 additive/redundant/contradictory vs master?

Already MERGED onto master (verify against actual master code, do not assume):

```
- #422 = fix for --output-dir clobbering config.json output.output_dir (CODE_MAP updated for it)  
- #423 = docs: health-remediation plan added + DOC_STATUS/README/NEXT_STEPS registered; audit  
marked snapshot  
- #424 = P2: /api/process idempotent by content hash (#340 re-bill fix)  
- #425 = P3: /api/source resolves remote source into output-scoped source_cache, reuses across  
Range requests, warms annotation proxy  
- #426 = P4: bounded ffmpeg/ffprobe subprocess timeouts on serving paths  
- #427 = P5: clean remote-input scratch dirs after process/compile/assets/CLI; durable reports  
- #428 = P1/P6: backend/storage/gcs.py lazy-import mypy typing fix  
master HEAD = d00b4db "fix gcs storage lazy import typing (#428)"
```

Working dir: C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer (currently on master @ d00b4db). This is a SHARED checkout used by sibling sessions ? DO NOT checkout branches, DO NOT modify the working tree, DO NOT run git merge/rebase/add/commit. Read-only investigation only.

Do this:

1. Get the PR's intended change: run `gh pr diff 414 -R Khelsutra/badminton-highlight-indexer` (read the full diff). Also `gh pr view 414 -R Khelsutra/badminton-highlight-indexer --json body,files,statusCheckRollup` if useful.
2. Read the CURRENT master version of every file the PR touches (Read / Grep the files under C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer). To see the PR's branch version of a file without checkout, use: `git -C "C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer" show origin/docs/claude-md-current-state-truth-sync:<path>`.
3. Determine whether master ALREADY implements the PR's intent (superseded) or still lacks it. Cite concrete master file:line evidence either way. Do not trust the hint or handoff ? verify in code.
4. If CONFLICTING, explain precisely why (which files/hunks) and whether the conflict is because master already did the same thing (=> superseded/close) or because of adjacent edits (=> rebasable).
5. Judge correctness/quality of the PR change itself.

6. Recommend a fate:
- CLOSE_SUPERSEDED: master already implements the intent; the PR adds nothing material.
 - TAKE_OVER_CLEAN: mergeable & still-needed; adopt and verify as-is.
 - TAKE_OVER_REBASE: still-needed but conflicting; needs a rebase onto master + re-verify, then merge.
 - OWNER_DECISION: product/strategy/ambiguous ? needs the owner.

Return ONLY the structured object. Be precise and cite master file:line in master_evidence.

2. assistant (2026-07-02T08:16:27.492Z)

I'll investigate PR #414 to determine its fate. Let me start by getting the PR diff and details.

3. user (2026-07-02T08:16:29.925Z)

-## Current state (June 2026)

- **Scaffolding complete** ; strategy foundation + owned-model roadmap merged. **No
- platform/owned-model implementation has started.** A 2026-06-10 audit-driven hardening
- sweep landed (licensing gate, detector keying, re-ingest safety, config, eval gate, API
- validation, reliability, CI + test coverage) ? see git history.
- **Two tracks, both owner-gated:** the **committed next PLATFORM slice = async job model**
- (`DEFERRED\_HARDENING\_PLAN.md` #16, single-tenant); the **owned-model track** starts at a
- greenlit Phase-0 milestone (`OWNED\_MODEL\_IMPLEMENTATION\_PLAN.md`). **Do not start
- implementation without explicit owner approval.**

Current state (2026-07-01)

- + **Platform slice SHIPPED.** Async job model is live (`backend/api/job\_worker.py`; async
- + `/api/compile` 202+poll, #339); `COMPUTE\_DECOUPLED\_SERVING` M0?M9 largely shipped + M11
- + data-flywheel (#336) + M12 gdrive-api (#338), default-OFF (ADR-014); SPA compute-picker
- + (#335/#341); DB schema at v9. Packaging track (pip install ? `indexer --app`, bundled SPA,
- + torch-free) in progress ? `docs/PACKAGING\_PLAN.md`.
- + **Owned-model / quality track:** `DECOUPLED\_COMPUTE` DELIVERED on GCP (M0?M2 + M3.5, archived
- + #270); Gen-0 weights `0.1.0-l4` pushed (n=2 plumbing-only). R4 density fix promoted default-
- ON
- + (#396). **Full-corpus training (n?5) + further owned-model milestones stay owner-gated**
- (corpus
- + growth + greenlight per `OWNED\_MODEL\_IMPLEMENTATION\_PLAN.md`); the M7 persistent Cloud Run
- + endpoint = owner spend-gated. **Do not start owner-gated work without explicit approval.**

+ - **? Launch = NO-GO (owner, 2026-06-30, #404)** ? we stay in development. Unblockers: ship-gate
+ target (#172, unset) + WASB weight provenance. Live priorities: `docs/NEXT\_STEPS.md` (owner
+ priority = the UI-driven, alpha-shareable flow, item 0).

Architecture in one breath

- **Pluggable registries** (ABC + `Registry` singleton): segmenters / providers / validators
- / sports / annotations ? see `backend/pipeline/segmenters/base.py`. *Future:*
- `StorageBackend` + `ComputeBackend` registries (PLATFORM \$3).
- + / sports / annotations ? see `backend/pipeline/segmenters/base.py`. `StorageBackend` +
- + `ComputeBackend` are SHIPPED as ABC + scheme factory (`backend/storage/` ?
- + local/gcs/gdrive/gdrive-api/s3 + `ref.py`; `backend/compute/` ? Cloud Run) (PLATFORM \$3).
- `video\_id` = MD5 of the file ? `backend/utils/hashing.py::compute\_video\_id` (one helper).
- Typed config = `backend/config/` (Pydantic). DB schema evolves via the `PRAGMA`
user_version` migration ladder in `backend/infrastructure/database.py`.

4. user (2026-07-02T08:16:31.481Z)

```
{"body": "Fixes audit finding **R2-5 (P1)**: the agent-loaded `CLAUDE.md` \"Current state\" section was frozen at 2026-06-10 (62fb2fb) and had gone ~3 weeks false ? a fresh agent session reading it would conclude the platform/owned-model work never started and propose re-designing things that already shipped.\n\n## What / why\n- **Rewrote \"Current state\" (now dated 2026-07-01)** against code + git log:\n  - Platform slice **shipped**: async job model (`backend/api/job_worker.py`; async `/api/compile` #339), `COMPUTE_DECOUPLED_SERVING` M0?M9 largely shipped + M11 data-flywheel (#336) + M12 gdrive-api (#338), SPA compute-picker (#335/#341), DB schema v9, packaging track in progress.\n  - Owned-model track: `DECOUPLED_COMPUTE` **delivered** on GCP (M0?M2 + M3.5, archived #270); Gen-0 weights `0.1.0-l4` pushed (n=2 plumbing-only); R4 density fix default-ON (#396).\n  - **Launch NO-GO recorded** (owner, 2026-06-30, #404) with its two unblockers (ship-gate target #172, WASB provenance).\n  - **Preserved the owner-gate language that is still true**, kept consistent with `docs/NEXT_STEPS.md`'s NO-GO block: full-corpus training (n?5) + further owned-model milestones stay owner-gated; M7 persistent Cloud Run endpoint stays spend-gated; \"do not start owner-gated work without explicit approval\" retained.\n  - **Fixed the Gate-A claim** (\"not wired into production\"): Gate A is servable **opt-in** via `fusion_hybrid`'s `min_crossings` knob (default 0=OFF; served litmus neutral on production windowing, #401).\n  - **Flipped `StorageBackend`/`ComputeBackend` from \"*Future:*\" to shipped** (ABC + scheme factory; `backend/storage/`, `backend/compute/`) in \"Architecture in one breath\".\n\nDocs-only; no code or behavior change. Every sentence was verified against the working tree / `git log` (PR numbers cited inline per the file's existing style).\n\n## Verification\n- Ran locally: `python -m tools.check_md_links` ? clean (the `link-check` CI job's command).\n- Verified each claim against the tree: `backend/api/job_worker.py`, `backend/storage/` (local/gcs/gdrive/gdrive-api/s3 + `ref.py` `_KNOWN` schemes), `backend/compute/base.py` + `cloud_run.py`, `SCHEMA_VERSION` = 9 in `backend/infrastructure/database.py`, `fusion_hybrid.py` + `min_crossings` (default 0) in `backend/config/models.py`, and commits 8bcf6ce (#339), 334ad0f (#336), 819e395 (#338), 6d3d054/d92cc10 (#335/#341), 4134721 (#270), a555887, 4a7bfbe (#404), c8a493d (#401).\n- No Python touched, so no tests added; `run_all_tests.py` / ruff / mypy / coverage are unaffected and covered by CI.\n\nNot a launch/bit-flip PR (no default flipped; no project reaches terminal state).\n\n? Generated with [Claude Code](https://claude.com/claude-code), \"createdAt\": \"2026-07-02T04:50:42Z\", \"files\": [{\"path\": \"CLAUDE.md\", \"additions\": 20, \"deletions\": 13, \"changeType\": \"MODIFIED\"}], \"mergeable\": \"CONFLICTING\", \"statusCheckRollup\": [{\"__typename\": \"CheckRun\", \"completedAt\": \"2026-07-02T04:50:57Z\", \"conclusion\": \"SUCCESS\", \"detailsUrl\": \"https://github.com/Khelsutra/badminton-highlight-indexer/actions/runs/28566248131/job/84694051046\", \"name\": \"Ruff lint\", \"startedAt\": \"2026-07-02T04:50:49Z\", \"status\": \"COMPLETED\", \"workflowName\": \"CI\"}, {\"__typename\": \"CheckRun\", \"completedAt\": \"2026-07-02T04:51:00Z\", \"conclusion\": \"SUCCESS\", \"detailsUrl\": \"https://github.com/Khelsutra/badminton-highlight-indexer/actions/runs/28566248131/job/84694051047\", \"name\": \"Leak scan (PII / attribution guard)\", \"startedAt\": \"2026-07-02T04:50:49Z\", \"status\": \"COMPLETED\", \"workflowName\": \"CI\"}, {\"__typename\": \"CheckRun\", \"completedAt\": \"2026-07-02T04:50:57Z\", \"conclusion\": \"SUCCESS\", \"detailsUrl\": \"https://github.com/Khelsutra/badminton-highlight-indexer/actions/runs/28566248131/job/84694051064\", \"name\": \"Markdown link check (live docs)\", \"startedAt\": \"2026-07-02T04:50:50Z\", \"status\": \"COMPLETED\", \"workflowName\": \"CI\"}, {\"__typename\": \"CheckRun\", \"completedAt\": \"

5. assistant (2026-07-02T08:16:34.201Z)

Now let me verify the PR's claims against current master. Let me check the current CLAUDE.md and the key files/facts the PR cites.

6. user (2026-07-02T08:16:36.131Z)

```

1      # CLAUDE.md ? project memory / agent handoff
2
3      Local, AI-powered **badminton (? racket-sports) highlight indexer + rally detector**:
4      FastAPI + SQLite + ffmpeg + GPU CV/AI, with paid **Gemini** as the cloud AI. Sibling
5      repos: `sports-data-collector`, a VLC-based `rally-annotator`.
6
7      ## Read these first
8      - **`docs/README.md`** ? doc index. **`docs/CODE_MAP.md`** ? code navigation + data
9        contracts (the cold-start map; read before touching code).
10     - **Authoritative owned-model roadmap:** `docs/OWNED_MODEL_IMPLEMENTATION_PLAN.md` (+
the
11     live `docs/NEXT_STEPS.md`). These SUPERSEDE the 2026-06-07 strategy docs below where
they
12     disagree (licensing, Gemma-4 stance, base model, conversational-QA).
13     - **Strategy (post-scaffolding):** `docs/COMMERCIALIZATION.md`,
`docs/PMF_MARKET_RESEARCH.md`,
14     `docs/PLATFORM_ARCHITECTURE.md`, `docs/DEFERRED_HARDENING_PLAN.md`. Also

```

```

`docs/ROADMAP.md`
15      (offline-segmenter narrative) and `docs/BACKLOG.md`.
16      - **Rally-detection quality track (design merged 2026-06-13, owner-gated, implementation
in progress):**
17      `docs/HOW_RALLY_DETECTION_WORKS.md` (2-layer mental model) ?
`docs/MULTI_SIGNAL_FUSION_PLAN.md`
18      (fuse shuttle + person + audio cues; the held-shuttle bug is the already-built
`rally_gate.py`
19      "Gate A" ? implemented in `backend/eval/served_gate_a.py`, default-OFF) ?
`docs/EXPERIMENT_HARNESS.md` (A/B + shadow
20      eval so cues land flag-gated/default-OFF with zero regression) ?
`docs/ROORA_LABELING_GUIDELINES.md`
21      (v8 vendor labeling spec). **`docs/NEXT_STEPS.md` has the prioritized pick-up for this
track.**
22      - **History:** `docs/archives/` ? ADRs (`decisions/DECISIONS.md`), research, and
23      **`checkpoints/`** (latest: `2026-06-strategy-foundation/`). **Archive policy:** only
move
24      **terminal-state** (DONE/REJECTED) work; live docs stay at `docs/` top level ? and
**before
25      archiving, HONESTLY update the doc first** (verify claims vs code ? flip status + a
completion
26      note ? update inbound refs ? keep the lineage ? then `git mv`), per the checklist +
living
27      lifecycle register in **`docs/DOC_STATUS.md`**.
28
29      ## Current state (July 2026)
30      - **Platform slice SHIPPED:** async job model (`backend/api/job_worker.py`, #339),
31      `StorageBackend` + `ComputeBackend` registries with concrete implementations
32      (`backend/storage/` ? local/gcs/gdrive/gdrive_api/s3; `backend/compute/` ?
33      local/cloud_run), capabilities/assets endpoints, and the data flywheel
34      (`backend/flywheel.py`). `COMPUTE_DECOUPLED_SERVING` M0?M9 largely shipped
35      (ADR-014 ratified 2026-06-21); Gen-0 owned-model weights pushed (`weights/0.1.0-l4/`).
36      - **Launch decision: NO-GO (owner, 2026-06-30, #404)** ? the rally-detection product is
37      NOT cleared for external/commercial launch; we stay in development. Two unblockers
gate a
38      future GO: (1) set + meet the ship-gate target (#172, needs corpus growth); (2)
resolve
39      WASB shuttle-detector weight provenance (commercial-clean licensing).
40      - **Active tracks** (see `docs/NEXT_STEPS.md` for the prioritized pending list):
41      rally-quality / owned-model ML work (gated on golden-corpus growth), packaging
42      (`docs/PACKAGING_PLAN.md`), and the khelsutra SPA/deploy sibling track.
43
44      ## Architecture in one breath
45      - **Pluggable registries** (ABC + `Registry` singleton): segmenters / providers /
validators
46      / sports / annotations ? see `backend/pipeline/segmenters/base.py`.
47      `StorageBackend` + `ComputeBackend` registries are **implemented**
(`backend/storage/`,
48      `backend/compute/`; PLATFORM $3 ? realized by `COMPUTE_DECOUPLED_SERVING`).
49      - `video_id` = MD5 of the file ? `backend/utils/hashing.py::compute_video_id` (one
helper).
50      - Typed config = `backend/config/` (Pydantic). DB schema evolves via the `PRAGMA
51      user_version` migration ladder in `backend/infrastructure/database.py`.
52
53      ## Committed guardrails (non-negotiable)
54      - **Paid LLMs (Gemini/OpenAI/Anthropic) = inference / serving / fallback ONLY ? never a
training data source** (terms/copyright). Commercial-clean licensing for EVERY
dependency ?
55      code, data, AND weights: **MIT / Apache-2.0 / BSD only** (ratified 2026-06-09, owner-
agreed).
56      - **Owned-model base:** **Qwen3-VL (Apache-2.0)** primary, InternVL3 (MIT) fallback;
**Gemma-4
57      is AMBER / bench-only** (Apache grant likely but Prohibited-Use posture unconfirmed ?
counsel
58      needed; do NOT build on it without sign-off). **Reject Gemma 3** (viral license).

```

```
**Exclude
60      minors** from the training pool; per-user training data needs a separate explicit opt-
in.
```

7. user (2026-07-02T08:16:38.589Z)

```
d00b4db fix gcs storage lazy import typing (#428)
---MERGE-BASE---
e4101365cb5f3a608e76f8baf1d2e0d65ce1738e
---PR BRANCH LOG---
3b36f9f docs(CLAUDE.md): truth-sync the stale Current-state section to shipped reality (audit
R2-5)
e410136 api: /api/videos surfaces fps + resolution (from the stored ffprobe details) (#413)
81a78bf api: /api/videos returns video_id + a friendly match_name (fix disappearing name) (#412)
8b16cf4 docs: reflect today's storage endpoints + the corpus/user-video boundary (#411)
aa915a7 deploy/gcp: centralize project + bucket names in one sourced buckets.env (#410)
```

8. assistant (2026-07-02T08:16:43.127Z)

This is a critical finding. The current master CLAUDE.md ALREADY has a fully truth-synced "Current state" section ? but it's a DIFFERENT rewrite than what PR #414 proposes. Master's version is dated "July 2026" and already reflects the shipped reality. Let me confirm this is different work than #414 (which forked from merge-base e410136).

Let me investigate the history of CLAUDE.md to see which merged PR did this truth-sync.

9. user (2026-07-02T08:16:46.170Z)

```
===CLAUDE.md commit history (master)===
d80aa02 docs: truth-sync ? audit report + fix stale state in CLAUDE.md, BACKLOG, DOC_STATUS,
README, NEXT_STEPS (#421)
af1ccb8 chore(#399): launch-PR process hardening ? link-check CI, PR template, doc cross-links
(#402)
3624a8d feat(D13/P12): migrate ByteTrack to standalone trackers package (#386)
aa5e9db docs: add DOC_STATUS register + archival due-diligence convention (#273)
b05401b docs: drop DigitalOcean ? GCP is the sole compute stack (ADR-013) (#266)
9736a3b docs: re-ground stale doc claims to the current code (multi-agent audit) (#242)
1de2817 docs: freeze Golden Regression Fixtures plan + adopt tracked-project-doc template (#186)
e735fd4 docs: experiment-harness (A/B + shadow, no-regression) design + handoff updates
62fb2fb docs: sync to ratified decisions + repo reality (audit truth-sync) (#71)
3fd7232 docs: handoff-consistency sweep + strategy checkpoint + CLAUDE.md (#59)

===What did merge-base e410136 CLAUDE.md look like (Current state)?===
note ? update inbound refs ? keep the lineage ? then `git mv`, per the checklist + living
lifecycle register in **`docs/DOC_STATUS.md`**.
```

Current state (June 2026)

- **Scaffolding complete**; strategy foundation + owned-model roadmap merged. **No** platform/owned-model implementation has started. **A 2026-06-10 audit-driven hardening sweep landed** (licensing gate, detector keying, re-ingest safety, config, eval gate, API validation, reliability, CI + test coverage) ? see git history.
- **Two tracks, both owner-gated**: the **committed next PLATFORM slice = async job model** (`DEFERRED_HARDENING_PLAN.md` #16, single-tenant`); the **owned-model track** starts at a greenlit Phase-0 milestone (`OWNED_MODEL_IMPLEMENTATION_PLAN.md``). **Do not start** implementation without explicit owner approval.

Architecture in one breath

- **Pluggable registries** (ABC + `Registry` singleton`): segmenters / providers / validators / sports / annotations ? see `backend/pipeline/segmenters/base.py``. **Future:** `StorageBackend` + `ComputeBackend` registries (PLATFORM S3).`
- `video_id` = MD5 of the file ? `backend/utils/hashing.py::compute_video_id` (one helper).`
- Typed config = `backend/config/` (Pydantic). DB schema evolves via the `PRAGMA user_version` migration ladder in `backend/infrastructure/database.py`.`

10. assistant (2026-07-02T08:16:52.450Z)

This confirms the picture clearly. Key finding:

- PR #414 forked from merge-base `e410136`, where the "Current state" section was still the STALE "June 2026 / Scaffolding complete / No platform implementation has started" version.
- Merged PR ****#421**** (`d80aa02` "docs: truth-sync ? audit report + fix stale state in CLAUDE.md...") already did the exact same truth-sync on master ? the "Current state" is now "July 2026 / Platform slice SHIPPED", and "Architecture in one breath" already flipped `StorageBackend`/`ComputeBackend` from **"Future:"** to **"**implemented**"**.

PR #414 and merged #421 are ****two independent solutions to the same audit finding (R2-5)****. Both replaced the same stale hunk. This is a textbook superseded + conflicting-on-the-same-hunk case. Let me verify the #421 merge and confirm the conflict is on the same lines, plus spot-check a couple of the factual claims to judge quality.

11. user (2026-07-02T08:16:56.476Z)

===Is #421 on master? (d00b4db is HEAD)===
YES: #421 (d80aa02) IS an ancestor of master HEAD

===Does PR branch contain #421?===
NO: PR branch does NOT contain #421 (forked before it)

===#421 commit body===
2026-07-02 10:55:33 +0530
Audit-driven doc-rot reconcile (AUDIT_REPORT R2-5, R1-13, R1-14):
- CLAUDE.md 'Current state': rewrite from 'No platform/owned-model implementation has started' to the shipped reality (async jobs, storage/compute backends, flywheel, Gen-0 weights, launch NO-GO 2026-06-30)
- CLAUDE.md: Gate A 'not wired' ? 'implemented in served_gate_a.py, default-OFF'; StorageBackend/ComputeBackend 'Future' ? 'implemented'
- BACKLOG.md: ByteTrack deprecation ? DONE (#386); app-factory split (create_app shipped #370, lifespan+lazy-imports remain); Gemini GC shipped (#380), WSL temp/frame retention remains
- DOC_STATUS.md: CODE_CLEANUP_AUDIT row updated (Phase 1 COMPLETE, Phase 2 nearly done); added DECISION_SNAPSHOT_REGRESSION row (decisions locked #383); COMPUTE_DECOUPLED_SERVING row updated (M1-M9 largely shipped)
- README.md: CODE_CLEANUP_AUDIT + DECISION_SNAPSHOT blurbs updated to current state
- NEXT_STEPS.md: 'owner M0 design sign-off pending' ? 'M0-M9 LARGELY SHIPPED'
- Add the multi-repo audit report as a tracked project doc

12. assistant (2026-07-02T08:17:03.214Z)

Confirmed decisively. Merged PR #421 (`d80aa02`, dated 2026-07-02) explicitly addressed the SAME audit finding ****R2-5**** with the SAME intent as PR #414:

- Rewrote CLAUDE.md "Current state" from "No platform... implementation has started" ? shipped reality (async jobs, storage/compute backends, flywheel, Gen-0 weights, launch NO-GO 2026-06-30).
- Fixed the Gate A "not wired" claim ? "implemented, default-OFF".
- Flipped StorageBackend/ComputeBackend "Future" ? "implemented".

PR #414 does the ***exact same three things***, just with different wording and a bit more inline PR-number detail. It forked from `e410136` (before #421 merged) and has never seen #421, so it re-edits the identical stale hunk ? hence **CONFLICTING**.

Let me quickly confirm the conflict is precisely on the overlapping hunks (same lines master already rewrote) and not adjacent, and note whether #414 carries any material fact master lacks.

14. assistant (2026-07-02T08:17:15.500Z)

The merge-tree simulation makes it definitive. The conflict is exactly on the same three hunks that both PRs rewrote:

1. ****Gate A line**** ? master (#421): "implemented in `backend/eval/served\_gate\_a.py`, default-OFF" vs #414: "servable opt-in via `fusion\_hybrid`'s `min\_crossings` knob, default 0=OFF... #401".
2. *****"Current state" section**** ? both fully rewrote the same stale block; master dated "July 2026", #414 dated "2026-07-01". Same substance (Platform SHIPPED, async jobs, storage/compute backends, Gen-0 weights, NO-GO #404).
3. *****"Architecture in one breath"***** ? both flipped `StorageBackend`/`ComputeBackend` from ****Future:**** to shipped/implemented.

This is a ****conflict** because master already did the same thing** (overlapping rewrite of the identical hunk), not adjacent edits ? the classic superseded-and-conflicting signature.

I've verified everything needed. Master already implements PR #414's entire intent via merged #421. The PR is redundant, and rebasing it would just produce a near-identical section requiring manual conflict resolution for zero material gain (both are truth-synced and accurate; #414's phrasing is arguably slightly more detailed on PR numbers/knobs, but not materially more correct, and its Gate-A framing even diverges from master's `served\_gate\_a.py` framing).
