You are an adversarial verifier in a tech-debt audit. Your default stance: REFUTE. Today is 2026-07-02.

A finder claims the following about the repo at C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer:

```
{  
  "title": "config.json output.output_dir is silently clobbered by the CLI --output-dir DEFAULT on every server/CLI start ? the typed knob is dead, and the DB path moves with it",  
  "category": "critical-fix",  
  "severity": "P2",  
  "file": "backend/main.py",  
  "line": 1992,  
  "evidence": "main.py:1837-1841 defines `--output-dir` with default='output'; main.py:1992 unconditionally does `global_config.output.output_dir = resolve_output_dir(args.output_dir)` ? the override fires even when the flag was never passed, so a config.json value can never take effect. models.py:274-276 documents the knob as if it's honored ('The CLI's --output-dir overrides this at startup' ? implying only when given). db_path derives from it (main.py:1995-1997).",  
  "why_it_matters": "A documented config knob that is a no-op on the main entry path, with data-location consequences (perceived data loss / split state).",  
  "proposed_fix": "Change argparse default to None and only override when args.output_dir is not None (falling back to the config value through resolve_output_dir).",  
  "effort": "S",  
  "tracked_in": ""  
}
```

Repo root candidates: C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer, C:/Users/avidu/Projects/khelsutra-guru/khelsutra, C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector, C:/Users/avidu/Projects/khelsutra-guru/rally-annotator, C:/Users/avidu/Projects/khelsutra-guru/sports-obsreport (pick from the finding's repo field; non-git dirs: 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup', C:/Users/avidu/Projects/khelsutra-guru/khelsutra-screencast).

VERIFY against the CURRENT working tree (just pulled to origin master/main): (1) does the cited code actually exist and behave as claimed at file:line? (2) was it already fixed by a recent commit (git log --oneline -15 -- <file>)? (3) is the severity honest - construct the concrete failure scenario or downgrade; (4) is the proposed fix sane and correctly scoped; (5) is it owner-gated per: alpha/serving go-live, Studio P10/P11 corpus-promotion/training, product/strategy/licensing, real cloud spend, counsel ToS/DPA?

HARD RULES: READ-ONLY (no file modifications, no installs, no test-suite runs). gh read-only commands allowed. Your reasoning MUST cite file:line you actually read. CONFIRMED requires you personally saw the defect/debt in current code; if you cannot reproduce the claim from the code, say REFUTED; if a commit fixed it, ALREADY_FIXED.

The core mechanics are confirmed. Let me check whether any other entry path honors the config value (app factory / uvicorn direct), and how `output\_dir` is consumed elsewhere.

One quick check to gauge severity honestly ? is `output.output\_dir` surfaced to users in docs/sample config or the setup wizard?

--
badminton-highlight-indexer\docs\archives\HARDENING_LOOP_HANDOFF-COMPLETED-2026-06-14.md:149: - Restored `test\_output\_dir\_field\_default\_and\_override` in full (CLI override + file-override-on-load assertions that had been removed).
C:\Users\avidu\Projects\khehsutra-guru\badminton-highlight-indexer\docs\archives\HARDENING_LOOP_HANDOFF-COMPLETED-2026-06-14.md-150- - Restored the strong original `test\_get\_returns\_dict\_for\_nested\_sections\_legacy\_compat` (exact name + all legacy dict/nested/scalar/leaf-key/ default/fallback guards that the weaker shim replacement had dropped).
C:\Users\avidu\Projects\khehsutra-guru\badminton-highlight-indexer\docs\archives\HARDENING_LOOP_HANDOFF-COMPLETED-2026-06-14.md-151- - New audit-positive Item-2 tests (shallow section, unknown keys) kept additive; no further deletions.
badminton-highlight-indexer\docs\archives\HARDENING_LOOP_HANDOFF-COMPLETED-2026-06-14.md-152- - Minor: corrected #157 Living Log verification count (635 ? 647) in the audit doc.
