1. user (2026-07-02T03:16:59.071Z)

You are an adversarial verifier in a tech-debt audit of the multi-repo workspace at C:/Users/avidu/Projects/khelsutra-guru (repos: badminton-highlight-indexer, khelsutra, sports-data-collector, rally-annotator, sports-obsreport; non-git dirs 'Annotation Setup', khelsutra-screencast). Today is 2026-07-02. All repos are at origin head.
Default stance: REFUTE. A round-1 finder claimed (UNVERIFIED):
REPO: non-git
CLAIM: Roora vendor pilot record (paid deliverables + corrected golden labels + 3 videos) is a single unversioned local copy at risk of loss
INVESTIGATION HINTS: Inspect 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup' read-only: find the Roora pilot artifacts, sizes/dates; cross-check the engine docs/DATA_IN_GCS.md and gs:// archive conventions + docs/archives/roora-vendor/ for whether copies exist elsewhere (Drive/GCS).
VERIFY against the CURRENT working tree: (1) reproduce the defect/debt from actual code at file:line; (2) check git log for a fix that already landed; (3) construct the concrete failure scenario or downgrade severity; (4) propose the correctly-scoped fix with effort S/M/L; (5) flag OWNER_GATED if it needs owner decisions (real cloud spend, product/strategy, counsel, Cloudflare dashboard).
HARD RULES: READ-ONLY ? no file modifications, no installs (pip download/index checks and WebFetch to pypi.org are OK), no test-suite runs. gh read-only OK. sqlite reads OK. CONFIRMED requires you personally observed the defect in current code/data; cite file:line for every claim.

1      # Data in GCS ? the corpus source-of-truth map
2
3      > **Scope:** this map covers the **training corpus only** (`gs://khelsutra-rally-
corpus`). **User-uploaded
4      > videos are a SEPARATE, already-shipped surface** ? `POST /api/assets` + the per-
request `medium_uri` +
5      > `GET /api/capabilities.storage` (see `khelsutra/docs/STUDIO_MEDIA_LIFECYCLE.md`) ? and
must stay physically
6      > isolated from the corpus bucket (the **D1** compliance boundary: consent / no-minors /
not-training holds at
7      > the storage layer). The deploy layer's bucket names now live in one place
(`deploy/gcp/buckets.env`).
8
9      **Status:** LIVE / in-progress (migration not complete). **Owner-gated** decisions in
§7.
10     **Last inventoried:** 2026-06-22 against `gs://khelsutra-rally-corpus`.
11     **Goal (owner, 2026-06-22):** run **all** training + inference from the cloud with **all
data in GCS**,
12     so the local Windows box (and the intermittently-mounted external drive) is **no longer
a blocker**.
13
14     > **? Other sessions: this is where the data lives.** Pull from `gs://khelsutra-rally-
corpus`, not
15     > from anyone's `C:` / `F:` / Google Drive. If something you need isn't in the bucket
yet, it's in the
16     > **gap table (§5)** ? flag it / migrate it, don't hard-code a local path.
```

```

17
18     This doc is the **data map**. The *machine* runbooks are
19     [SETUP_NEW_MACHINE.md](SETUP_NEW_MACHINE.md)
20     (spin up a box) and [deploy/gcp/README.md](../deploy/gcp/README.md) (provision GPU +
21     train/infer).
22     The cloud engine itself was built by the (archived) DECOUPLED_COMPUTE project
23     (docs/archives/past_projects/DECOUPLED_COMPUTE/`); this doc does **not** redesign it ?
24     it records
25     *where the bytes are* and *what's still missing*.
26     ---
27
28     ## 1. The bucket
29
30     | | |
31     |---|---|
32     | Bucket | **gs://khelsutra-rally-corpus** (single corpus bucket) |
33     | Project | gen-lang-client-0306026826` (billing *Khelsutra Billing*) |
34     | Region | asia-south1` (Mumbai), UBLA, co-located with the GPU VMs |
35     | Auth | SA rally-worker@gen-lang-client-0306026826.iam.gserviceaccount.com`
36     (roles/storage.objectAdmin`); key at ~/gcp/rally-worker-sa.json` (local only, **never
37     committed**). Interactive: gcloud auth login`. |
38     | Size today | ~2.06 GB (mostly past dry-run reels/outputs ? **not** the full corpus) |
39
40     The engine is **backend-agnostic by URI** (backend/storage/ref.py`): gs://` (or
41     s3://`, gdrive://`, or a bare local path. Pick the backend with **config + creds, no
42     code change**.
43     ---
44
45     ## 2. Canonical layout (the target contract)
46
47     The cloud worker's input/output contract (backend/worker/__main__.py`; lineage:
48     DECOUPLED_COMPUTE/04`):
49
50     | Prefix | Holds | Who reads/writes it |
51     |---|---|---|
52     | videos/` | source videos / proxies (<clip>.mp4`) | **input** to worker infer` &
53     worker train` |
54     | labels/` | golden rally labels (<clip>.rallies.csv`) | **input** ground truth to
55     worker train` + all eval |
56     | trajectories/` | cached WASB trajectory CSVs | ? **eval/litmus input** (GPU-free),
57     consumed via manifests/golden.json`. **NOT** read by worker train` (it synths or re-extracts)
58     |
59     | weights/<version>/` | trained Gen-0 bundles (weights.json` + a run manifest.json`)
60     | **output** of worker train` |
61     | models/` | upstream pretrained weights (wasb_badminton_best.pth.tar`) | **staged to
62     a local path** ($WASB_WEIGHTS` / ~/models/?`) for the detector ? not read from gs://` in
63     place |
64     | outputs/<video_id>/` | per-video inference outputs (intervals, etc.) | **output** of
65     worker infer` |
66     | highlights/`, promo/` | rendered reels + promo artifacts | output / demo |
67
68     > **Note on the manifest.** worker train` does **not** read a pre-staged corpus
69     manifest.json` ? it
70     > *builds* one on-box at train time from labels/` (+videos/`), extracting trajectories
71     **synthetically
72     > by default** (--trajectory-source synth`, CPU-mock) or for real via opt-in
73     --trajectory-source
74     > detector` (needs videos/`). A manifest.json` only appears as an **output** inside
75     each
76     > weights/<version>/` bundle. The **eval/litmus** path is what wants a stable, path-
77     resolvable manifest
78     > ($7.3) ? and manifests/golden.json` is currently consumed by **no code yet** (eval is

```

```

local-FS only;
62     > see Known blockers).
63
64     ---
65
66     ## 3. What's actually in the bucket today (2026-06-22)
67
68     > **Phase-1 landed 2026-06-22:** added `trajectories/` (15), 15 canonical
`labels/<date>_<name>.rallies.csv`
69     > (= original-6 + `GX010137`/`GX010141` + 7 new; the 7 old `_proxy`/bare dupes were
deleted), and
70     > `manifests/golden.json`. The table below is the **pre-Phase-1** snapshot; the
remaining gap is **videos**
71     > (14 of 15) ? see §6/§7b/§8.
72
73     | Prefix | Present | Drift / notes |
74     |---|---|---|
75     | `labels/` | 7 files: `GX010128`, `mahadevpura-1`, + `Badminton BXH 2_proxy`, `Boxhill
Doubles_proxy`, `GX020094_proxy`, `GX030094_proxy`, `mahadevpura-2_proxy` | ? **inconsistent
naming** (`_proxy` on some, not others); ? **missing** the original-6 labels + `GX010137`,
`GX010141` |
76     | `videos/` | 3: `GX030094_proxy.mp4`, `mahadevpura-1.MP4`, `mahadevpura_smoke_180s.mp4`
| ? corpus videos/proxies almost entirely absent |
77     | `trajectories/` | ? | ? **does not exist** (every trajectory is local-only) |
78     | `models/` | `wasb_badminton_best.pth.tar` | ? (? WASB-C3 weight-provenance still an
open legal item before any external share) |
79     | `weights/` | `0.1.0-l4/` | ? first real L4 train bundle |
80     | `outputs/` | one `<video_id>/`, `parity/` | ? dry-run outputs |
81     | `highlights/`, `promo/` | reels + promo | ? |
82
83     **Drift summary:** the bucket has extra prefixes (`highlights/`, `promo/`, `models/`
alongside
84     `weights/`) and **inconsistent `labels/` naming**, and is **missing the bulk of the
corpus inputs**
85     (`videos/`, all `trajectories/`, most `labels/`). It reflects past *dry runs*, not a
complete corpus.
86
87     ---
88
89     ## 4. How the cloud consumes it
90
91     Provisioning + the verified commands live in
[ `deploy/gcp/README.md` ](../deploy/gcp/README.md) §3?§5.
92     The data-facing entry points (`backend/worker/__main__.py`):
93
94     ```bash
95     # config (no secrets in config; auth via GOOGLE_APPLICATION_CREDENTIALS):
96     #   { "storage": { "backend": "local", "gcs": { "project": "gen-lang-client-0306026826"
} } }
97
98     # INFERENCE on one cloud video -> outputs/<video_id>/ in the bucket
99     python -m backend.worker infer \
100         --video-uri gcs://khelsutra-rally-corpus/videos/<clip>.mp4 \
101         --out-uri gcs://khelsutra-rally-corpus --segmenter wasb_hybrid --config config.json
102
103     # TRAIN from the bucket (reads labels/ [+ videos/], extracts trajectories, builds
manifest on-box,
104     # runs training.gen0.harness, pushes weights/<version>/):
105     RALLY_DETECTOR_IMPL=native python -m backend.worker train \
106         --corpus-uri gcs://khelsutra-rally-corpus --out-uri gcs://khelsutra-rally-corpus \
107         --version <v> --trajectory-source detector --segmenter wasb_hybrid --config
config.json
108     ```
109
110     A bare/relative path resolves under a configured `input_root`/`input_backend`

```

```

111     (`backend/storage/ref.py::resolve_input_uri`), so workflows can be written bucket-
relative.
112
113     ---
114
115     ## 5. The gap ? what's still local-only (why the box is still a blocker)
116
117     All of this is tiny except the originals ? the metadata that blocks cloud eval is <
25 MB total:
118
119     | Data | Where it is now | Size | In bucket? | Needed for |
120     |---|---|---|---|---|
121     | 20 WASB trajectory CSVs | `C:\?\Annotation Setup\Collect\Trajectories\` | 17.5 MB
| ? none | eval/litmus (cached). *(No `cached` train source exists ? train synths or detector-
extracts.)* |
122     | golden manifest | `output/human_lovo_manifest.json` (C:-absolute paths) | 4.5 KB | ? |
eval corpus definition |
123     | original-6 labels | `F:\[Khelsutra]?\Training\Golden Labelled\*.rallies.csv` | ~12 KB
| ? | train + eval |
124     | 7 new-clip labels | repo `output/*.rallies.csv` (gitignored) F: archive (backed
up 2026-06-22) | ~12 KB | ? partial/inconsistent | train + eval |
125     | source videos / proxies | F: archive + Google Drive golden folder | 100s of GB | ?
3 only | infer + train (real WASB extraction) |
126
127     > The corpus metadata (trajectories + labels + manifest, ~25 MB) is what actually
blocks GPU-free
128     > cloud eval and the served Gate-A litmus ? and it's trivially small to migrate. The
videos are the
129     > only large migration, and they already exist on Google Drive (the golden-corpus
folder), so they
130     > can go Drive ? bucket from a cloud box, keeping the local machine out of the path
entirely.
131
132     ---
133
134     ## 6. Migration plan (close the gap)
135
136     Phase 1 ? corpus metadata (?25 MB, do first, removes the eval blocker). Stage all
trajectories,
137     all labels, and a bucket-relative eval manifest into `gs://khelsutra-rally-corpus`.
Pending the §7
138     naming decision. Sketch:
139
140     ```bash
141     # trajectories (decision-free; absent today)
142     gcloud storage cp "C:\?\Collect\Trajectories\*.csv" gs://khelsutra-rally-
corpus/trajectories/
143     # labels (after the §7.1 naming decision) -> labels/<canonical-name>.rallies.csv
144     # eval manifest with gs:// (or bucket-relative) paths -> a stable manifest object (§7.3)
145     ```
146
147     Phase 2 ? videos ? `videos/<name>.mp4` (bucket name = the eval `name`, consistent
with
148     `trajectories/` + `labels/`). Sources (resolved 2026-06-22 ? see
`scratch/copy_videos_to_gcs.ps1`):
149
150     | Source | Clips | Size |
151     |---|---|---|
152     | Drive golden folder `?/Golden Label Videos Request - June 15/[Done] Video N\`
(proxies) | `mahadevpura_1/2`, `GX010128`, `GX020094`, `GX030094`, `Badminton_BXH_2`,
`Boxhill_Doubles` (7) | ~13.5 GB |
153     | F: archive (full MP4s ? proxy-first before upload) | `GX010137`, `GX010141`, +
original-6 (`adarsh_avi_singles`, `kushagra_singles`, `largetest_doubles`, `gbaaddy`,
`testlarge_short`, `mahadevpura_singles`) (8) | ~50 GB |
154

```

```

155     **Two ways to run it:**
156     - **Decoupled (preferred ? no local box):** `rclone` on a cloud VM with a Google-Drive
remote ?
157     `rclone copy gdrive:"<?/[Done] Video N>/<proxy>.mp4" :gcs:khelsutra-rally-
corpus/videos/<name>.mp4`
158     (one-time owner step: `rclone config` ? `gdrive` remote OAuth). Or `gdown <file-id>`
on the box for
159     the shared folder. This is the path that actually removes the local box.
160     - **Interim (today, owner box ? streams Drive/F: ? local ? GCS):** `pwsh
scratch/copy_videos_to_gcs.ps1
161     -Execute` (dry-run without `-Execute`; `-Only <name>` for one; skip-existing). Uses
local bandwidth.
162
163     **Priority:** the 7 Drive **proxies** first (already 1080p, sufficient for detection).
The 8 large F:
164     full MP4s should be **proxied to 1080p first** (cheaper storage + faster cloud decode)
before upload.
165     ? Two pre-existing non-canonical video objects (`videos/GX030094_proxy.mp4`,
`videos/mahadevpura-1.MP4`)
166     are superseded once `videos/GX030094.mp4` / `videos/mahadevpura_1.mp4` land ? verify-
dupe-then-delete
167     (same as the label cleanup). Track per-clip in S8.
168
169     **Phase 3 ? make eval/litmus read GCS (real code, NOT a config flip).** The eval drivers
170     (`served_gate_a.evaluate_video`, `calibrate_wasb.load_golden_gts`,
`TrackNetRunner.parse_trajectory_csv`)
171     open `spec["trajectory"]`/`spec["labels"]` with plain `open()` and gate on
`os.path.isfile()` ? they
172     have **no storage-layer fetch**, so a `gs://` manifest cannot be consumed today. Phase-3
must thread
173     `storage.fetch`/`resolve_input_uri` through those paths first. Then: re-probe
`fps`/`frame_width` from
174     the bucket videos (don't trust the copied values ? a wrong fps silently mis-aligns every
label), and
175     **re-measure the served Gate-A litmus on the GCS 15-clip set as a [[launch-report-
convention]] event**
176     (dual-set RAW+golden no-regression, not a silent eval-set swap ? see PR #236).
177
178     ---
179
180     ## 7. Decisions
181
182     1. **`labels/` naming ? LOCKED (owner, 2026-06-22):** `labels/<YYYY-MM-
DD>_<name>.rallies.csv`, where
183     `<name>` is the eval/manifest clip name and `<YYYY-MM-DD>` is the label's **authoring
date** =
184     the *earliest* mtime across all known copies (C: working copy + F: archive ? robust
to copy-resets;
185     a restored C: copy shows today, the F: archive keeps the real date). Fixes the
`_proxy` inconsistency
186     and disambiguates recycled GoPro names by date. *(Future, when videos are in the
bucket: optionally
187     add a `video_id`/MD5 sidecar for the strongest keying ? deferred, needs hashing each
video.)*
188     2. **Cache `trajectories/` ? YES, done 2026-06-22.** `trajectories/<name>.csv` cached so
cloud/CI eval +
189     the served Gate-A litmus run **GPU-free** (training can still regenerate via
`--trajectory-source detector`).
190     3. **Eval manifest in GCS ? done 2026-06-22.** `gs://khelsutra-rally-
corpus/manifests/golden.json`
191     (15 clips, `gs://` trajectory + label paths). The **local** litmus keeps its local-
path manifest;
192     flipping the litmus to read the GCS manifest is Phase 3.
193     4. **Originals migration scope ? OPEN** ? proxies-only vs full 4K, and how much of the
15-clip golden

```

```

194         set vs the wider archive. Source = Google Drive ? bucket from a cloud box (not the
local box).
195
196     > Phase-1 was run via a dry-run planner (resolve every clip's trajectory + label, stamp
the label's
197     > authoring date, build the `gs://` manifest) ? `gcloud storage cp` (planner kept in
gitignored
198     > `scratch/`; promote it to `scripts/` if corpus-sync recurs).
199     > ? **Cleanup DONE 2026-06-22:** the 7 pre-existing inconsistent label objects
(`*_proxy.rallies.csv`,
200     > bare `GX010128`/`mahadevpura-1`) were confirmed **byte-identical (MD5)** to the new
canonical names
201     > (content also on C:/F:) and **deleted** ? `labels/` now holds exactly the 15 canonical
objects.
202
203     > ? **gcloud gotcha (Phase-2):** `gcloud storage cp` treats `[...]` as a glob, so source
paths under
204     > `[Done] Video N/` (Drive) or `[Khelsutra] ?` (F:) fail with "matched no objects." The
owner-box
205     > script (`scratch/copy_videos_to_gcs.ps1`) stages such paths through a bracket-free
temp file; the
206     > `rclone` cloud path has no such issue.
207
208     ---
209
210     ## 7b. Known blockers ? must-fix before the DoD (2026-06-22 adversarial review)
211
212     1. **? RESOLVED 2026-06-22 ([#319](https://github.com/Khelsutra/badminton-highlight-
indexer/pull/319))
213         ? dated labels broke `worker train --trajectory-source detector`.** *History:*
`cmd_train` derived the
214         join key as `fname.replace(".rallies.csv","")` ? `2026-06-22_GX020094`, then looked
up
215         `video_by_stem.get(name)` against bare video stems (`GX020094`), so every clip was
skipped and train
216         aborted with `<2 videos`. **Fix:** the label?clip-name derivation is now the helper
`_label_clip_name()`
217         in [backend/worker/__main__.py](../backend/worker/__main__.py), which strips both the
218         `.rallies.csv`/`.csv` suffix AND a leading `^d{4}-d{2}-d{2}_` prefix, so a dated
label and a legacy
219         bare label both resolve to the bare `videos/<name>` stem (preserves the locked human-
readable naming).
220         Tested: parametrized helper cases + a dated-label?bare-video `cmd_train` join
regression + per-label
221         skip-branch coverage. *(`synth` train + all eval were unaffected ? they don't join
videos.)*
222     2. **Phase-3 eval-on-GCS is net-new plumbing, not a flag** ? see §6 Phase-3. Eval is
local-FS only.
223     3. **`manifests/golden.json` is consumed by zero code today** (train ignores it; eval
can't fetch
224         `gs://`) ? it's correct-but-dormant until blocker #2 lands. Add a tiny manifest-
validator + a CI job
225         that authenticates to GCS and runs the litmus against it, or the DoD ("CI reads only
from `gs://`")
226         stays unverifiable.
227     4. **Gating infra (owner-only, not done):** GPU `GPUS_ALL_REGIONS` quota is still **0**
(no VM ever
228         created ? `deploy/gcp/README` §2); cloud-box secrets (SA JSON + rotated
`GEMINI_API_KEY` + WASB
229         weights staged from `models/`) aren't set up persistently. No real cloud train/infer
runs until these.
230     5. **Reproducibility:** the migration + copy helpers live in gitignored `scratch/`
231         (`migrate_golden_to_gcs.py`, `copy_videos_to_gcs.ps1`) ? promote to `scripts/` so
Phase-2/re-syncs
232         are repeatable from the repo, and add a referenced **proxy-generation** step for the

```

```

8 large F: originals.
233
234    ## 8. Progress tracker
235
236    | Item | Status |
237    |---|---|
238    | Bucket + SA + provisioning (deploy/gcp) | ? built |
239    | Cloud worker `infer`/`train` by URI | ? built (`backend/worker`) |
240    | This data-map doc | ? 2026-06-22 |
241    | Phase 1: trajectories ? `trajectories/` (15) | ? 2026-06-22 |
242    | Phase 1: labels reconciled ? `labels/<date>_<name>` (15) | ? 2026-06-22 |
243    | Phase 1: eval manifest ? `manifests/golden.json` | ? 2026-06-22 |
244    | Phase 1: remove 7 stale `_proxy`/bare label objects | ? 2026-06-22 (MD5-verified
dups, deleted) |
245    | Blocker $7b#1: dated labels join in `worker train --trajectory-source detector` | ?
2026-06-22 ([#319](https://github.com/Khelsutra/badminton-highlight-indexer/pull/319)) ?
`_label_clip_name` strips the ISO-date prefix |
246    | Phase 2: corpus videos/proxies ? `videos/<name>.mp4` | ? mapping + script done;
**1/15** demo'd (`mahadevpura_1`); 14 remain ? run `rclone` on a cloud box (preferred) or the
owner-box script |
247    | Phase 2: proxy the 8 large F: full-MP4 clips before upload | ? |
248    | Phase 3: eval/litmus default to the GCS manifest | ? |
249
250    **Definition of done:** a fresh GPU box (or CI) can run inference, the eval suite, and
Gen-0 training
251    reading **only** from `gs://khelsutra-rally-corpus` ? no `C:` / `F:` / local-Drive path
required.

1    # archives/roora-vendor/ ? Roora annotation-vendor engagement (archived 2026-06-21)
2
3    The **Roora data-labeling vendor** engagement docs, isolated from the live data-layer
methodology (owner
4    directive, 2026-06-21). The *generic* data-layer docs (recording, golden-set creation,
data sharing) live
5    in [`docs/data_pipeline/`](../data_pipeline/); these are the **vendor-specific**
artifacts. Kept for
6    posterity; relative links inside are historical.
7
8    Contents:
9    - `ROORA_LABELING_GUIDELINES.md` ? the v8 vendor-facing labeling brief / annotation spec
sent to Roora.
10   - `GOLDEN_SET_VENDORING.md` ? the vendor bake-off + Roora selection rationale (ADR-006).
11
12   > Note: the labeling guidelines double as annotation methodology; they were archived
here (vs the data
13   > layer) because they're Roora-branded/vendor-facing (owner call, 2026-06-21). The
reusable, vendor-neutral
14   > data methodology lives in `data_pipeline/`.

1      # Roora Pilot ? Badminton Review & Conventions for Scale-up
2
3      **Date:** 6 June 2026
4      **Re:** Phase-A calibration pilot ? badminton job (CVAT job id 4075945)
5      **Companion docs:** *Roora Annotation Brief ? Rally Golden Set (v2)*, *Illustrated
Annotation Guide*
6
7      ---
8
9      ## 1. Summary
10
11     Thank you ? the first badminton delivery is a solid calibration round. We've built an
ingestion
12     adapter on our side, so **your CVAT export works for us directly** and the timing/format
mechanics
13     are handled here, not in your workflow. After a full frame-by-frame review, the rally
**timings
14     are generally good** ; the items that genuinely need your attention are about
**annotation
15     completeness and rally boundaries** ? and they matter most for the larger batches coming
next.
16
17     ---
18
19     ## 2. Handled on our side ? no change needed from you
20
21     - **Export format.** Keep working in **CVAT** ; we ingest your bounding-box export as-is.
No need
22     to produce a CSV.
23     - **Timestamps.** We recompute each rally's time from the box **frame range at the true
fps**
24     (`seconds = frame / fps`), so the CVAT time attributes don't matter, and `mm:ss` vs
decimal is
25     a non-issue ? our ingestion parses both. Minor boundary slack is absorbed by padding
downstream.
26     - **Per-frame label drift.** Where a rally's boxes carried slightly different attribute
values
27     across frames, we collapse to one value per rally automatically.
28
29     ## 3. What needs your attention (for the upcoming larger batches)
30
31     These can't be fixed in code ? they're annotation-quality conventions.
32
33     ### 3.1 Completeness ? don't miss rallies *(most important)*
34     Our review found rallies with **no label**:
35     - **~1:46** ? a 5-shot rally omitted entirely (frame grab attached).
36     - **3:34?3:43** ? a full rally omitted because it was **absorbed into the previous
rally's box**
37     (the box ran from 3:25 all the way to 3:43, covering two rallies + the dead time
between).
38
39     The brief calls a missed rally *"the most serious error."* For 30-min videos this is the
#1 thing
40     to get right.
41
42     ### 3.2 One rally = one continuous interval
43     A few boxes spanned **past the shuttle-dead frame** or **across two rallies**:
44
45     | rally | delivered span | true rally | issue |
46     |-----|-----|-----|-----|
47     | 2 | 0:02?0:32 | 0:29?0:32 | box started ~27 s into dead time |
48     | 7 | 1:35?1:51 | 1:35?1:38 | box ran ~13 s past the end |
49     | 16 | 3:25?3:43 | 3:25?3:29 | box covered a **second** rally (see 3.1) |
50
51     Convention: start the box at the **serve-contact** frame, end it at the **shuttle-dead**

```

```

frame,
52     and start a **new** box for the next rally ? never let one box bridge a gap.
53
54     ### 3.3 Endings ? `winner` vs an error
55     A `winner` means the opponent made **no legal contact**. A few rallies where the shuttle
landed
56     **out** were marked `winner` (e.g. 6, 7, 9). If the rally ended on a miss, it's a
57     `forced_error`/`unforced_error`, not a winner.
58
59     ### 3.4 New field ? `last_shot_outcome` *(small label-schema add)*
60     We're adding one attribute so the physical outcome is captured alongside the reason:
61
62     | field | values |
63     |-----|-----|
64     | `ending_reason` | winner \| forced_error \| unforced_error \| service_fault \| let \|
other \|
65     | `last_shot_outcome` | in \| net \| out \| n_a |
66
67     Just add `last_shot_outcome` to the CVAT label schema (one dropdown). If that's awkward,
tell us
68     and we'll keep it optional.
69
70     ### 3.5 Scope ? pickleball & table tennis
71     The pilot is 1 badminton + 1 pickleball + 1 table tennis; we've received badminton only.
Please
72     confirm status / ETA for the other two.
73
74     ---
75
76     ## 4. Convention checklist (for the next batches)
77
78     - [ ] **Every** served point labeled ? no missed rallies, including back-to-back ones.
79     - [ ] One box per rally: serve-contact ? shuttle-dead; never bridge a gap or two
rallies.
80     - [ ] `ending_reason` ? {winner, forced_error, unforced_error, service_fault, let,
other}.
81     - [ ] `last_shot_outcome` ? {in, net, out, n_a} (one dropdown).
82     - [ ] `shots_count` = total racket contacts (serve = 1).
83     - [ ] CVAT export is fine ? we handle the rest.
84
85     *(Open items on our side to confirm with you: which brief version your team worked from,
and that
86     the per-video fps will be in the manifest going forward.)*
87

`output/local_rally_model.json`; (4) **C3 escape hatch broken** ? "train-own weights (Phase-4
roadmap)" cites a phase
that contains no such plan and ADR-002 says corpus labels are temporal-only (CAN'T train a
detector) ? own-weights is
an unscoped new workstream (coordinate labels or detector swap); (5)
OWNED_MODEL_IMPLEMENTATION_PLAN + NEXT_STEPS are
linked from NO entry point (CLAUDE.md "read first" / docs/README index) and NEXT_STEPS is
branch-only; (6) README
"yolo_hybrid by default" vs config.json `gemini` vs CODE_MAP "wasb = LIVE default"; (7)
ROADMAP still says audio
"gated on golden labels" (trigger now satisfied!) vs plan "parked, not in reserve"; (8) Roora
multisport CSVs live ONLY
in `%TEMP%` (OS-clearable) + n=6 manifest gitignored ? headline TT-0.909/pickleball-0.308
evidence is one cleanup from
loss; (9) TT-on-WASB idea silently walks into the C3 ship-gate ("multiplies per sport"); (10)

```

ship-gate F1@tIoU still
undefined while 0.44/0.54/0.480 floors circulate; repo-rename "ASAP" tracked in no tracker (BACKLOG lacks it).
- **PMF (web-grounded, sources in audit output):** pricing/cost benchmarks VERIFIED (SwingVision \$179.99/yr ~20k paying
subs rev \$2.75M +12% YoY; PB Vision \$99/yr + **\$8/hr-of-video partner API**); Gemini COGS ~\$0.30?0.60/hr ? fat margin);
but **"India badminton whitespace" FALSIFIED ? Bangalore is the most contested badminton-AI city**
Rainmatter+Prakash Padukone), VISIST.AI (70+ Bengaluru academies, Padukone School), Game Theory (Gopichand-backed smart
courts w/ auto-highlights), Stupa (\$3.3M, BWF-approved, TT?badminton) ? NONE in our 2026-06-07 competitive table.
Surviving wedge (narrow, real): **software-only rally-precise indexing of EXISTING messy multi-court BYO footage**

<persisted-output>
Output too large (31.2KB). Full output saved to: C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-badminton-highlight-indexer\c1fcb4aa-537d-41fd-858e-53f93349bf5a\tool-
results\bnyqnpdbj.txt

Preview (first 2KB):

```
- **? #333 ? API?Cloud-Run wiring** (COMPUTE_DECOUPLED M6 ? the API path). `/api/process` now
offloads DETECT to a Cloud Run GPU Job when `deployment.compute_target=cloud_run` + ingests its
`intervals.csv` rallies back into the API DB so query/compile are unchanged.
`backend/main.py::maybe_dispatch_remote` + `_ingest_remote_segments`; **DEFAULT-OFF** (returns
None for every non-cloud target ? in-process path byte-identical). Worker gained `_fail(rc)`
failure-markers (no more 30-min hang on validation/segmenter fail ? the major review find).
Cloud path requires a `gs://`-resolvable input (fast-fail on local) + `storage.output_root`.
Destroy-after-confirm preserved (prune partial cloud rows on any failure).
- **? #334 ? P3a Dockerfile** (`deploy/cloudrun/Dockerfile`): micromamba + conda-forge (BSD,
**no Anaconda ToS**) for the py3.8 WASB env, replacing Miniconda+`conda tos accept`. Cites
ADR-005 (permissive licensing).
- **? #335 ? compute-picker engine half (3a)** (master `6d3d054`): `ProcessRequest.compute`
(`"local"|"cloud"|None) per-request override + `get_compute_backend(target_override)` +
`_cloud_available()` + `deployment.cloud_available` in `/api/capabilities` (SPA shows the toggle
only when cloud can dispatch). **Adversarial review (1 Agent) caught a BLOCKER:** `/api/process`
is async (202?persist job?worker reconstructs the request) so `compute` was dropped across the
boundary ? **schema v8 `jobs.compute` column** + `create_job`/`_job_to_request` thread it
through; boundary regression tests lock it. Suite **1443?**, ruff+mypy clean, cov **85.39%**,
all 10 CI green.
...
</persisted-output>

24:**Checkpoint:** 2026-06-22 (? **GCS = corpus source-of-truth ? `docs/DATA_IN_GCS.md` +
Phase-1 metadata MIGRATED ? PR [#316](https://github.com/Khelsutra/badminton-highlight-
indexer/pull/316) OPEN; F: label backup done**). Owner goal: run ALL train+infer from the cloud
with ALL data in `gs://khelsutra-rally-corpus` ? remove the local box as a blocker; document
where data lives so other sessions pick up from the bucket. [[gcs-data-source-of-truth]]
26:- ? **Gap measured:** corpus *metadata* is **~25 MB & entirely local** ? 20 trajectory CSVs
(17.5 MB at `C:\?\Collect\Trajectories\`), `output/human_lovo_manifest.json` (C:-absolute
paths), most labels. Bucket has only 3 videos, **no `trajectories/`**, inconsistent `_proxy`
label naming. Only the VIDEOS are large ? migrate **Drive?bucket from a cloud box**, not via the
local box.
27:- ? **F: backup done:** the 7 single-copy new-clip labels hash-verified into `F:\[Khelsutra]
GoPro Hero Black 12\KhelSutra\Training\Golden Labelled\`. ? F: root was RENAMED `GoPro Hero
Black 12`?`[Khelsutra] GoPro Hero Black 12` between turns ? live proof of the path-fragility GCS
fixes.
30:- ? **Phase-2 SET UP + demo'd:** per-clip video?`videos/<name>.mp4` mapping (7 Drive proxies
in `[Done] Video N/` + 8 large F: originals) + `scratch/copy_videos_to_gcs.ps1` (skip-existing;
temp-stages bracketed paths) + the decoupled `rclone`-on-cloud path. Proved E2E:
`videos/mahadevpura_1.mp4` (523MB) copied Drive?bucket. **14/15 videos remain.** GOTCHA: `gcloud
storage cp` globs `[...]` ? `[Done]`/`[Khelsutra]` paths need temp-staging (rclone avoids it).

52

53 **Checkpoint:** 2026-06-22 (**NIGHTLY E2E ENGINE REGRESSION ? #315 MERGED + DROPLET-VALIDATED**). master `fa2342c`. Owner asked for a *pure-engine* nightly: run the configured+checkpointed pipeline on 2-3 short clips, assert the **reel count is unchanged** + quality + **cost**, **email** the report, on a **GCP GPU VM** (not local/CI ? GitHub CI can't run WASB). Built `scripts/nightly\_reelcount.py` (reel-count=`len(play\_segments)` EXACT + R2 quality + `backend.billing` cost USD/INR; exit 0/1/2/3/4; re-run-once guard) + `scripts/nightly\_email.py` (SMTP via Secret Manager/env, verified-TLS, graceful skip) + `deploy/gcp/nightly\_regression/` (self-deleting `run\_on\_vm.sh` + driver-agnostic `launch.sh` + `register\_scheduler.sh` Cloud Scheduler?Cloud Run job + `create\_nightly\_bucket.sh`) + `eval\_baselines/reelcount\_manifest.json` (extensible) + tracked doc

`docs/NIGHTLY\_ENGINE\_REGRESSION.md`. **Complements #202** (cached-trajectory CPU re-score) ? this runs the REAL model E2E. **TWO-BUCKET model (owner-agreed):** ephemeral `gs://khelsutra-rally-nightly` (30-day TTL: reports + repo tarball + build staging) vs permanent `gs://khelsutra-rally-corpus` (clips/labels/weights, no TTL) ? a bucket-wide TTL on the dedicated bucket can't touch golden data. Owner asked for a *pure-engine* nightly: run the configured+checkpointed pipeline on 2-3 short clips, assert the **reel count is unchanged** + quality + **cost**, **email** the report, on a **GCP GPU VM** (not local/CI ? GitHub CI can't run WASB). Built `scripts/nightly\_reelcount.py` (reel-count=`len(play\_segments)` EXACT + R2 quality + `backend.billing` cost USD/INR; exit 0/1/2/3/4; re-run-once guard) + `scripts/nightly\_email.py` (SMTP via Secret Manager/env, verified-TLS, graceful skip) + `deploy/gcp/nightly\_regression/` (self-deleting `run\_on\_vm.sh` + driver-agnostic `launch.sh` + `register\_scheduler.sh` Cloud Scheduler?Cloud Run job + `create\_nightly\_bucket.sh`) + `eval\_baselines/reelcount\_manifest.json` (extensible) + tracked doc

`docs/NIGHTLY\_ENGINE\_REGRESSION.md`. **Complements #202** (cached-trajectory CPU re-score) ? this runs the REAL model E2E. **TWO-BUCKET model (owner-agreed):** ephemeral `gs://khelsutra-rally-nightly` (30-day TTL: reports + repo tarball + build staging) vs permanent `gs://khelsutra-rally-corpus` (clips/labels/weights, no TTL) ? a bucket-wide TTL on the dedicated bucket can't touch golden data.

54 - **RIGOROUSLY TESTED on the D0 droplet** (`claude-do-rally-test` 168.144.126.176, CPU/motion segmenter ? validates the runner+alert+cost, not WASB-on-GPU): ran a couple of times clean (deterministic reels=2, exit 0); **faked TWO issues ? alert caught both** ? behaviour regression (`dead\_time\_merge\_gap` 2?5 ? reels 2?1, exit 1) + a missing clip (pipeline error, exit 1, run completes). **The real-machine run caught 2 bugs the mocked tests couldn't** (now fixed + regression-tested): (1) missing `add\_video` ? FK fail ? reels silently 0; (2) one bad clip crashed the whole run (exit 2) since `storage.fetch` passes through missing local paths ? now per-clip isolated. Droplet restored to as-found (`~/rally` removed; `/srv/khelsutra-site` untouched). Adversarially reviewed (45-agent workflow, 41?29 findings, HIGH/MED fixed: SMTP cert-verify, re-run-fail?inconclusive, VM self-delete robustness). Suite 1387?, ruff+mypy+leak-scan clean, all 10 CI green.

55 - ? ****OWNER to DEPLOY** (the nightly code is merged; going live is owner-gated ? needs GCP secrets/quota I lack):** (1) `bash deploy/gcp/nightly\_regression/create\_nightly\_bucket.sh`; (2) upload 2-3 short owned clips+labels to `gs://khelsutra-rally-corpus/nightly-inputs/` + WASB weights to `weights/`; (3) SMTP app-password ? Secret Manager; (4) `launch.sh` dry-run (the FAITHFUL WASB-on-GPU run + the first `--update-baseline` freeze) ? commit `reelcount\_baseline.json`; (5) `register\_scheduler.sh`. Two open calls (defaulted, easy to change): ****driver**** (Cloud Run job vs cron vs Claude routine) + ****which clips****. Runbook: `deploy/gcp/nightly\_regression/README.md`. `[[eval-dual-set-regression]]` `[[compute-stack-gcp-only]]` `[[gcp-vm-always-delete]]`

56

57 ****Checkpoint:**** 2026-06-22 (GOLDEN-FIXTURES ****P3 ? #317 MERGED****; the golden-fixtures project is now IMPLEMENTATION-COMPLETE). master `7a40434`. Owner cleared ALL owned golden videos (owned+minors-free) + re-confirmed ****option (a)**** ? minted ****6 curated, trimmed (?12k-frame ? few-min), de-attributed REAL Tier-0 fixtures `fx\_r01`?`fx\_r06`**** (single / multi-court×2 / doubles×2 / continuously-active blob; both 29.97/59.94 fps; ****~1.9 MB total****) via a NEW `freeze\_real\_fixture --max-frames` trim. De-attributed (opaque slug, time-origin reset, scenario-only labels, ****NO**** source name/path/video_id ? grep-verified + leak-scan clean); the characterization + 3-OS cross-OS gates now replay REAL data (F1 0.0?0.59 = real CONTROL-path, ****behaviour-locking NOT field quality****; hard multi-court/blob collapse to a mega-window F1=0 = the known over-merge, now frozen). DATA found on this box: `C:\Users\avidu\Projects\Annotation Setup\Collect\{Trajectories,Golden Labelled}\` + repo `output\\*.rallies.csv` (manifest `output/human\_lovo\_manifest.json` = 15 videos); F: has the source GoPro videos (not needed). ****Surrogate?source map kept OFF-git**** (given to owner in chat: fx_r01=mahadevpura_single, r02=kushagra, r03=mahadevpura_1, r04=largetest_doubles, r05=GX010128, r06=Boxhill_Doubles). 58

59 ****Checkpoint:**** 2026-06-22 (****khelsutra brand-repo HYGIENE + DOC-FRESHNESS SWEEP ? 2 PRs merged, clean slate****). Session = "sync to remote head + low-hanging fruit + quick doc sweep." khelsutra was at master `e2570e4` (#93). ? ****[#94] hygiene**** ? `.gitignore` now covers `\*.db` (runtime `site/access.db`) + `.claude/` (machine-specific; both were untracked ? committable) + corrected a stale NEXT_STEPS PR count; ****caught my own `.gitignore` inline-comment bug via `git check-ignore` BEFORE commit**** (`.gitignore` has no trailing-comment syntax ? comments must be own-line). ? ****[#95] doc-freshness sweep**** ? a ****15-agent AUDIT**** (one verifier/doc, every falsifiable claim checked at file:line incl. cross-repo vs engine `origin/master`) found ****44 stale findings**** (the pattern: docs froze at their authoring-PR while the SPA / engine API / localization / alpha-deploy shipped past them) ? a ****12-agent FIXER fan-out**** applied ****63 surgical edits across 13 docs****; I ****independently re-verified every load-bearing engine claim**** on engine `origin/master` before merging (`/api/{health:308,capabilities:340,videos:374}` + compile `download\_url:768` + `native\_wasb\_runner.py` on master + `auth.py::CF\_ACCESS\_HEADER` + `\_allowed\_hosts\_from\_env` REPLACE-semantics ? all real; brittle engine line-anchors ? symbol refs like `main.py::compile\_highlights`). Honesty held (P6 stays `` engine-done/SPA-pending, native-WASB "not production-verified", footage shots owner-gated, historical changelogs preserved; the 2 `fresh` docs untouched). Also pruned ****6 stale merged local branches****. ****All CI green (site+web+layout); 0 open PRs; only `master` locally; khelsutra master now `7dc7de5`.**** ***(Brand/site track ? distinct from the serving/packaging/UX/golden threads below.)*** `[[lesson-verify-engine-surface-before-scoping]]` `[[working-agreement-merging]]` `[[doc-status-register]]`

60

61 ****Checkpoint:**** 2026-06-22 (GOLDEN-FIXTURES ****P0 ? #314 MERGED****, master `5c2eec8`; a SEPARATE thread from packaging/UX). Owner: "all owned golden videos are owned+minor-free; pick (a); make P0 now." On scouting, P0 was bigger/riskier than the audit's "4 files": the video names are FUNCTIONAL (eval_baselines keys ? training floor + the gitignored `output/human\_lovo\_manifest.json` + data files; `MULTICOURT\_CLIPS`; hot in QUALITY_ITERATIONS/the quality track) ? surfaced it ? owner picked ****SAFE SCOPE****. Shipped: scrubbed personal `C:\Users\avidu` paths from 3 code docstrings + ****tools/leak_scan.py**** (structural PII guard: 32-hex MD5 + personal paths over backend/training/scripts/tools/eval_baselines; tests/ excluded; optional gitignored `leakscan\_private` for local name scanning) + CI `leak-scan` job + 10 tests. Clean scan; suite ****1365?/7s****, cov ****85.27%****, all CI green. ****DEFERRED (safe-scope):**** the functional video-name rename + git-history rewrite (need manifest/data/training-floor coordination + quality-track pause; do before open-sourcing). ?? ****NEXT = P3 real Tier-0 fixtures**** ? owner APPROVED (all owned cleared + ****a**** commit de-attributed per-frame CSV); needs the golden ****trajectory CSVs**

+ label CSVs** (`Annotation Setup/Collect/Trajectories/` + `Golden Labelled/` / OneDrive
`golden-data/`) ? I locate them or owner points me, then `--freeze-real` per video. Golden-
fixtures track = #186/#189/#191/#192/#193/#194 + #314, all merged+audited. [[golden-set-
vondoring]]

62

63 **Checkpoint:** 2026-06-22 (? **GCS = corpus source-of-truth ? `docs/DATA\_IN\_GCS.md` +
Phase-1 metadata MIGRATED ? PR [#316](https://github.com/Khelsutra/badminton-highlight-
indexer/pull/316) OPEN; F: label backup done**). Owner goal: run ALL train+infer from the cloud
with ALL data in `gs://khelsutra-rally-corpus` ? remove the local box as a blocker; document
where data lives so other sessions pick up from the bucket. [[gcs-data-source-of-truth]]

64 - ? **Authoritative map `docs/DATA\_IN\_GCS.md`** (indexed in docs/README.md; branch
`work/golden-corpus-hygiene`, commit `8884c9f`): bucket layout · current contents + **drift** ·
how `backend.worker infer|train` consume `gs://` · the gap · phased migration plan + DoD. The
cloud engine already exists (archived DECOUPLED_COMPUTE: `worker infer --video-uri` /
`worker train --corpus-uri`, URI backends in `backend/storage/ref.py`, `deploy/gcp/`) ? the doc
records WHERE bytes are, it does NOT redesign.

65 - ? **Gap measured:** corpus *metadata* is **~25 MB & entirely local** ? 20 trajectory
CSVs (17.5 MB at `C:\?\Collect\Trajectories\`), `output/human\_lovo\_manifest.json` (C:-absolute
paths), most labels. Bucket has only 3 videos, **no `trajectories/`**, inconsistent `\_proxy`
label naming. Only the VIDEOS are large ? migrate **Drive?bucket from a cloud box**, not via the
local box.

66 - ? **F: backup done:** the 7 single-copy new-clip labels hash-verified into
`F:\[Khelsutra] GoPro Hero Black 12\KhelSutra\Training\Golden Labelled\`. ? F: root was RENAMED
`GoPro Hero Black 12`? `[Khelsutra] GoPro Hero Black 12` between turns ? live proof of the path-
fragility GCS fixes.

67 - ? **Phase-1 DONE (uploaded to the bucket):** `trajectories/<name>.csv` (15),
`labels/<YYYY-MM-DD>\_<name>.rallies.csv` (15), `manifests/golden.json` (gs://-pathed, 15 clips).
Naming LOCKED (owner): manifest name + authoring-date prefix = earliest mtime across C:/F:
copies (robust to copy-resets). ? **These golden traj+label CSVs are exactly what the GOLDEN-
FIXTURES P3 thread (#314 checkpoint above) was hunting for ? now in GCS.**

68 - ? **Owner decisions RESOLVED (DATA_IN_GCS \$7):** naming=date-prefixed manifest name;
cache trajectories=yes; GCS eval manifest=yes. **Still OPEN:** (4) originals migration scope. ?
#1 cleanup DONE: the 7 stale `\_proxy`/bare label objects were MD5-verified byte-identical
dupes + deleted ? `labels/` = exactly 15 canonical.

69 - ? **Phase-2 SET UP + demo'd:** per-clip video? `videos/<name>.mp4` mapping (7 Drive
proxies in `[Done] Video N/` + 8 large F: originals) + `scratch/copy\_videos\_to\_gcs.ps1` (skip-
existing; temp-stages bracketed paths) + the decoupled `rclone`-on-cloud path. Proved E2E:
`videos/mahadevpura\_1.mp4` (523MB) copied Drive?bucket. **14/15 videos remain.** GOTCHA: `gcloud
storage cp` globs `[...]` ? `[Done]`/`[Khelsutra]` paths need temp-staging (rclone avoids it).

70 - ? **4-lens adversarial review (`wf\_18dcd7ff`) FOUND a real BLOCKER (code-verified):**
date-prefixed labels break `worker train --trajectory-source detector` ? `cmd\_train` joins the
FULL label stem (`2026-06-22\_GX020094`) vs bare video stems (`backend/worker/\_\_\_main\_\_.py:384` vs
`:378/:387`) ? every clip skipped. Fix = strip the date prefix in cmd_train (chip
task_53b5e190, own PR+test). synth-train + eval unaffected. Also: Phase-3 eval-on-GCS is
net-new code (eval is local-FS only, no gs:// fetch); `manifests/golden.json` consumed by
zero code yet. (Risk-agent hallucinated 2 nonexistent scripts ? disregarded per [[working-
agreement-attribution]]).

71 - ? Branch `work/golden-corpus-hygiene` off origin/master (`689c738`), **4 docs(data)
commits, pushed ? PR [#316](https://github.com/Khelsutra/badminton-highlight-indexer/pull/316)
OPEN for review** (no self-merge; docs-only). Serving WIP `6fdd1d4` +
`scratch/{PACKAGING\_PLAN.serving-wip.md,migrate\_golden\_to\_gcs.py,copy\_videos\_to\_gcs.ps1}`
preserved (gitignored ? not in PR; promote to scripts/ next). Prior #236 served-Gate-A MERGED
2026-06-19; re-measuring the litmus on the GCS 15-clip set is a [[launch-report-convention]]
dual-set event. **? NEXT-SESSION ORDER:** (1) merge #316; (2) worker date-strip fix (chip
task_53b5e190); (3) Phase-2 videos via rclone-on-cloud, proxies-first; (4) Phase-3 eval-fetch
code + #236 re-measure; (5) unblock the golden-fixtures thread (CSVs already in GCS); (6) GPU
quota + cloud secrets (owner) + promote scratch scripts. [[compute-stack-gcp-only]] [[gotcha-
shared-checkout-branch-collisions]] [[lesson-verify-engine-surface-before-scoping]]

72

73 **Checkpoint:** 2026-06-22 (**PACKAGING P2b + P2c ? BOTH MERGED; v1 LIGHT engine-
complete + wizard'd**). Same session as the P3 checkpoint below; owner: "complete P2b-install" ?
"start P2c wizard SPA now" ? "merge #310 now". **? P2b-install ? engine
[#310](https://github.com/Khelsutra/badminton-highlight-indexer/pull/310) MERGED** (master
`f8b2c3b`): `write\_light\_default\_config` seeds a truly-local + **`motion`** (gate **08** =
resolved) torch-free default `config.json` on the first `indexer --app` (minimal, profile-

driven, NEVER overwrites; placed before `load\_app\_config`, scoped to `--app`);
`scripts/install.py` (stdlib, cross-platform ? `uv tool install` else pip + a per-OS launcher
shortcut that **pins** `RALLY\_APP\_HOME` ? load-bearing since `load\_dotenv` runs at import +
writes an uninstall manifest) + `scripts/uninstall.py` (manifest-driven; KEEPS user data unless
`--purge`) + README. **12-agent adversarial review** (`wf\_2be29ecf`) folded: **MAJOR PATH-**
robustness (`uv tool update-shell` + resolve+embed the abs `indexer` path + warn) + uninstall
containment guard (`\_within(path, app\_home)` refuses rmtree outside app-home ? a
corrupted/foreign manifest can't nuke an arbitrary dir) + `--dry-run` fidelity + tests for the
destructive path. Suite **1352?**, ruff+mypy clean, cov **85.17%**. ? **CI was billing-blocked**
for hours ? the engine repo bills under the **Khelsutra` ORG`** (separate from the personal
account); owner fixed the ORG billing ? CI green ? merged. **P2c first-run wizard** ? khelsutra
[#88](https://github.com/avidullu/khelsutra/pull/88) MERGED (master `7ae9cee`):
`web/src/components/SetupWizard.tsx` ? 3 steps (AI-key **guided-setup** since no key-write
endpoint yet / compute from `GET /api/capabilities` / videos) rendered before `IngestPanel`,
shows once per browser (localStorage), 6 langs (en/kn/hi/es/da/id, brand stays Latin "KhelSutra"
per #77), `getCapabilities()` + `EngineCapabilities`. **223 web tests** (+ the i18n
parity/brand/no-bare guards) + **browser-verified e2e** against a live local engine (all 3 steps
render real caps: ffmpeg+GPU detected; offline degrades gracefully). **13-agent review**
(`wf\_191a9b86`) folded: **MAJOR a11y** (the "Get a free Gemini key" link was below the 44px tap
floor ? `min-h-11`) + loading-window finish-button (gated to `offline` only) +
`role=dialog` ? `region` + kn brand spacing + the no-bare-strings guard now covers SetupWizard. ?
a sibling reorg-merged **#87** (es/da/id catalogs) mid-build ? rebased (auto-merged clean) + re-
synced `site/public/locales` via `npm run copy:locales` (a `locales-drift.test` enforces the
mirror). Both built in **isolated worktrees** off `origin/master` (since removed); sibling
worktrees untouched. **Also this session** (owner asks): deployed the real Gemini key (from `G:\My
Drive\gemini.api_key.txt`) to the droplet `/etc/khelsutra/engine.env` + validated live (55
models, \$0) + ran the FULL suite on the droplet (1313 passed); injecting the key auto-started
`khelsutra-engine` (enabled unit) on loopback ? owner: "keep it running" (NOT publicly exposed ?
`api./app.khelsutra.guru` have no public DNS route yet). **LOOP CLOSED** ? engine
[#312](https://github.com/khelsutra/badminton-highlight-indexer/pull/312) MERGED (master
`293e5c0`): re-bundled `backend/ui/` from khelsutra@7ae9cee via `scripts/bundle\_ui.sh` so
indexer --app now **SERVES** the wizard (`/api/version` spa_commit=7ae9cee; `/` serves `index-
GSXqL6iY.js`; live-boot proven). Pure vendored-asset refresh; 53 UI/skew contract tests + full
suite 1355? + cov 85.25%. **v1 LIGHT** is now feature-complete ? only OWNER steps remain: a
clean-Windows/macOS-box acceptance run + ffmpeg-acquisition UX (winget/brew/apt is still a
manual dep). North-star (native-WASB-in-default-download P3b/P4a + training P4b + annotation
P4c) stays future + counsel(03)/owner-GPU-gated. **THIS SESSION TALLY: 3 PRs merged** (#310
P2b-install, khelsutra #88 P2c wizard, #312 bundle) + P3 GPU validation (\$0) + droplet
key/suite. 0 open PRs, 0 VMs, all worktrees/branches cleaned. **North-star** (native-WASB-in-
default-download P3b/P4a + training P4b + annotation P4c) stays future + counsel(03)/owner-GPU-
gated. [[packaging-app-plan]] [[next-session-packaging-app]] [[gotcha-shared-checkout-branch-
collisions]] [[working-agreement-merging]]

74

75 **Checkpoint:** 2026-06-22 (**PACKAGING P3** ? GPU validation of the LIGHT-tier WHEEL on a
real L4, end-to-end, \$0). Owner greenlit the spend (AskUserQuestion). Provisioned an **L4**
`rally-gpu` (`g2-standard-4`, **asia-south1-a** Mumbai) ? shipped the `origin/master` archive ?
built the wheel ON the box + installed it NON-editable
(`badminton\_highlight\_indexer-0.1.0-py3-none-any.whl`, base LIGHT, no extras) ? **import**
backend.main` works with `torch installed = False` (the P2e torch-free promise PROVEN on a GPU
box; every backend `import torch` is function-local) ? built the **SEPARATE** WASB conda env
(py3.8/torch1.11) reached via `\$WASB\_PYTHON` (the native path is a pure `subprocess` shell-out ?
`native\_wasb\_runner.py`). Then booted the **packaged launcher** `indexer --app` from a NON-repo
cwd (app-home isolated state) ? `/api/health` ok . `/api/version` reports the bundled SPA
(khelsutra@46e0244, content_hash ac2a3d6) . `/api/capabilities` = `ffmpeg:true,ffprobe:true /
nvidia_smi_present:true / wasb_weights_present:true / gemini_key_present:false` . **bundled SPA**
served at `/\*` ? drove the REAL API `POST /api/process(wasb\_hybrid)` ? poll /api/jobs ?
/api/query ? /api/compile ? /api/reels` with the tuned 22-rally recipe (`detector_impl=native` +
`skip\_ai\_handoff=true` + `min\_shot\_count=0`) ? **RALLIES DETECTED=22** (reproduced the golden
result via the PACKAGED stack, not `scripts/`) ? **p3_highlights.mp4` 73.7 MB** watermarked
reel ("Dynamic highlight reel saved", all 22 segments). **Proof preserved** to `gs://khelsutra-
rally-corpus/highlights/p3_{packaging_highlights.mp4,run.log,app.log}` (survives teardown).
VM DELETED + audited 0 instances / 0 disks ? \$0 (~14 min ? **\$0.17**, far under the
\$100/?10k cap). Ops-Agent auto-installed + verified (NVML receiver healthy, GPU graphs live;
boot-time duplicate-write export errors are transient, settled). ? The ONLY hiccup was cosmetic:
my driver's `urlopen(timeout=60)` tripped on the synchronous 22-clip `/api/compile` (~65s) ?

****client-side only; the server completed the stitch**** (sync endpoint runs to completion regardless of client disconnect). The packaging insight WORTH KEEPING: ****a plain torch-free LIGHT wheel + a separately-provisioned WASB conda env = full GPU-quality reel**** ? the dual-env architecture (PACKAGING_PLAN \$4.4) is real on hardware. ? ****P3 DONE**** ? next packaging items = ****P2b-install**** then ****P2c wizard**** (per `[[next-session-packaging-app]]` / `[[packaging-app-plan]]` \$7). Screenshot = owner records from the preserved reel/logs (or a local LIGHT-tier `indexer --app` browser capture, \$0). Built in a detached worktree off `origin/master` (since removed); the serving checkout was untouched. `[[gcp-vm-always-delete]]` `[[gcp-ops-agent-enable]]` `[[packaging-app-plan]]`

76

77 *****?? SESSION WRAP ? 2026-06-22 (THE ALPHA IS LIVE + a full real-use QA pass). READ THIS FIRST to carry the torch.****

78 - ****WHAT'S LIVE:**** `https://api.khelsutra.guru` = the alpha, ****single-origin**** (the engine serves the `latest SPA 7dc7de5` at `/` + the API at `/api`, behind ONE Cloudflare-Access cookie, email-OTP gated to `avi.dullu@gmail.com`, real Gemini key). ****PROVEN END-TO-END:**** owner uploaded a real 6.9-min match in a browser ? ****26 rallies**** (semantic query box worked) ? reel built (the "build failed" was a Cloudflare ****524****, not a real failure ? the reel exists: `?/api/highlights/{video_id}/{name}.mp4`). Engine on the CPU droplet `root@168.144.126.176` (key `~/ssh/khelsutra_droplet`), `khelsutra-engine+cloudflared` systemd, config `/srv/khelsutra/config.json`, latest code (Finding B). ? ****`app.khelsutra.guru` needs a DNS edit**** (`CNAME app ? 55142398-cfargotunnel.com` proxied`) ? the CF token STILL lacks `Zone.DNS:Edit`; Pages app-domain removed. Use `api.`` until then.

79 - ****DONE THIS SESSION:**** deploy de-risk (khelsutra #78/#79/#81/#85) ? full deploy executed (engine pushed to droplet, CF Access app `2bb7d8d7`` + tunnel `khelsutra-studio 55142398`` + Pages all via API) ? exhaustive box testing (suite ****1313?**, ruff/mypy clean, boot-posture/Host-guard/jail/upload/edge-auth all live-verified**) ? ****Finding B ? engine #311 MERGED + redeployed + verified**** (missing key now fails loud, not silent 0-rally) ? ****cross-origin Access bug FOUND+FIXED via single-origin**** ? latest SPA bundled+served ? real-use ****alpha-QA: 13 issues filed.****
