You are an adversarial verifier in a tech-debt audit. Your default stance: REFUTE. Today is 2026-07-02.
A finder claims the following about the repo at C:/Users/avidu/Projects/khelsutra-guru/khelsutra (avidullu/khelsutra):

```
{  
  "title": "Issue #112 still valid: Share to WhatsApp sends text only, no Web Share API attempt",  
  "category": "tech-debt",  
  "severity": "P2",  
  "file": "web/src/components/CompileResult.tsx",  
  "line": 79,  
  "evidence": "CompileResult.tsx:79 still builds the wa.me text-only link ('wa.me can't attach the local file' comment at :76-77); grep for navigator.share/canShare over web/src returns no matches ? the proposed file-share path was never started. Labeled 'bug' on the issue; reel URLs are CF-Access-gated so a link can't substitute.",  
  "proposed_fix": "Implement the issue's plan: fetch the reel blob -> new File -> navigator.canShare({files}) ? navigator.share(...) : graceful fallback (download + 'attach it in WhatsApp' hint, keep wa.me). Contained to CompileResult + catalog strings + tests; main win is mobile one-tap video share.",  
  "effort": "M",  
  "tracked_in": "khelsutra#112"  
}
```

Repo root candidates: C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer, C:/Users/avidu/Projects/khelsutra-guru/khelsutra, C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector, C:/Users/avidu/Projects/khelsutra-guru/rally-annotator, C:/Users/avidu/Projects/khelsutra-guru/sports-obsreport (pick from the finding's repo field; non-git dirs: 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup', C:/Users/avidu/Projects/khelsutra-guru/khelsutra-screencast).

VERIFY against the CURRENT working tree (just pulled to origin master/main): (1) does the cited code actually exist and behave as claimed at file:line? (2) was it already fixed by a recent commit (git log --oneline -15 -- <file>)? (3) is the severity honest - construct the concrete failure scenario or downgrade; (4) is the proposed fix sane and correctly scoped; (5) is it owner-gated per: alpha/serving go-live, Studio P10/P11 corpus-promotion/training, product/strategy/licensing, real cloud spend, counsel ToS/DPA?

HARD RULES: READ-ONLY (no file modifications, no installs, no test-suite runs). gh read-only commands allowed. Your reasoning MUST cite file:line you actually read. CONFIRMED requires you personally saw the defect/debt in current code; if you cannot reproduce the claim from the code, say REFUTED; if a commit fixed it, ALREADY_FIXED.

```

{"body":"**Reported from live alpha use (2026-06-22):** clicking **Share to WhatsApp** on a
finished reel opens WhatsApp with a **pre-filled text message but no video** ? the user expects
the reel itself to be shared.\n\n### Current behavior\nweb/src/components/CompileResult.tsx:79`
builds a `https://wa.me/?text=<message>` link. As the in-code comment notes, `wa.me` can carry
**text only** ? it can't attach the local file ? so the user is silently left to manually attach
the just-downloaded reel. Most users read `\"Share\"` as `\"share the video,\"` so this reads as
broken.\n\n### Why a *link* won't fix it either\nThe reel lives at `GET
/api/highlights/{video_id}/{filename}`, which is **behind Cloudflare Access** ? a recipient
outside the tenant can't open a shared link. So the fix is to share the **file**, not a
URL.\n\n### Proposed fix ? Web Share API with the file\n- Fetch the reel as a blob (the SPA
holds the CF-Access session): `fetch(highlightUrl(...))` ? `blob` ? `new File([blob],
build.filename, { type: \"video/mp4\" })`\n- If `navigator.canShare?.({ files })` ?
`navigator.share({ files: [file], title, text: t(\"result.shareText\") })` ? on supported
platforms (mobile Chrome/Safari, capable desktops) this hands the **actual video** to WhatsApp
and any other share target.\n- **Graceful fallback** where file-share is unsupported (many
desktops): keep a download + a clear hint (`\"Reel downloaded ? attach it in WhatsApp\"`), or the
current `wa.me` text link. Never a dead/empty share.\n\n### Acceptance\n- [ ] On a file-share-
capable browser (mobile especially), Share hands the **reel video** to WhatsApp/other targets ?
not just text.\n- [ ] On unsupported browsers, a graceful, clearly-explained fallback (download
+ `\"attach it\"` guidance).\n- [ ] Localized share text (`result.shareText`) retained.\n\n###
Honest scope note\nDesktop browsers ? including **Edge, where this was hit** ? have limited Web-
Share-*file* support, so they may still fall back to download-then-attach. The real win is
**mobile + capable browsers getting a true one-tap video share** (which is where most reels get
shared anyway). A public/signed shareable reel URL (so a plain link works for anyone) is a
separate, privacy-sensitive feature worth its own issue if you want link-sharing
too.\", \"labels\": [{\"id\": \"LA_kwDOS2vcnc8AAACm2ZCIg\", \"name\": \"bug\", \"description\": \"Something isn't
working\", \"color\": \"d73a4a\"}], \"number\": 112, \"state\": \"OPEN\", \"title\": \"Share to WhatsApp sends only a
text message, not the reel video\"}

```

khelsutra\deploy\GPU_VM_SERVING.md:4:instead of the CPU droplet, and **cut the Cloudflare tunnel
over** so traffic lands on the VM. Lets
khelsutra\deploy\GPU_VM_SERVING.md:14:> design hinge there is keeping the secrets (Gemini key /
Access AUD / tunnel token) out of plaintext
khelsutra\deploy\GPU_VM_SERVING.md:25:> Cloudflare dashboard, not on the box), so moving it is
just "run the same connector on the VM, then
khelsutra\deploy\GPU_VM_SERVING.md:26:> stop it on the droplet" ? **no DNS change, no new
Cloudflare token, no CF-Access change.**
khelsutra\deploy\GPU_VM_SERVING.md:37: - the **CF-Access AUD** + team domain ? already in the
droplet's `srv/khelsutra/config.json`
khelsutra\deploy\GPU_VM_SERVING.md:38:   (`security.cf_access_aud` / `cf_team_domain`); reuse
the same values.
khelsutra\deploy\GPU_VM_SERVING.md:39: - the **tunnel token** ? in the droplet's cloudflared
unit (`systemctl cat cloudflared` ? the
khelsutra\deploy\GPU_VM_SERVING.md:87:/opt/khelsutra/venv/bin/pip install -q -e '[auth,storage-
gcs]' # auth = the Cf-Access JWT verify
khelsutra\deploy\GPU_VM_SERVING.md:123:and hosts are identical** to the droplet (it's the same
tunnel + Access app).
khelsutra\deploy\GPU_VM_SERVING.md:126:`allowed_video_root=/srv/khelsutra/incoming`, your real
`cf_team_domain` + `cf_access_aud`. Set
khelsutra\deploy\GPU_VM_SERVING.md:134:RALLY_BIND_HOST=127.0.0.1 #
cloudflared dials 127.0.0.1:8000
khelsutra\deploy\GPU_VM_SERVING.md:186:lives in the Cloudflare dashboard and follows whichever
machine runs the connector. So:
khelsutra\deploy\GPU_VM_SERVING.md:190:ssh root@<droplet-ip> 'systemctl cat cloudflared' | grep
-o -- '--token [A-Za-z0-9._=-]*'
khelsutra\deploy\GPU_VM_SERVING.md:192:# 2. on the VM: install cloudflared + run the SAME token
khelsutra\deploy\GPU_VM_SERVING.md:194: curl -fsSL https://pkg.cloudflare.com/cloudflared-
stable-linux-amd64.deb -o /tmp/cf.deb && sudo dpkg -i /tmp/cf.deb
