## Transcript

### 1. user (2026-07-02T02:58:05.134Z)

You are an adversarial verifier in a tech-debt audit. Your default stance: REFUTE. Today is 2026-07-02.

A finder claims the following about the repo at C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer:

```
{  
  "title": "PR #390 (D1/P10 main.py split) is stale and CONFLICTING while main.py grew 52% since it was cut",  
  "category": "tech-debt",  
  "severity": "P1",  
  "file": "backend/main.py",  
  "line": 1,  
  "evidence": "gh pr view 390: state=OPEN, mergeable=CONFLICTING, mergeStateStatus=DIRTY, updatedAt=2026-06-26T14:37Z, 3 files (backend/main.py, backend/orchestration.py, mpy.py). Since then >=8 PRs modified backend/main.py (#400, #405-#409, #412, #413 per git log --since=2026-06-25 -- backend/main.py). wc -l backend/main.py = 2198 vs the audit doc's '1448 lines' claim (docs/CODE_CLEANUP_AUDIT_2026-06-24.md:279); 18 @app. routes and 45 print() calls now live in it; backend.main still mpy-quarantined (mpy.py:15). No backend/orchestration.py exists on master.",  
  "why_it_matters": "This is the last HIGH-severity item of the cleanup audit (P10, the only non-Phase-3 ? row in its S6 tracker) and it is compounding: every new endpoint PR lands in the god-module, widening the conflict surface and making the split more expensive each week. The 3-file extraction in #390 is now unmergeable.",  
  "proposed_fix": "Close #390 and re-cut the orchestration.py extraction fresh from origin/master (small, ~1 session), or rebase it now. Then continue the split (CLI handlers -> backend/cli/, new /api/source|api/assets|api/capabilities routes -> backend/api/) before more endpoints accrete. Update the audit doc's stale '~1450 lines' sizing while at it.",  
  "effort": "M",  
  "tracked_in": "PR #390; docs/CODE_CLEANUP_AUDIT_2026-06-24.md S6 row P10"  
}
```

Repo root candidates: C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer, C:/Users/avidu/Projects/khelsutra-guru/khelsutra, C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector, C:/Users/avidu/Projects/khelsutra-guru/rally-annotator, C:/Users/avidu/Projects/khelsutra-guru/sports-obsreport (pick from the finding's repo field; non-git dirs: 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup', C:/Users/avidu/Projects/khelsutra-guru/khelsutra-screenshot).

VERIFY against the CURRENT working tree (just pulled to origin master/main): (1) does the cited code actually exist and behave as claimed at file:line? (2) was it already fixed by a recent commit (git log --oneline -15 -- <file>)? (3) is the severity honest - construct the concrete failure scenario or downgrade; (4) is the proposed fix sane and correctly scoped; (5) is it owner-gated per: alpha/serving go-live, Studio P10/P11 corpus-promotion/training, product/strategy/licensing, real cloud spend, counsel ToS/DPA?

HARD RULES: READ-ONLY (no file modifications, no installs, no test-suite runs). gh read-only

commands allowed. Your reasoning MUST cite file:line you actually read. CONFIRMED requires you personally saw the defect/debt in current code; if you cannot reproduce the claim from the code, say REFUTED; if a commit fixed it, ALREADY\_FIXED.

```

## 5. user (2026-07-02T02:58:26.934Z)

```
e410136 api: /api/videos surfaces fps + resolution (from the stored ffprobe details) (#413)
81a78bf api: /api/videos returns video_id + a friendly match_name (fix disappearing name) (#412)
52d97b5 P4: POST /api/assets ? store a video into the user's chosen medium (#409)
7ea6ea9 P3: /api/capabilities reports usable storage backends (#408)
f28af73 P2: engine free-space guard (HTTP 507 + WSL frame-stage BLOCK) (#407)
759a67f feat(api): frame-preserving annotation proxy for /api/source (D4) (#406)
5a5c4fa feat(api): P8a ? GET /api/source + POST /api/annotations (annotate-in-UI backend) (#405)
959c630 fix(#397): write per-video report to the resolved local path, not the raw URI (#400)
b6214e5 chore: ruff format the whole repo (259 files) (#387)
cd5b3d2 feat(01/P11): Gemini remote-file GC ? startup orphan sweep (#380)
```

## 6. assistant (2026-07-02T02:58:40.682Z)

PR #390 state matches the claim exactly. Now let me verify mypy.ini and the audit doc.

## 7. user (2026-07-02T02:58:42.760Z)

[mypy]

**Lenient, GREEN baseline (quality sweep AI-4): the gate protects the clean modules and pins an explicit quarantine list below ? not a typing crusade. Ratchet: when you touch a quarantined module, try removing its entry.**

```
ignore_missing_imports = True
```

**backend/ is a namespace package (no root \_\_init\_\_.py) ? required so mypy maps files to backend.\* module names instead of duplicating top-level names.**

```
explicit_package_bases = True
```

**--- Quarantine (known-loose modules, each with a reason) ---**

**Optional module globals (db\_instance/global\_config set by create\_app() / main()). Route handlers use request.app.state exclusively; helpers take explicit params. backend.api.job\_worker lifted from quarantine (now takes explicit config/db params).**

```
[mypy-backend.main]
ignore_errors = True
```

**Worker dispatcher: composes the SAME validator/segmenter/report building blocks a backend.main, which are typed `config: dict` but receive the AppConfig migration shim at runtime (the .get() compat layer). Shares backend.main's config-shim quarantine until the typed-config migration removes the dict?AppConfig duality everywhere.**

```
[mypy-backend.worker.__main__]
ignore_errors = True
```

**yolo\_hybrid: the fusion-P1 extraction moved its loose torchvision/cv2 inline code to detectors/person\_detector.py (which IS type-clean, no quarantine). What remains here is pre-existing orchestration debt unrelated to that move (implicit-Optional process\_video defaults, the Success|Failure ABC-override mismatch, a Future[...] annotation) ? ratchet those out in a focused typing pass, not here. (wasb\_hybrid/tracknet\_hybrid left the quarantine with the AI-7 collapse.)**

#### Changelog

- `2026-06-24` ? Initial doc created from 33-item deep audit.
- `2026-06-24` ? Absorbed 2 findings from `docs/BACKLOG.md` (D13, D14). Cross-referenced D2 and O1 in §3e.
- `2026-06-24` ? Phase 1 begun. P0 (#352) ? #353 ? P4/B5 (#354) ? P1/D3-a (#355) ? P6a/Q3 (#356). Status ? IN PROGRESS.
- `2026-06-24` ? \*\*Round 2.\*\* Quick wins (#358 Q4, #359 Q5, #360 Q6 isort, #361 Q8) ? Tier 1 (#362 Q2+D11) ? Tier 2 (#363 B6) ? Tier 3+4 (#364 D12+B3+O5). 11 items shipped total.
- `2026-06-24` ? \*\*Round 3.\*\* P2/D3-b segmenters (#366) + P3/D3-c extra='forbid' (#367). 18 items shipped.
- `2026-06-24` ? \*\*Round 4 (final).\*\* P5/D2 app-factory (#370) + test fixes (#371). Status ? PHASE 1 COMPLETE. Suite 1463/1463 green. §8.1 added with prioritized Phase 2 pick-up.
- `2026-06-25` ? \*\*§8.1 reconciled with the §6 source-of-truth (docs-only).\*\* Removed three already-shipped items that §8.1 still listed as deferred future work ? D4/P13, O2/P14, Q7/P15 (all merged in #373/#374) ? and split the unfinished half of B2 out of the done P8 into a new \*\*P17\*\* (the provider return contract + the `trajectory\_hybrid`/`gemini\_refine` callers that still drop `metrics["error"]`). Grounded against `loader.py::\_deep\_merge`, `mypy.ini`, `backend/results.py`, and `backend/providers/gemini.py` + its callers. No code change.
- `2026-06-25` ? \*\*Accuracy fixes (docs-only).\*\* (1) §8 DoD P5 said the module globals were "replaced with `app.state`"; corrected ? `create\_app()` \*added\* `app.state` and lifted `job\_worker` from quarantine, but `db\_instance`/`global\_config` remain as a transitional shim and `backend.main` is still mypy-quarantined (`backend/main.py:264`, `mypy.ini`). (2) `main.py` size "~1300" ? "1450" (now 1448 lines) in §3b/§6/§8.1.
- `2026-06-25` ? \*\*P17 done (B2 finish).\*\* The 4 callers that dropped provider error metrics (`trajectory\_hybrid.py`, `yolo\_hybrid.py`, `gemini\_refine.refine\_window`, `gemini\_refine.full\_video\_rallies`) now check `metrics["error"]` and log loudly instead of silently treating a provider failure as "0 rallies" ? matching the pattern the `gemini` segmenter already uses. (`yolo\_hybrid` was caught during PR #378 review ? it bound `metrics` but never read it.) Suite 1484/1484 green; ruff + mypy clean. Follow-up: migrate the hybrids' `process\_video` return type from bare `List[Dict]` to the ABC `Result[...]` contract (motion.py is already migrated; hybrids suppressed with `type: ignore[override]` for now).
- `2026-06-25` ? \*\*P9 done (B1 finish).\*\* Removed fabricated `random` data from the motion segmenter ? server/receiver/shot\_count/avg\_speed\_kmh ? `None`, serve/smash/foul/winner events dropped entirely (motion was the only `add\_event` caller). PR #385 review caught a real regression: `run\_process\_and\_stitch.py` crashed on `None >= min\_shot\_count` (the `.get(?, 0)` default no longer applied) ? fixed with a None-guard matching the API path. Suite 1492/1492 green; ruff + mypy clean.
- `2026-06-26` ? \*\*P12 CI fix (#386).\*\* The D13/P12 PR failed the `full-suite` lane with

`ModuleNotFoundError: No module named 'trackers'`. Two root causes: (1) the two new tests hard-imported the standalone `trackers` package, but it's a git-only dep (PyPI wheel is metadata-only ? roboflow/trackers#474) deliberately omitted from `pyproject.toml`, and the lane installs via `pip install -e .[dev]`; (2) the git ref `@v2.5.0` was wrong ? roboflow/trackers uses bare version tags (`2.5.0`), so pip failed with `pathspec 'v2.5.0' did not match`. Fixes: added a `pip install trackers @ git+?@2.5.0` step to both `ci.yml` and `nightly.yml` full-suite lanes (same out-of-band pattern as torch); fixed the tag in `requirements.txt`; and guarded the package-importing test with `pytest.importorskip("trackers")` (matching the repo's `obsreport` soft-dep convention). All 10 CI checks green.

198:| **\*\*P10\*\*** | **\*\*D1: Split `main.py` god-module\*\*** (~1450 lines ? smaller modules) | P7 | No | ? | ? |

221:- [X] P5: `create\_app()` injects shared state via `app.state` (handlers read `request.app.state`); `backend.api.job\_worker` removed from mypy quarantine. (The Optional module globals `db\_instance`/`global\_config` are **\*\*retained as a transitional back-compat shim\*\*** and `backend.main` stays mypy-quarantined ? full removal is follow-up, see D1/P10.)

247:| 5 | **\*\*D1 / P10\*\*** | Split `main.py` god-module | ~1450 lines. D2 (app-factory) was the necessary precursor ? now done. Extract: CLI handlers ? `backend/cli/`, upload routes ? already in `backend/api/uploads.py`, debug helpers ? `scripts/`. |
