You are an adversarial verifier in a tech-debt audit. Your default stance: REFUTE. Today is 2026-07-02.

A finder claims the following about the repo at C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector:

```
{  
  "title": "CI is pytest-only: no ruff/mypy/coverage gate, and default ruff already fails with 24 errors",  
  "category": "ci-infra",  
  "severity": "P2",  
  "file": ".github/workflows/ci.yml",  
  "line": 21,  
  "evidence": ".github/workflows/ci.yml:21 runs only 'python -m pytest -q' on python-version 3.11 (line 15); no lint, type-check, or coverage step. pyproject.toml:28-31 ships pytest-cov as a dev dep but CI never uses it; there is no ruff/mypy config anywhere (grep of pyproject.toml + workflows = no hits). `ruff check src tests cleanup.py` (ruff 0.15.16, default rules) currently reports 24 errors: ~20x F401 unused-import (e.g. tests/test_parser.py:1, tests/test_reporting.py:3), 4x F841 (e.g. src/crawlers/badminton_crawler.py:107 `is_commercial`, :148 `rallies_merged` assigned-never-used), 2x E402. README.md:136 advertises '~87%' coverage but nothing enforces a floor (archived CODE_HEALTH_PLAN header says the sweep ended at 82%). Contrast: the engine repo gates ruff+mypy+coverage in CI, and the owner's own pre-LGTM convention assumes lint/type checks 'matching the repo's CI'.",  
  "proposed_fix": "One small PR: (1) fix the 24 ruff findings (20 auto-fixable via --fix), (2) add [tool.ruff] to pyproject.toml, (3) add 'ruff check .' and 'pytest --cov=src --cov-fail-under=<current%>' steps to ci.yml. Optionally add a 3.9 job since requires-python >=3.9 is claimed but only 3.11 is tested.",  
  "effort": "M",  
  "tracked_in": ""  
}
```

Repo root candidates: C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer, C:/Users/avidu/Projects/khelsutra-guru/khelsutra, C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector, C:/Users/avidu/Projects/khelsutra-guru/rally-annotator, C:/Users/avidu/Projects/khelsutra-guru/sports-obsreport (pick from the finding's repo field; non-git dirs: 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup', C:/Users/avidu/Projects/khelsutra-guru/khelsutra-screencast).

VERIFY against the CURRENT working tree (just pulled to origin master/main): (1) does the cited code actually exist and behave as claimed at file:line? (2) was it already fixed by a recent commit (git log --oneline -15 -- <file>)? (3) is the severity honest - construct the concrete failure scenario or downgrade; (4) is the proposed fix sane and correctly scoped; (5) is it owner-gated per: alpha/serving go-live, Studio P10/P11 corpus-promotion/training, product/strategy/licensing, real cloud spend, counsel ToS/DPA?

HARD RULES: READ-ONLY (no file modifications, no installs, no test-suite runs). gh read-only commands allowed. Your reasoning MUST cite file:line you actually read. CONFIRMED requires you

personally saw the defect/debt in current code; if you cannot reproduce the claim from the code, say REFUTED; if a commit fixed it, ALREADY_FIXED.

help: Remove unused import: `os`

Found 24 errors.

[*] 20 fixable with the `--fix` option (2 hidden fixes can be enabled with the `--unsafe-fixes` option).

8. assistant (2026-07-02T03:03:27.481Z)

24 errors confirmed, 20 fixable, on ruff 0.15.16 ? exact match. Let me verify the breakdown and the specific F841/E402 claims.

9. user (2026-07-02T03:03:29.874Z)

```
19      F401      [*] unused-import
