1. user (2026-07-02T03:01:58.566Z)

You are an adversarial verifier in a tech-debt audit. Your default stance: REFUTE. Today is 2026-07-02.

A finder claims the following about the repo at C:/Users/avidu/Projects/khelsutra-guru/khelsutra (avidullu/khelsutra) ? SPA web/ + marketing site/:

```
{  
  "title": "NEXT_STEPS.md was refreshed 2026-07-01 but still advertises the retired droplet host  
as 'live + browsable'",  
  "category": "doc-rot",  
  "severity": "P2",  
  "file": "khelsutra/NEXT_STEPS.md",  
  "line": 12,  
  "evidence": "NEXT_STEPS.md:5 says 'updated 2026-07-01' yet :12-13 states the Node+SQLite host  
is 'live + browsable on the D0 droplet ? http://168.144.126.176:8787 (systemd khelsutra-site)' ?  
six days after the droplet was decommissioned (commit 5ffb750, 2026-06-25). :61-64 still queues  
'Droplet ? production ? TLS + a subdomain (vm.khelsutra.guru)' and 'Revoke the droplet SSH key  
(~/ssh/khelsutra_droplet) when done' as if the box exists. deploy/droplet/README.md remains  
pre-baked for the same IP.",  
  "proposed_fix": "Refresh NEXT_STEPS.md 'Where we are': drop the live-droplet claim, retire the  
'Droplet ? production' queue item (or re-scope it to 'any future VM' ? site/scripts/provision-  
vm.sh is already provider-agnostic), and keep the SSH-key revocation as an explicit still-  
actionable item. Mark deploy/droplet/README.md as a historical template.",  
  "effort": "S",  
  "tracked_in": ""  
}
```

Repo root candidates: C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer,
C:/Users/avidu/Projects/khelsutra-guru/khelsutra, C:/Users/avidu/Projects/khelsutra-guru/sports-
data-collector, C:/Users/avidu/Projects/khelsutra-guru/rally-annotator,
C:/Users/avidu/Projects/khelsutra-guru/sports-obsreport (pick from the finding's repo field;
non-git dirs: 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup',
C:/Users/avidu/Projects/khelsutra-guru/khelsutra-screencast).

VERIFY against the CURRENT working tree (just pulled to origin master/main): (1) does the cited
code actually exist and behave as claimed at file:line? (2) was it already fixed by a recent
commit (git log --oneline -15 -- <file>)? (3) is the severity honest - construct the concrete
failure scenario or downgrade; (4) is the proposed fix sane and correctly scoped; (5) is it
owner-gated per: alpha/serving go-live, Studio P10/P11 corpus-promotion/training,
product/strategy/licensing, real cloud spend, counsel ToS/DPA?

HARD RULES: READ-ONLY (no file modifications, no installs, no test-suite runs). gh read-only
commands allowed. Your reasoning MUST cite file:line you actually read. CONFIRMED requires you
personally saw the defect/debt in current code; if you cannot reproduce the claim from the code,
say REFUTED; if a commit fixed it, ALREADY_FIXED.

```

1      # Next steps (live) ? KhelSutra brand / site
2
3      Prioritized "what to do next" for the `khelsutra` product repo1. Refresh at each
checkpoint.
4
5      **Where we are (updated 2026-07-01):** `khelsutra.guru` is **LIVE and fully shipped2 ?
landing page + `capture`
6      checklist + OG image + a **segmented Request-Access form** (academy/individual + GPU +
storage + free
7      text). On **Cloudflare** (Worker `hidden-king-khelsutra` + D1 `khelsutra-access`): the
form persists to
8      D1 **and emails a summary to the owner on every registration** (Email Routing send
binding ? verified
9      live). **Git auto-deploy is connected** (Workers Builds, root `site/`): merge to
`master` ? deploys;
10     **CI gates every PR** ? three jobs: the full site `npm test` (Worker + VM host + assets
+ UX), the
11     `web/` SPA build + coverage floor, and a real-browser layout check. The same form also
runs on a
12     dependency-free **Node + SQLite** host (`site/server.js`), **live + browsable on the DO
droplet ?
13     http://168.144.126.176:8787** (systemd `khelsutra-site`). Shipped across ~90 merged PRs
(the form,
14     6-language localization, the per-rally MVP, droplet portability). Docs:
15     `docs/REQUEST_ACCESS_FORM.md`, `docs/PORTABILITY.md`.
16
17     ## Next product threads (owner ideas, 2026-06-20)
18     - **? DONE ? Friendly & Multilingual (ARCHIVED 2026-06-22; human gates cleared):** the
product is
19     non-tech-friendly and **fully localized to all 6 languages** (en/kn/hi/es/da/id)
across both surfaces
20     (`web/` SPA + `site/` marketing) ? including the home page (hero, all sections, the
`#join` access form,
21     footer), the **Privacy Policy** page, **per-page ``s**</b>, and <b>**es/da/id academy</b>
<b>flyers**</b> (with
22     localized SPA screenshots). The responsive header is fixed and a <b>**headless-Chromium</b>
<b>CI suite**</b> guards
23     layout, cross-locale render (live DOM == catalog), and <b>**accessibility (axe-core WCAG</b>
<b>2.1 AA)**</b>. Full
24     record: <b>**`docs/archives/FRIENDLY_AND_MULTILINGUAL.md`**</b>. Post-archive PRs: #86 (own-
model) · #87 (es/da/id
25     site) · #105 (form+footer + render guard) · #106 (Privacy page) · #107 (a11y fixes +
axe guard + page
26     titles) · #109 (flyers). <b>**Owner gates CLEARED:**</b> native-speaker review of the AI-
drafted catalogs ? +
27     real-device font-glyph eyeball ?. <b>**Remaining (small/owner):**</b>
28     - <b>**Delta native-review**</b> of the strings ADDED after the owner's sign-off
(<b>#105/#106/#107/#109</b> ? the
29     form/footer/privacy/title/flyer copy is AI-drafted): a small top-up review before a
wide public launch.
30     - <b>**B7 (deferred, not a v1 blocker):**</b> engine backend customer-facing l10n (report
<b>`customer_`</b> +
31     rejection reasons) ? cross-repo Python (<b>`badminton-highlight-indexer`</b>), owner-gated
<b>**D-BACKEND-DEPTH**</b>.
32     - <b>**Marketing video on the site**</b> ? embed a short walkthrough of the record ? index ?
reel process,
33     themed for <b>**serious enthusiasts**</b>, on the landing page. ? <b>**A real-UI CUJ screencast</b>
<b>now exists**</b>
34     (Playwright recording of the per-rally SPA driven against real GPU-run data ?
<b>`promo_cuj.mp4/`.`.gif`</b>
35     in <b>`gs://khelsutra-rally-corpus/promo/`</b>). Decide: use it as the marketing clip (?
shows real court
36     footage + a dev "P5" badge ? clean up before public embed), and/or produce a polished
Grok/Gemini cut.
37     - <b>**Interactive per-rally selection**</b> (big product feature) ? ? <b>**MVP / M0 COMPLETE**</b>
</pre>
</div>
```

```

(the full
38     pick ? query ? select ? compile ? download loop on existing engine endpoints). Lives
in the alpha SPA
39     (`web/`). **? Tracked design + P-tracker (source of truth):
`docs/PER_RALLY_SELECTION.md` (IN PROGRESS;
40     owner-approved, D8?D11 locked).** **Done: P0 design (#11), P1 scaffold (#14), P2
grid+hook (#21), P3
41     `parseQuery()` query bar (#28), P4 SelectionFooter + `min_shot_count` warning (#30),
P5 real load +
42     Build?compile?preview?download (#31).** Verified e2e vs a stub engine + a CUJ replay
against the real
43     L4-run rallies + reel. **NEXT (owner-gated, engine repo): M1?M5** ? `GET /api/health`
+ `download_url`
44     (P6), RESTful `~/rallies` alias (P7), multi-video home + auth (P8), per-rally
preview/timeline (P9),
45     corpus correction loop (P10), localized NL (M5). **Optional:** a fresh live
`/api/process` GPU
46     inference once the engine session's M2 training frees the single GPU.
47
48     ## Queued (site polish)
49     - **Always-Use-HTTPS + HSTS** (Cloudflare SSL/TLS) ? closes the plain-HTTP flag.
50     - **Cloudflare Web Analytics (owner-gated; FREE)** ? code side DONE (the dead
placeholder beacon was
51     removed from `site/public/index.html`; analytics is now via **Automatic Setup**, no
in-source token).
52     **Owner step (needs CF login):** the site is a Cloudflare **Worker** (not Pages) on
the proxied
53     `kheIsutra.guru` zone ? enable via **Analytics & Logs ? Web Analytics ? Add a site ?
`kheIsutra.guru`**
54     (Automatic Setup is default-on for proxied hostnames; edge-injects the beacon on every
page). Then
55     filter the view to `hostname = kheIsutra.guru` to exclude `*.pages.dev`/preview noise,
and decide
56     separately whether `app.kheIsutra.guru` (the SPA) needs its own enablement (history-
router only).
57     **Verify (two gotchas):** the Worker's asset responses must NOT send `Cache-Control:
?, no-transform`
58     (Cloudflare can't rewrite that ? no injection), and after a deploy the rendered HTML
should contain the
59     edge-injected beacon. **DONE WHEN:** the Web Analytics dashboard shows incrementing
page views for
60     `kheIsutra.guru`.
61     - **Droplet ? production** ? TLS + a subdomain (`vm.kheIsutra.guru` via Caddy) if it
should be a real
62     standby; add **VM-path SMTP** so the Node host also emails (currently `noopNotify`).
63     - **DMARC** TXT for deliverability; delete any orphan `kheIsutra-site` Worker; clean CF
D1 test rows
64     (`deploy-test@`, `email-test@`). Revoke the droplet SSH key
(`~/ssh/kheIsutra_droplet`) when done.
65
66     ## Bigger arcs (design-first)
67     - **? Studio media lifecycle (ingest ? store ? annotate ? train)** ? **Tracked project:
`docs/STUDIO_MEDIA_LIFECYCLE.md`
68     (IN PROGRESS ? storage half COMPLETE 2026-07-01).** The seamless flow: add a video ?
store it in a user-chosen medium
69     (S3/GCS/Drive/local) ? free-space checked ? annotate in-UI ? contribute to the
segmenter. **SHIPPED 2026-07-01:**
70     free-space guards (vault + engine, P1/P2), the `/api/capabilities` storage block (P3),
`POST /api/assets`
71     store-into-medium (P4), the SPA medium picker (P5), the "my videos" library (P6), and
in-UI annotation (P7?P9).
72     **Remaining = owner-gated only:** P10 (corpus promotion) + P11 (train/re-eval ?F1) +
the `L` beta follow-ups.
73     S7 tracker is the source of truth.
74     - **Single-box appliance (KheIsutra Studio)** ? **? Tracked design:

```

```

`docs/LOCAL_APPLIANCE_ARCHITECTURE.md` (DRAFT, owner-gated).**
75     The `web/` SPA drives the full **ingest (Drive / bucket URI / local upload) ? index ?
pick rallies ? reel ? download**
76     loop on ONE box, behind an **edge auth gate** (engine stays `127.0.0.1`, CORS `` is
moot). It is the single-box
77     profile of the engine's decoupled `StorageBackend` + `backend.worker` architecture.
MVP runs on the CPU droplet via
78     **Gemini/stub** ; **real local-GPU detection needs a GPU host** (DO droplet / GCE VM /
Cloud Run+GPU ? owner priority
79     ASAP, runs parallel to the UI MVP). Per-rally selection = one screen. Owner decisions
pending in §10 (edge auth,
80     retention, cost ceiling, GPU host, P5 bridge).
81     - **Alpha SPA** in `web/` (Vite + React + TS + Tailwind) ? hosts the operator console +
the per-rally selection UI above.
82     - **BYO-storage + autosync** ? connect Drive/OneDrive/GCS/S3, watch the folder, auto-
prepare reels
83     (engine `PLATFORM_ARCHITECTURE.md §3`). The form's GPU/storage answers are the demand
signal.
84     - **Control plane** (`control-plane/`) at beta.
85
86     ## Org & repos
87     - ? **DONE (2026-06-20): proprietary repos consolidated into the `Khelsutra` org
(private).** Transferred
88     `badminton-highlight-indexer` (engine), `sports-data-collector`, `sports-obsreport` ?
`Khelsutra/` (stay private; no
89     open PRs/forks; GitHub redirects git ops so active sessions kept working; local
remotes repointed + verified).
90     `rally-annotator` stays in the org **PUBLIC** (OSS MIT plugin the site links to ? do
not make private). Owner is org
91     admin (full access) and can **invite a contributor** (org member / per-repo outside
collaborator) anytime.
92     - ? **`khelsutra` (this site repo) ? owner step pending.** A transfer breaks the
**Cloudflare Workers-Builds** git
93     connection (auto-deploy) until the Cloudflare GitHub App is installed on the
`Khelsutra` org and the Worker
94     reconnected (dashboard). When ready: install the CF app on the org ? `gh api
repos/avidullu/khelsutra/transfer -f
95     new_owner=Khelsutra` ? reconnect the Worker to `Khelsutra/khelsutra` ? verify a
deploy.
96     - ? **Engine CI under the org** ? verify the engine's GitHub Actions run on the next PR
(free orgs default Actions-on;
97     enable in org settings if a run doesn't start).
98
99     ## Convention
100    Substantial work gets a tracked doc in `docs/`; one PR per item off `origin/master`;
merge to `master`
101    auto-deploys (CI must be green).
102

a7214ad 2026-06-20 fix(site): serve .mp4 as video/mp4 on the Node host so the tool screencast
plays (#35)
ec6a5d8 2026-06-20 feat(site): after sign-up, reveal the tool in action + a 30s reel; coherent
join CTA (#34)
d537d19 2026-06-20 feat(web): per-rally MVP P3 ? deterministic parseQuery() query bar (traced +
adversarially hardened) (#28)
cc5cd4d 2026-06-20 fix(ops): force LF in git archive (core.autocrlf=false) so Windows operators
don't CRLF-drift a fresh VM (#19)
23e2104 2026-06-20 feat(ops): provider-portable VM provisioning + teardown (destroy -> resume
anywhere), tested live (#16)
fbffa2b 2026-06-20 docs(appliance): single-box UI-powered indexer + reel generator (KhelSutra
Studio) (#13)
```

eeb8a48 2026-06-20 ci(site): add deploy-config + static-asset guards and a live-parity workflow (#12)
0f555ad 2026-06-20 fix: deterministic LF line endings + live-parity check (droplet vs Cloudflare drift) (#10)
===

The scheduled `live-parity` workflow compared the Cloudflare-served site (canonical, auto-deployed from git) against a second live copy on the DigitalOcean droplet `168.144.126.176:8787`. That droplet has been decommissioned (its data archived to `gs://khelesutra-rally-corpus/archive/droplet-claude-do-rally-test-20260625/`), so the monitor has nothing to compare against and fails every night.

Remove the workflow and its only consumer, `parity-check.sh`. Cloudflare is now the single canonical host. `test.yml`'s ops-script check globs `scripts/\*.sh`, so dropping the script doesn't affect it.
