1. user (2026-07-02T04:57:58.235Z)

You are an adversarial code reviewer. Today is 2026-07-02. Review PR #56 in the repo at C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector (gh pr view 56, gh pr diff 56; the working copy is in worktree C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-highlight-indexer/c1fcb4aa-537d-41fd-858e-53f93349bf5a/scratchpad/wt-roora-goldens ? read code there for context).

The PR claims to fix: R2-7 (Roora single-copy paid artifacts) (evidence in C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-highlight-indexer/c1fcb4aa-537d-41fd-858e-53f93349bf5a/scratchpad/AUDIT_REPORT_khelsutra-guru_2026-07-02.md ? Grep for the IDs; honor the verifier notes' scoping corrections).

Hunt REAL defects: correctness bugs in the diff, broken/vacuous tests, behavior changes beyond the brief, staging accidents (files that should not be in the diff ? check the file list!), convention violations (default-ON when brief says OFF, missing schema-version check, CWD assumptions), and whether the fix actually addresses the finding. READ-ONLY ? do not modify or comment on GitHub. blocker = must not merge; major = fix before merge; minor = nice-to-have.

2. user (2026-07-02T04:58:10.888Z)

```
title: feat(data): git-version the Roora pilot golden label CSVs (R2-7)

What / why

Audit finding ****R2-7**** (2026-07-02): the paid Roora vendor pilot's work product ? the human-corrected golden labels and the raw CVAT deliverables ? existed as a ****single unversioned copy**** under the non-git `Annotation Setup` folder. One C: disk failure or folder cleanup would silently destroy the only record of the paid pilot: the frame-by-frame badminton review (rally 2 start corrected 0:02.50370:29, rally 7 end 1:5171:38, vendor-missed rallies 7.5/16.5 added, winner?out fixes) and the pickleball/table-tennis goldens backing the recorded TT-0.909 / PB-0.308 multi-sport transfer results (see the indexer's `docs/NEXT\_STEPS.md`).

This PR git-versions the small distilled goldens, following the repo convention that the small source annotation CSVs are version-controlled under `data/` (like

`data/roora\_badminton\_canonical.csv`, which remains the *as-delivered* vendor parse ? the corrections here exist nowhere else in git):

- `data/golden\_labels/golden\_labels\_badminton.csv` ? human review/corrections record (verbatim copy).
- `data/golden\_labels/pickleball\_rallies.csv`, `data/golden\_labels/tabletennis\_rallies.csv` ? golden rally sets in the canonical per-rally CSV schema (verbatim copies of `Annotation Setup/Trajectories/roora/\*`).
- `data/golden\_labels/README.md` ? per-file provenance + pointer to the full pilot archive.
- `tests/test\_golden\_labels\_data.py` ? guards the goldens: pb/tt load via `load\_canonical\_csv` with zero skipped rows (6 rallies each), and the badminton file keeps its key human corrections (rally 2 start=29.000, rally 7 end=98.000, 7.5/16.5 present).

****Companion GCS archive (done outside this PR, user-approved):**** the complete pilot record was uploaded to `gs://khelsutra-rally-corpus/archive/roora-pilot-review-20260606/` ? 739 objects, 5,731,641 bytes, verified: raw CVAT exports for all 3 sports (badminton per-frame XMLs, pickleball/tabletennis zips), `rally\_review.csv`, pilot review reports (MD/PDF), annotation brief/guide, and `Trajectories/roora/`. The 3 pilot ****videos were excluded**** (byte-identical copies verified on the owner's Google Drive per the audit).

Verification

Ran locally (Windows, worktree off `origin/master` @ adcd206):

- `python -m pytest tests/test\_golden\_labels\_data.py -q` ? 3 passed
- `python -m pytest tests/test\_cvat\_parser.py tests/test\_cvat\_robustness.py -q` ? 38 passed (the loader the new test depends on)
- `ruff check tests/test\_golden\_labels\_data.py` ? clean (no repo ruff/mypy config exists)
- GCS archive verified: `gcloud storage ls -r` listing diffed byte-for-byte against the local staging list (739/739 names identical) and `gcloud storage du -s` = 5,731,641 B remote == local; per-prefix: Archive/ 5,626,913 B, Trajectories/ 100,843 B, golden_labels_badminton.csv 2,508 B, rally_review.csv 1,377 B.

CI covers: full `pytest -q` suite on ubuntu / Python 3.11.

+# Golden rally labels (Roora pilot, June 2026)
+
+Human-verified golden rally labels produced from the **Roora vendor annotation
+pilot** (badminton pilot review 2026-06-06; pickleball & table-tennis review
+2026-06-10). These are the corrected/curated counterparts to the *as-delivered*
+vendor parse tracked at
+[`data/roora_badminton_canonical.csv`](../roora_badminton_canonical.csv),
+and they back the recorded multi-sport transfer results (table-tennis WASB
+F1 0.909; pickleball 0.308 ? see the indexer's `docs/NEXT_STEPS.md` /
+`docs/RALLY_DETECTION_QUALITY_REPORT.md`).
+
+| File | Video | What it is |
+| --- | --- | --- |
+| `golden_labels_badminton.csv` | Sample Long Video - Baadminton.MP4 | Frame-by-frame human
+review of the vendor's badminton delivery. The `status` column records the verdict per rally:
+`CONFIRMED`, `needs_review`, `CORRECTED-*` (start/end/ending fixed vs the vendor CSV), `MISSED-
+added` (rallies 7.5 and 16.5, absent from the delivery). Two rows intentionally have open fields
+(7.5 has no end time; 16/16.5 have no shot counts) ? this is a review-corrections record, not an
+import-ready canonical CSV: `load_canonical_csv` skips the non-integer `rally_number` rows
+(7.5/16.5) by design. |
+| `pickleball_rallies.csv` | Video 2 - Pickleball.mp4 | Golden rally set in the canonical per-
+rally CSV schema (6 rallies). Loads cleanly via
+`src.parsers.cvat.rally_cvat.load_canonical_csv`. |
+| `tabletennis_rallies.csv` | Video 3 - Tabletennis.mp4 | Golden rally set in the canonical
+per-rally CSV schema (6 rallies). Loads cleanly via `load_canonical_csv`. |
+
+### Provenance & full archive
+
+These CSVs are the distilled work product of the paid Roora pilot. The complete
+pilot record ? raw CVAT exports for all three sports (per-frame box geometry the
+canonical CSVs discard), the `rally_review.csv` calibration sheet, the pilot
+review reports (MD/PDF), and the annotation brief/guide ? is archived at:
+
+```
+gs://khelsutra-rally-corpus/archive/roora-pilot-review-20260606/
+```
+
+(739 objects, ~5.7 MB; mirrors the local `Annotation Setup/` relative layout:
+`Archive/Roora Pilot Review - 6 June 2026/` minus the videos,
+`Trajectories/roora/`, `golden_labels_badminton.csv`, `rally_review.csv`.)
+
+The three pilot **videos** are deliberately *not* in the archive ? byte-identical
+copies live on the owner's Google Drive under
+`Sharing/Annotation Videos/Pilot Videos/`.
+
+Guarded by `tests/test_golden_labels_data.py` (schema + key corrections stay
+intact).
```
