You are an adversarial verifier in a tech-debt audit of the multi-repo workspace at C:/Users/avidu/Projects/khelsutra-guru (repos: badminton-highlight-indexer, khelsutra, sports-data-collector, rally-annotator, sports-obsreport; non-git dirs 'Annotation Setup', khelsutra-screencast). Today is 2026-07-02. All repos are at origin head.
Default stance: REFUTE. A round-1 finder claimed (UNVERIFIED):
REPO: badminton-highlight-indexer
CLAIM: Engine CLAUDE.md 'Current state' section is ~3 weeks false ? claims platform/owned-model work 'has not started'
INVESTIGATION HINTS: Read CLAUDE.md current-state claims vs git log reality; assess what a fresh session would wrongly conclude.
VERIFY against the CURRENT working tree: (1) reproduce the defect/debt from actual code at file:line; (2) check git log for a fix that already landed; (3) construct the concrete failure scenario or downgrade severity; (4) propose the correctly-scoped fix with effort S/M/L; (5) flag OWNER_GATED if it needs owner decisions (real cloud spend, product/strategy, counsel, Cloudflare dashboard).
HARD RULES: READ-ONLY ? no file modifications, no installs (pip download/index checks and WebFetch to pypi.org are OK), no test-suite runs. gh read-only OK. sqlite reads OK. CONFIRMED requires you personally observed the defect in current code/data; cite file:line for every claim.

1      # CLAUDE.md ? project memory / agent handoff  
2  
3      Local, AI-powered **badminton (? racket-sports) highlight indexer + rally detector**:  
4      FastAPI + SQLite + ffmpeg + GPU CV/AI, with paid **Gemini** as the cloud AI. Sibling  
5      repos: `sports-data-collector`, a VLC-based `rally-annotator`.  
6  
7      ## Read these first  
8      - **`docs/README.md`** ? doc index. **`docs/CODE_MAP.md`** ? code navigation + data  
9      contracts (the cold-start map; read before touching code).  
10     - **Authoritative owned-model roadmap:** `docs/OWNED_MODEL_IMPLEMENTATION_PLAN.md` (+  
the  
11     live `docs/NEXT_STEPS.md`). These SUPERSEDE the 2026-06-07 strategy docs below where  
they
```

```

12     disagree (licensing, Gemma-4 stance, base model, conversational-QA).
13     - **Strategy (post-scaffolding):** `docs/COMMERCIALIZATION.md`,
14       `docs/PMF_MARKET_RESEARCH.md`,
15       `docs/PLATFORM_ARCHITECTURE.md`, `docs/DEFERRED_HARDENING_PLAN.md`. Also
16       `docs/ROADMAP.md`
17       (offline-segmenter narrative) and `docs/BACKLOG.md`.
18     - **Rally-detection quality track (design merged 2026-06-13, owner-gated, implementation
in progress):**
19       `docs/HOW_RALLY_DETECTION_WORKS.md` (2-layer mental model) ?
20       `docs/MULTI_SIGNAL_FUSION_PLAN.md`
21       (fuse shuttle + person + audio cues; the held-shuttle bug is the already-built
22       `rally_gate.py`
23       "Gate A" **not wired into production** ? cheapest win) ? `docs/EXPERIMENT_HARNESS.md`
24       (A/B + shadow
25       eval so cues land flag-gated/default-OFF with zero regression) ?
26       `docs/ROORA_LABELING_GUIDELINES.md`
27       (v8 vendor labeling spec). **`docs/NEXT_STEPS.md` has the prioritized pick-up for this
track.**
28     - **History:** `docs/archives/` ? ADRs (`decisions/DECISIONS.md`), research, and
29       **`checkpoints/` (latest: `2026-06-strategy-foundation/`). **Archive policy:** only
30       move
31       **terminal-state** (DONE/REJECTED) work; live docs stay at `docs/` top level ? and
32       **before
33       archiving, HONESTLY update the doc first** (verify claims vs code ? flip status + a
34       completion
35       note ? update inbound refs ? keep the lineage ? then `git mv`), per the checklist +
36       living
37       lifecycle register in **`docs/DOC_STATUS.md`**.
38
39     ## Current state (June 2026)
40     - **Scaffolding complete**; strategy foundation + owned-model roadmap merged. **No
41       platform/owned-model implementation has started.** A 2026-06-10 audit-driven hardening
42       sweep landed (licensing gate, detector keying, re-ingest safety, config, eval gate,
43       API
44       validation, reliability, CI + test coverage) ? see git history.
45     - **Two tracks, both owner-gated:** the **committed next PLATFORM slice = async job
46       model**
47       (`DEFERRED_HARDENING_PLAN.md` #16, single-tenant); the **owned-model track** starts at
48       a
49       greenlit Phase-0 milestone (`OWNED_MODEL_IMPLEMENTATION_PLAN.md`). **Do not start
50       implementation without explicit owner approval.**
51
52     ## Architecture in one breath
53     - **Pluggable registries** (ABC + `Registry` singleton): segmenters / providers /
54       validators
55       / sports / annotations ? see `backend/pipeline/segmenters/base.py`. **Future:**
56       `StorageBackend` + `ComputeBackend` registries (PLATFORM §3).
57     - `video_id` = MD5 of the file ? `backend/utils/hashing.py::compute_video_id` (one
58       helper).
59     - Typed config = `backend/config/` (Pydantic). DB schema evolves via the `PRAGMA
60       user_version` migration ladder in `backend/infrastructure/database.py`.
61
62     ## Committed guardrails (non-negotiable)
63     - **Paid LLMs (Gemini/OpenAI/Anthropic) = inference / serving / fallback ONLY ? never a
64       training data source** (terms/copyright). Commercial-clean licensing for EVERY
65       dependency ?
66       code, data, AND weights: **MIT / Apache-2.0 / BSD only** (ratified 2026-06-09, owner-
67       agreed).
68     - **Owned-model base:** **Qwen3-VL (Apache-2.0)** primary, InternVL3 (MIT) fallback;
69       **Gemma-4
70       is AMBER / bench-only** (Apache grant likely but Prohibited-Use posture unconfirmed ?
71       counsel
72       needed; do NOT build on it without sign-off). **Reject Gemma 3** (viral license).
73       **Exclude
74       minors** from the training pool; per-user training data needs a separate explicit opt-

in.
55     - **v1 = rally + highlight + history + correction loop**; **gait/biometrics strictly
future**
56     (GDPR Art. 9).
57     - **Generic data schema**; `coach ? athlete` is an **optional overlay**, not baked in.
58     - **Compute = GCP ONLY (ADR-013, 2026-06-20)**: GPU training + serving run on **GCP**
(`deploy/gcp/`;
59     Cloud Run+GPU for serving per ADR-012). **DigitalOcean is DROPPED for compute** (DO
GPU not enabled
60     on the account + not cleanly credit-funded; Paperspace is subscription-gated). Don't
re-evaluate
61     DO/Paperspace for compute without a new ADR; the `$200` DO credits go to **non-compute
only**. The
62     `deploy/digitalocean/` scripts are kept solely as provider-agnostic Linux-GPU setup
reused by GCP.
63
64     ## Workflow conventions
65     - **Branch off `master`; ONE PR per work item; NO PR stacking.** Don't open a PR unless
asked.
66     - Tests: `python run_all_tests.py` (offline, fully mocked). Python 3.10+ (the `trackers`
package requires ?3.10); `ffmpeg` required.
67     - Never push to the default branch directly; descriptive commit messages.
68     - **Substantial design/project work gets a tracked project doc** following
`docs/PROJECT_DOC_TEMPLATE.md` (status header · decisions-locked · progress tracker ·
definition-of-done; archived on completion). Precedents: `docs/RALLY_QUALITY_RESEARCH.md` §7,
`docs/GOLDEN_REGRESSION_FIXTURES.md`.
69     - **Launch / "bit-flip" PRs** (a default-flip that drives a tracked project to terminal
state) MUST, in the SAME PR, run the `docs/DOC_STATUS.md` §2 archival due-diligence on that
project's docs (verify-vs-code ? flip status + completion note ? update inbound refs ? keep ADR
lineage ? `git mv` to `docs/archives/` ? record in DOC_STATUS §3), and fix any internal-link
breakage the move causes. Enforced by `.github/PULL_REQUEST_TEMPLATE.md` + the `link-check` CI
job (`python -m tools.check_md_links`).
70     - ?? Hand the heaviest machine-side checks (real video, the full GPU/WSL/WASB suite) to
the owner,
71     who has the golden corpus + labelled videos; verify pure-logic paths locally.

3fd72325 (Avi 2026-06-08 40) - **Pluggable registries** (ABC + `Registry` singleton): segmenters
/ providers / validators
3fd72325 (Avi 2026-06-08 41) / sports / annotations ? see
`backend/pipeline/segmenters/base.py`. *Future:*
3fd72325 (Avi 2026-06-08 42) `StorageBackend` + `ComputeBackend` registries (PLATFORM $3).

## Workflow conventions
- **Branch off `master`; ONE PR per work item; NO PR stacking.** Don't open a PR unless asked.
-- Tests: `python run_all_tests.py` (offline, fully mocked). Python 3.8+; `ffmpeg` required.
+- Tests: `python run_all_tests.py` (offline, fully mocked). Python 3.10+ (the `trackers`
package requires ?3.10); `ffmpeg` required.

MUST, in the SAME PR, run the `docs/DOC_STATUS.md` $2 archival due-diligence on that project's
docs (verify-vs-code ? flip status + completion note ? update inbound refs ? keep ADR lineage ?
`git mv` to `docs/archives/` ? record in DOC_STATUS $3), and fix any internal-link breakage the
move causes. Enforced by `.github/PULL_REQUEST_TEMPLATE.md` + the `link-check` CI job (`python
