1. user (2026-07-02T03:00:38.389Z)

You are an adversarial verifier in a tech-debt audit. Your default stance: REFUTE. Today is 2026-07-02.

A finder claims the following about the repo at C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer:

```
{  
  "title": "Four more god modules over 800 lines; database.py is a 50-method monolith",  
  "category": "tech-debt",  
  "severity": "P2",  
  "file": "backend/infrastructure/database.py",  
  "line": 25,  
  "evidence": "wc -l over backend/**/*.py: infrastructure/database.py 1,259 (a single Database  
class, database.py:25, with 50 methods spanning every persistence domain ? videos, candidates,  
segments, jobs, annotations, schema migration incl. SchemaTooNewError:21);  
eval/golden_fixtures.py 1,035 (already once split ? golden_real_fixtures.py extracted, with a  
documented lazy re-export cycle golden_fixtures.py:1005-1028); pipeline/detectors/wasb_infer.py  
870; eval/rally_seg_eval.py 849. backend/worker/__main__.py at 748 is just under threshold but  
shares main.py's dict/AppConfig duality and is mypy-quarantined for it (mypy.ini:18-23).",  
  "proposed_fix": "After D1 lands, apply the same treatment to database.py: split by domain into  
repository modules (videos/segments/jobs/annotations) behind the existing Database facade so  
call sites don't churn. Treat golden_fixtures/wasb_infer/rally_seg_eval as opportunistic ? split  
only when next touched. Finish the typed-config migration so worker/__main__ leaves  
quarantine.",  
  "effort": "L",  
  "tracked_in": "mypy.ini comments reference the typed-config migration (D3) in  
docs/CODE_CLEANUP_AUDIT_2026-06-24.md"  
}
```

Repo root candidates: C:/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer,
C:/Users/avidu/Projects/khelsutra-guru/khelsutra, C:/Users/avidu/Projects/khelsutra-guru/sports-
data-collector, C:/Users/avidu/Projects/khelsutra-guru/rally-annotator,
C:/Users/avidu/Projects/khelsutra-guru/sports-obsreport (pick from the finding's repo field;
non-git dirs: 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup',
C:/Users/avidu/Projects/khelsutra-guru/khelsutra-screencast).

VERIFY against the CURRENT working tree (just pulled to origin master/main): (1) does the cited
code actually exist and behave as claimed at file:line? (2) was it already fixed by a recent
commit (git log --oneline -15 -- <file>)? (3) is the severity honest - construct the concrete
failure scenario or downgrade; (4) is the proposed fix sane and correctly scoped; (5) is it
owner-gated per: alpha/serving go-live, Studio P10/P11 corpus-promotion/training,
product/strategy/licensing, real cloud spend, counsel ToS/DPA?

HARD RULES: READ-ONLY (no file modifications, no installs, no test-suite runs). gh read-only
commands allowed. Your reasoning MUST cite file:line you actually read. CONFIRMED requires you
personally saw the defect/debt in current code; if you cannot reproduce the claim from the code,
say REFUTED; if a commit fixed it, ALREADY_FIXED.

2. user (2026-07-02T03:00:47.499Z)

e410136 api: /api/videos surfaces fps + resolution (from the stored ffprobe details) (#413)
81a78bf api: /api/videos returns video_id + a friendly match_name (fix disappearing name) (#412)
8b16cf4 docs: reflect today's storage endpoints + the corpus/user-video boundary (#411)

1001
1002
1003     # =====
1004     # Re-exports ? the real-fixture subsystem (P1 + M2) lives in ``golden_real_fixtures``
    but
1005     # is exposed here so every historical ``golden_fixtures.<name>`` import path stays
    valid.
1006     # =====
1007
1008     #: The names the real-fixture module owns; re-exported lazily (PEP 562 ``__getattr__``)
    so the
1009     #: ``golden_fixtures`` ? ``golden_real_fixtures`` cycle resolves regardless of import
    order ?
1010     #: ``golden_real_fixtures`` imports the shared primitives FROM this module, so an EAGER
    bottom-of-
1011     #: file re-export would fail when ``golden_real_fixtures`` is imported FIRST (its own
    names would
1012     #: not yet be defined when this module's import of them runs). The lazy hook defers the
    import to
1013     #: first attribute access, by which point BOTH modules are fully initialized.

19:[Omitted long matching line]
40:| **D1** | **Phase 1 = pure refactorings only.** No logic or behavior change. All tests must
pass; coverage must not decrease. | Owner, 2026-06-24 | B2 (Success/Failure contract for Gemini)
is deferred to Phase 2 since it changes return types callers depend on. D3 (typed-config
migration), D2 (app-factory), and B5 (segmenter validator) are pure-refactoring-possible and are
the first targets. |
41:| **D2** | **First targets: D3 ? B5 ? D2** in that order (increasing risk). D3 (typed-config
migration) is the safest ? fix the validator callers one module at a time. B5 (segmenter
validator) is a one-liner. D2 (app-factory) is the largest but still a refactoring. B2
(Success/Failure in Gemini) is the first Phase-2 item. | Owner, 2026-06-24 | Each lands via a
separate, small PR branched from `master`; no PR stacking. |
42:| **D3** | **Docs-only PR first.** This document lands as a single PR with no code changes.
The subsequent code PRs reference this doc. | Owner, 2026-06-24 | The doc is approval for the
approach; individual code PRs are approval for the implementation. |
46:| **D7** | **Absorb relevant BACKLOG items.** Deferred hardening items from `docs/BACKLOG.md`
that overlap with this audit are absorbed into this project rather than left in BACKLOG. Items

```

that are feature-gaps (not code-cleanup) stay in BACKLOG. | PR #352 review, 2026-06-24 | D2 and O1 were already independently found; D13 and D14 are new absorptions. The train/eval splits guardrail stays in BACKLOG (it needs a collector-side manifest change). |

69:| **D1** | HIGH | `backend/main.py` | **Massive god-module** (~1450 lines). CLI, API, worker orchestration, upload, debug-clip, trim, reingest all in one file. | 2 |

71:| **D3** | HIGH | `backend/config/models.py` | **Dual config access**. **Typed Pydantic model + legacy** `.get()` dict shim. `extra='allow'` silently keeps typo'd keys. | **1** |

78:| **D10** | LOW | `backend/reporting/spec.yaml` + `harvest.py` | Tight coupling via magic `when.path` strings. Rename a detail ? rule silently stops firing. | 3 |

79:| **D11** | LOW | `backend/pipeline/stitcher/compiler.py` | Two-stage codec contract is implicit. Change a preset ? concat breaks. | 3 |

80:| **D12** | LOW | `tools/generate\_highlights.py` | Uses `sys.path.insert(0, ...)` hack instead of proper package install. | 3 |

81:| **D13** | MEDIUM | `requirements.txt`, `pyproject.toml` | **Absorbed from BACKLOG**. **supervision** ByteTrack is deprecated as of 0.28.0 and **removed in 0.30.0**. The `<0.30.0` pin in `requirements.txt` and `pyproject.toml` is a stopgap ? migration to the standalone `trackers` package is needed before the pin can be lifted. | 2 |

82:| **D14** | LOW | `tests/` directory | **Absorbed from BACKLOG**. **90+ test files in a flat** `tests/` directory. Owner wants reorganization by subsystem (e.g. `tests/eval/`, `tests/audio/`) to reduce fragmentation. The exact grouping metric is the owner's design choice. | 3 |

90:| **O3** | MEDIUM | `backend/infrastructure/database.py` | SQLite WAL + busy_timeout but concurrent writers (CLI + server) risk `SQLITE\_BUSY`. | 3 |

115:| **D13** | "supervision ByteTrack deprecation" | ? ? pinned `<0.30.0` as stopgap; migration to `trackers` package needed | New finding in this doc (see §3b) |

116:| **D14** | "tests/ reorganization to reduce fragmentation" | ? ? owner's design choice on grouping metric needed first | New finding in this doc (see §3b) |

125:### 4a. D3 ? Typed-config migration (first target)

168:- **Does NOT split `main.py` (D1).** **The god-module split is deferred ? D2 (app-factory) is a necessary precursor.**

170:- **A green suite after Phase 1 does NOT mean the code is "clean."** **It means the structural debt targeted by D2/D3/B5 is resolved. The remaining 28 items still need attention.**

183:| **P1** | **D3-a: Convert validators to typed `AppConfig`** (6 files) | P0 | No | ? |
[#355](https://github.com/Khelsutra/badminton-highlight-indexer/pull/355) |

187:| **T1** | **Tier 1: Q2 (motion return type) + D11 (codec docstring)** | P0 | No | ? |
[#362](https://github.com/Khelsutra/badminton-highlight-indexer/pull/362) |

189:| **T3** | **Tier 3+4: D12 (sys.path hack) + B3 (PTS gap config) + O5 (lock note) + D7 (centralize TUNED)** | P0 | No | ? | [#364](https://github.com/Khelsutra/badminton-highlight-indexer/pull/364) |

191:| **P2** | **D3-b: Convert segmenters to typed `AppConfig`** (15 files: 5 segmenters + 4 detectors + worker + eval + tools) | P1 | No | ? |
[#366](https://github.com/Khelsutra/badminton-highlight-indexer/pull/366) |

192:| **P3** | **D3-c: Remove `.get()` compat shim; flip `extra='forbid'`** (18 files, +87/-169) | P2 | No | ? | [#367](https://github.com/Khelsutra/badminton-highlight-indexer/pull/367) |

198:| **P10** | **D1: Split `main.py` god-module** (~1450 lines ? smaller modules) | P7 | No | ? |
| ? |

200:| **P12** | **D13: ByteTrack deprecation** ? migrated `sv.ByteTrack` ? `trackers.ByteTrackTracker` (git dep; PyPI wheel broken) | P7 | No | ? |
[#386](https://github.com/Khelsutra/badminton-highlight-indexer/pull/386) |

205:| **P16+** | Phase 3 items (B4/B7/B8/D5/D6/D8-D10/D14/O3/O4) | P15 | No | ? | ? |

211:1. **Q: Should D1 (split `main.py`) be Phase 1 or Phase 2?** ? **Leaning Phase 2: D2 (app-factory) is a natural precursor, and D1 is lower risk after the globals are gone. Owner to confirm.**

221:- [x] **P5: `create\_app()` injects shared state via `app.state` (handlers read `request.app.state`); `backend.api.job\_worker` removed from mypy quarantine. (The Optional module globals `db\_instance`/`global\_config` are **retained as a transitional back-compat shim** and `backend.main` stays mypy-quarantined ? full removal is follow-up, see D1/P10.)**

246:| ~4~ | ~**D13 / P12**~ | ~ByteTrack deprecation migration~ ? ***** DONE.** **sv.ByteTrack** ? **trackers.ByteTrackTracker** (git dep; PyPI wheel broken ? filed Roboflow issue). |

247:| 5 | **D1 / P10** | Split `main.py` god-module | ~1450 lines. D2 (app-factory) was the necessary precursor ? now done. Extract: CLI handlers ? `backend/cli/`, upload routes ? already in `backend/api/uploads.py`, debug helpers ? `scripts/`. |
