You are a product UX writer for KhelSutra (turns a badminton match into a highlights reel). Refine the copy for the "your upload is too big ? here is how to trim it" help shown after an oversized file is rejected client-side.

Improve on this baseline (keep its structure/keys; sharpen wording):

```
{  
  "message_en": "This clip is {size}, over the {cap} upload limit. Trim it to a shorter  
highlight first, then upload again.",  
  "summary_en": "How do I trim it?",  
  "phone_en": "<b>On a phone:</b> open the clip in your Photos or Gallery app, use the trim  
slider to keep just the part you want, then upload that shorter clip.",  
  "computer_en": "<b>On a computer:</b> open it in Photos on Windows or QuickTime Player on Mac,  
trim to the part you want, and export the shorter clip.",  
  "advanced_en": "<b>Advanced:</b> split it into parts with scripts/chunk_video.py, or store the  
whole video on Google Drive instead of uploading."  
}
```

Your optimization angle: Optimize for a first-time trimmer who has NEVER edited video ? maximize hand-holding and reassurance while staying to one sentence per line.

HARD CONSTRAINTS (a linter enforces these ? violating any FAILS the build):

- Audience: a non-technical BADMINTON COACH who may never have trimmed a video. Warm, plain, actionable. No dev jargon in the coach-facing lines.
- The app runs AIR-GAPPED: NO URLs / links / "search for X online". Only inline instructions and plain tool NAMES.
- Accuracy: only recommend trimming methods that genuinely EXIST and are EASY for a beginner:
 - * Phones: iOS Photos and Android Photos/Gallery both trim video natively ? correct.
 - * Windows: the built-in Photos app trims video ? correct. Mac: QuickTime Player (Edit > Trim) ? correct.
 - * Do NOT recommend VLC for trimming (it has no beginner-friendly trim/export). Do NOT invent features.
- The 'message' string MUST keep EXACTLY the two placeholders {size} and {cap} (verbatim, curly braces), and NO other {braces}. The help strings (summary/phone/computer/advanced) must contain NO {placeholders}.
- HTML: phone/computer/advanced may use ? ONLY (a bold lead-in label). No other tags. NEVER use <code>, <kbd>, <samp>, <tt>, <var>. summary/message use no tags.
- 'advanced' MUST mention scripts/chunk_video.py (plain text, not <code>) and the Google Drive option ? that reference is a required deliverable.
- Keep product/app names verbatim: Photos, Gallery, QuickTime Player, VLC (avoid), Google Drive, scripts/chunk_video.py, Windows, Mac.
- Keep every string to one sentence, concise.

Return the finalized ENGLISH strings for keys: message_en, summary_en, phone_en, computer_en,

advanced_en, plus a one-paragraph rationale.

I'll refine this copy for a first-time video trimmer, maximizing hand-holding while respecting all the constraints.
