1. user (2026-07-04T01:52:27.670Z)

Adversarially VERIFY this Kannada (kn) translation of the KhelSutra upload-trim help against the linter rules. Assume it is WRONG until proven right; check each rule explicitly.

English source:

```
{
  "message": "This clip is {size}, just over the {cap} upload limit, so trim it to your best
rally or two and upload that shorter version.",
  "summary": "No worries, trimming takes about a minute, here's how.",
  "phone": "<b>On a phone:</b> open the clip in your Photos or Gallery app, drag the two handles
at the ends of the video to keep just the rally you want, then save and upload that shorter
clip.",
  "computer": "<b>On a computer:</b> open the clip in the Photos app on Windows or QuickTime
Player on Mac, drag the ends inward to keep only the part you want, then save the shorter clip
and upload it.",
  "advanced": "<b>Advanced:</b> if you'd rather keep the full match, whoever runs the setup can
split it into smaller parts with scripts/chunk_video.py, or upload the whole video to Google
Drive instead."
}
```

Candidate kn:

```
{
  "message": "? ?????? {size} ???, {cap} ???????? ???????? ???????? ?????? ? ???????? ?????
????????? ???????? ?????????????? ?????????, ? ?????? ?????????????? ?????????? ????",
  "summary": "????? ???, ?????????? ?????? ??? ?????? ??? ? ?????? ?????????.",
  "phone": "<b>?????????????:</b> ????? Photos ??? Gallery ?????????????? ?????? ?????????, ??????
???? ?????????????? ?????????????? ?????? ?????? ?????? ?????????????????? ?????????????, ???
????? ??? ?
????? ?????? ?????? ?????????? ????",
  "computer": "<b>?????????????????:</b> Windows ????? Photos ?????????????? ??? Mac ????? QuickTime
Player ????? ?????? ?????????, ?????????? ?????? ?????? ?????? ?????? ?????????????? ?????????????, ???
? ?????? ?????? ?????? ??? ?????? ??????",
  "advanced": "<b>?????????????????:</b> ??? ?????? ?????????? ?????????????? ??????, ??????????????
????????????????? scripts/chunk_video.py ??? ?????? ?????? ?????????? ?????????????, ?????? ??
????????????? ?????? ?????????? ?????????? ??????????",
  "self_check": "All rules satisfied. Placeholders: 'message' contains EXACTLY {size} and {cap}
verbatim with curly braces, placed naturally in Kannada word order (\"? ?????? {size} ???, {cap}
????????? ??????????...\"), and no other braces; summary/phone/computer/advanced contain NO
placeholders or braces. Banned jargon: none of ??????/?????/?????/?????/????? appears
anywhere; no dev jargon in coach-facing lines ? \"whoever runs the setup\" is rendered warmly as
\"????????????? ??????????????\". HTML: only <b>?</b> lead-in labels used in
phone/computer/advanced; no <code>, <kbd>, <samp>, <tt>, <var> or any other tag; summary/message
use no tags. Accuracy: only genuinely-existing beginner trim paths recommended ? iOS/Android
Photos & Gallery on phone, Windows Photos and Mac QuickTime Player on computer; VLC is NOT
recommended; no invented features. advanced mentions scripts/chunk_video.py as plain text (not
<code>) plus the ?????? ?????? (Google Drive) option. Air-gapped: no URLs, links, or \"search
```

online\" ? only inline steps and plain tool names. Brand: \"KhelSutra\" not used here, but product names kept verbatim in Latin ? Photos, Gallery, QuickTime Player, Windows, Mac, scripts/chunk_video.py; Google Drive uses the SPA's established catalog form ????? ??????. Locale conventions matched: ?????, ?????, ????????, ?????, ????????, ????? consistent with existing common.json. Apostrophe-safety: no straight apostrophe (') appears anywhere in the strings, and certainly none immediately before a { ? so no ICU escaping hazard. Each string is a single concise sentence.\"

```
}
```

HARD CONSTRAINTS (a linter enforces these ? violating any FAILS the build):

- Audience: a non-technical BADMINTON COACH who may never have trimmed a video. Warm, plain, actionable. No dev jargon in the coach-facing lines.
- The app runs AIR-GAPPED: NO URLs / links / "search for X online". Only inline instructions and plain tool NAMES.
- Accuracy: only recommend trimming methods that genuinely EXIST and are EASY for a beginner:
 - * Phones: iOS Photos and Android Photos/Gallery both trim video natively ? correct.
 - * Windows: the built-in Photos app trims video ? correct. Mac: QuickTime Player (Edit > Trim) ? correct.
 - * Do NOT recommend VLC for trimming (it has no beginner-friendly trim/export). Do NOT invent features.
- The 'message' string MUST keep EXACTLY the two placeholders {size} and {cap} (verbatim, curly braces), and NO other {braces}. The help strings (summary/phone/computer/advanced) must contain NO {placeholders}.
- HTML: phone/computer/advanced may use ? ONLY (a bold lead-in label). No other tags. NEVER use <code>, <kbd>, <samp>, <tt>, <var>. summary/message use no tags.
- 'advanced' MUST mention scripts/chunk_video.py (plain text, not <code>) and the Google Drive option ? that reference is a required deliverable.
- Keep product/app names verbatim: Photos, Gallery, QuickTime Player, VLC (avoid), Google Drive, scripts/chunk_video.py, Windows, Mac.
- Keep every string to one sentence, concise.

Locale notes: This SPA already uses ?????? (rally), ?????? (video), ?????? ?????? (Google Drive), ????????? (upload). Brand stays Latin "KhelSutra" (never ??????????). Do NOT use ???????/??????/????????/?????/??????????.

Check, and list every failure in 'issues':

1. message contains EXACTLY {size} and {cap} (both present, verbatim, no other braces); help strings have NO braces.
 2. phone/computer/advanced keep ? and use NO other tags; NO <code>/<kbd>/<samp>/<tt>/<var> anywhere.
 3. advanced still names scripts/chunk_video.py AND the Google Drive option.
 4. (kn kn/hi only) NO engine/server/bucket/backend as Latin OR transliteration; brand "KhelSutra" not transliterated.
 5. No straight apostrophe immediately before { or a special char (ICU-safe).
 6. Meaning matches English; tone is warm + non-technical; each string is one concise sentence; recommended trim methods are real/beginner-easy (no VLC-trim claim).
- Set ok=true only if ALL pass. ALWAYS return the FINAL strings (message/summary/phone/computer/advanced): if any issue, return your CORRECTED version; else return the candidate unchanged.

2. assistant (2026-07-04T01:52:30.638Z)

I'll verify this Kannada translation against each linter rule adversarially. Let me first check the actual codebase conventions to ground my analysis.

8. assistant (2026-07-04T01:52:41.509Z)

The locale files aren't in this worktree. Let me search the parent repo directories for the SPA's Kannada catalog to ground the vocabulary/brand checks.

9. user (2026-07-04T01:52:44.267Z)

14. assistant (2026-07-04T01:52:59.823Z)

I now have the existing SPA conventions grounded. The existing catalog confirms: `? ????? {size} ???`, `{cap} ????????? ????`, `scripts/chunk\_video.py`, `????? ??????`, `??????`, `??????`, `????????`, `??????`, `????????`. Now let me adversarially verify the candidate against each rule, focusing on programmatic checks (placeholders, HTML tags, apostrophes, banned jargon) since those are what the linter enforces.

15. user (2026-07-04T01:53:36.875Z)

=== Inspect '?????' cluster (app) for malformed Kannada ===
phone: cluster codepoints: ['0xc86', '0xccd', '0xcaf', '0xcaa', '0xccd'] -> KANNADA LETTER AA
computer: cluster codepoints: ['0xc86', '0xccd', '0xcaf', '0xcaa', '0xccd'] -> KANNADA LETTER AA

```

20. assistant (2026-07-04T01:54:35.236Z)

All programmatic checks pass. But I caught a real orthographic defect in the manual inspection. Let me examine the "app" word cluster closely, since the codepoints reveal a malformed sequence.

The candidate uses `?????` for "app", which is codepoints: U+0C86 (? , letter AA ? an independent vowel) + U+0CCD (virama/halant) + U+0CAF (? , YA) + U+0CAA (? , PA) + U+0CCD (virama).

This is orthographically broken. A virama (halant) can only follow a **consonant** to suppress its inherent vowel. Here it follows U+0C86 which is an **independent vowel letter** (?), not a

consonant. You cannot put a halant on a vowel. The correct Kannada for "app" is `????` ? should be `????`... let me verify what the correct rendering is and cross-check against the existing catalog.

21. user (2026-07-04T01:54:52.800Z)

```
candidate 'app': '????'
['?=0xc86(KANNADA LETTER AA)', '?=0xccd(KANNADA SIGN VIRAMA)', '?=0xcaf(KANNADA LETTER YA)',
'?=0xcaa(KANNADA LETTER PA)', '?=0xccd(KANNADA SIGN VIRAMA)']
AA+PA+virama (aap): '???'
['?=0xc86(KANNADA LETTER AA)', '?=0xcaa(KANNADA LETTER PA)', '?=0xccd(KANNADA SIGN VIRAMA)']
A+virama+YA+AA-sign+PA+virama: '?????'
['?=0xc85(KANNADA LETTER A)', '?=0xccd(KANNADA SIGN VIRAMA)', '?=0xcaf(KANNADA LETTER YA)',
'?=0xcbe(KANNADA VOWEL SIGN AA)', '?=0xcaa(KANNADA LETTER PA)', '?=0xccd(KANNADA SIGN VIRAMA)']
AA+virama+YA+PA+virama (candidate): '?????'
['?=0xc86(KANNADA LETTER AA)', '?=0xccd(KANNADA SIGN VIRAMA)', '?=0xcaf(KANNADA LETTER YA)',
'?=0xcaa(KANNADA LETTER PA)', '?=0xccd(KANNADA SIGN VIRAMA)']
```

Base ? category: Lo = KANNADA LETTER AA

Virama U+0CCD requires a preceding CONSONANT (category Lo consonant), not an independent vowel.

22. assistant (2026-07-04T01:54:57.168Z)

Confirmed: the candidate's "app" spelling `????` (U+0C86 AA + U+0CCD VIRAMA + ...) places a virama on an independent vowel letter ?, which is malformed Kannada ? a virama can only attach to a consonant. This is a genuine orthographic bug in `phone` and `computer`.

Let me check what the existing SPA catalog uses for "app" to match the established convention, and verify the "version" word too.

23. user (2026-07-04T01:55:10.845Z)

```
=== existing 'app' spellings in catalog ===
'???' cps=['0xc85', '0xcaa', '0xccd'] @ .ingest.uploadAria
'???' cps=['0xc86', '0xcaa', '0xccd'] @ .site.privacy.use.note
'????' cps=['0xc86', '0xccd', '0xcaf', '0xcaa', '0xccd'] @ .ffmpeg.missingBody

=== existing 'version' (?????) spellings ===
@ .site.sharper.improve.body: ... ?????????????? ??????????????????
@ .site.privacy.authoritative: ... ?????????? ?????? ?????? ?????????????????, ???

=== does catalog use ????? (broken) or ???/????? anywhere? grep raw ===
'????': count=1
'???': count=4
'?????': count=0
'?????????': count=0
'?????????': count=0
```

24. assistant (2026-07-04T01:55:21.487Z)

Important finding. The existing catalog actually contains BOTH forms:

- `???` (well-formed, AA+PA+virama) appears 4 times ? the dominant, correct form.
- `????` (the malformed halant-on-vowel form) appears once, at `ffmpeg.missingBody`.

So there IS one precedent for the broken form in the catalog, but the well-formed `???` is 4x more common and is the orthographically correct spelling. The candidate uses the malformed `????` in both `phone` and `computer`.

Let me weigh this carefully. The malformed cluster (virama on independent vowel ?) is technically invalid Kannada orthography ? it renders as ? with a broken/dotted-circle-adjacent halant on many rendering stacks. However, the linter as specified enforces a specific set of rules (placeholders, HTML tags, banned jargon, chunk_video.py/Drive, apostrophes, meaning/tone/methods). Orthographic well-formedness of a loanword is NOT one of the six enumerated linter rules. Let me re-verify the six rules and the remaining semantic ones, then

decide whether to correct the app spelling anyway (it's a clear quality defect and the fix is trivial and matches the catalog's dominant form).

Let me also double-check the `advanced` "version" concern and verify no VLC mention and method accuracy, plus confirm meaning fidelity of `message` (English says "just over", candidate says "???????? ??????" = "only slightly more" ? correct).

25. user (2026-07-04T01:55:36.225Z)

26. assistant (2026-07-04T01:55:44.581Z)

All six enumerated linter rules pass. The candidate is clean on: placeholders, HTML tags, chunk_video.py + Google Drive, banned jargon/brand, apostrophes, and meaning/tone/methods (no VLC, real beginner-easy methods, air-gapped, one concise sentence each).

The only defect I found is a Kannada orthography issue: "app" is spelled `????` (independent vowel ? + virama ? malformed; virama can't sit on a vowel) in `phone` and `computer`. The catalog's dominant, correct form is `???` (4 occurrences vs 1 of the broken form). This is not one of the six enumerated linter rules, so it would not FAIL the build per the stated constraints ? but it is a real quality defect with a trivial catalog-consistent fix.

Given the instruction to return a corrected version if any issue exists, I'll fix the malformed "app" spelling to the well-formed `???` in both lines and keep everything else identical (all other text already matches the established catalog vocabulary and passes every hard rule). Since the six enumerated linter rules all pass, `ok` is true; the orthography fix is a quality improvement I'm surfacing and applying.
