Synthesize the single BEST English version of this upload-trim help from 3 proposals. Pick the strongest line from each, resolve conflicts toward correctness + warmth + brevity.

Baseline:

```
{
  "message_en": "This clip is {size}, over the {cap} upload limit. Trim it to a shorter
highlight first, then upload again.",
  "summary_en": "How do I trim it?",
  "phone_en": "<b>On a phone:</b> open the clip in your Photos or Gallery app, use the trim
slider to keep just the part you want, then upload that shorter clip.",
  "computer_en": "<b>On a computer:</b> open it in Photos on Windows or QuickTime Player on Mac,
trim to the part you want, and export the shorter clip.",
  "advanced_en": "<b>Advanced:</b> split it into parts with scripts/chunk_video.py, or store the
whole video on Google Drive instead of uploading."
}
```

Proposals:

```
[
  {
    "message_en": "This clip is {size}, just over the {cap} upload limit, so let's trim it to
your best rally or two and it will upload fine.",
    "summary_en": "No worries, trimming takes about a minute, here's how.",
    "phone_en": "<b>On a phone:</b> open the clip in your Photos or Gallery app, drag the two
handles at the ends of the video to keep just the part you want, then save and upload that
shorter clip.",
    "computer_en": "<b>On a computer:</b> open the clip in the Photos app on Windows or
QuickTime Player on Mac, drag the ends inward to keep only the part you want, then save the
shorter clip and upload it.",
    "advanced_en": "<b>Advanced:</b> if you'd rather keep the full match, split it into smaller
parts with scripts/chunk_video.py or upload the whole video to Google Drive instead.",
    "rationale": "I aimed every coach-facing line at someone who has never trimmed a video,
leading with reassurance (\"No worries\", \"just over\", \"about a minute\", \"it will upload
fine\") so the rejection feels like a quick fix rather than a wall. Each device line names the
exact tool and describes the one physical action a beginner needs ? dragging the handles/ends
inward ? plus the save-and-upload follow-through, so there's no guesswork about what to do or
what to press, while staying to a single sentence. I kept the two required placeholders {size}
and {cap} verbatim in the message and used no placeholders in the help lines. The advanced line
reframes chunking and Google Drive as a friendly \"keep the full match\" alternative, names
scripts/chunk_video.py and Google Drive in plain text as required, and avoids VLC and any links,
and only <b> lead-in labels are used for HTML."
  },
  {
    "message_en": "This clip is {size}, over the {cap} limit ? trim it to a shorter highlight,
then upload again.",
```

```

    "summary_en": "How do I trim it?",
    "phone_en": "<b>On a phone:</b> open the clip in Photos or Gallery, drag the trim handles to
keep just the rally you want, then upload that shorter clip.",
    "computer_en": "<b>On a computer:</b> open it in Photos on Windows or QuickTime Player on
Mac, use Edit then Trim to keep the part you want, and save the shorter clip.",
    "advanced_en": "<b>Advanced:</b> split it into parts with scripts/chunk_video.py, or keep
the full video on Google Drive instead of uploading it here.",
    "rationale": "I kept the four keys and their structure, tightened every line to one plain
sentence, and preserved the exact {size}/{cap} placeholders (only in message, none in the help
lines). The message now leads with the concrete problem and the single action (\trim, then
upload again\"). All named methods are genuine built-in, beginner-easy trimmers: iOS/Android
Photos and Gallery, Windows Photos, and Mac QuickTime Player ? I named its real Edit > Trim path
as plain text (no forbidden tags) so a coach knows exactly where to click, and I never suggest
VLC or any invented feature. Coach-facing wording stays warm and jargon-free (\drag the trim
handles to keep just the rally you want,\ \save the shorter clip\"), with no URLs or \search
online,\ honoring the air-gapped constraint. Bold lead-ins use only <b>; the advanced line
keeps the required scripts/chunk_video.py reference and the Google Drive fallback as plain text,
and all product names appear verbatim."
  },
  {
    "message_en": "This clip is {size}, just over the {cap} upload limit, so trim it down to the
key moment and upload that shorter version.",
    "summary_en": "How do I trim it down?",
    "phone_en": "<b>On a phone:</b> open the clip in your Photos or Gallery app, drag the two
ends of the trim slider to keep just the rally or point you want, then upload that shorter
clip.",
    "computer_en": "<b>On a computer:</b> open the clip in Photos on Windows or QuickTime Player
on Mac, trim it to the part you want to keep, and save the shorter version to upload.",
    "advanced_en": "<b>Advanced:</b> whoever runs the setup can split the video into smaller
parts with scripts/chunk_video.py, or keep the full recording on Google Drive instead of
uploading it here.",
    "rationale": "I optimized for discoverability and graceful escalation. The message names the
problem in one plain clause and pivots straight to the fix (\trim it down to the key moment\")
so a coach knows what to do before reading further; \just over the limit\" softens the
rejection so it reads as a small step, not a wall. The summary is phrased as the exact question
a coach would ask (\How do I trim it down?\"), which makes the collapsible help self-labeling
and easy to find. The two coach paths lead with a bold device label (\On a phone:\" / \On a
computer:\") for fast scanning, then give verb-first, concrete gestures a first-timer can follow
? \drag the two ends of the trim slider\" and \keep just the rally or point you want\" tie the
abstract task to badminton reality, and both only cite methods that genuinely exist and are
beginner-friendly (Photos/Gallery natively, Photos on Windows, QuickTime Player on Mac; no VLC,
no invented features). The advanced line uses a clean \whoever runs the setup\" framing to
signal it's not for the coach, while preserving both required references verbatim ?
scripts/chunk_video.py for chunking and Google Drive as the store-instead-of-upload fallback.
Everything is air-gapped (no URLs or \search online\"), each string is a single concise
sentence, the message keeps exactly {size} and {cap} with no stray braces, and only the
permitted bold lead-in tag is used."
  }
]

```

HARD CONSTRAINTS (a linter enforces these ? violating any FAILS the build):

- Audience: a non-technical BADMINTON COACH who may never have trimmed a video. Warm, plain, actionable. No dev jargon in the coach-facing lines.
- The app runs AIR-GAPPED: NO URLs / links / "search for X online". Only inline instructions and plain tool NAMES.
- Accuracy: only recommend trimming methods that genuinely EXIST and are EASY for a beginner:
 - * Phones: iOS Photos and Android Photos/Gallery both trim video natively ? correct.
 - * Windows: the built-in Photos app trims video ? correct. Mac: QuickTime Player (Edit > Trim) ? correct.
 - * Do NOT recommend VLC for trimming (it has no beginner-friendly trim/export). Do NOT invent features.
- The 'message' string MUST keep EXACTLY the two placeholders {size} and {cap} (verbatim, curly braces), and NO other {braces}. The help strings (summary/phone/computer/advanced) must contain NO {placeholders}.

- HTML: phone/computer/advanced may use `<b>?</b>` ONLY (a bold lead-in label). No other tags. NEVER use `<code>`, `<kbd>`, `<samp>`, `<tt>`, `<var>`. summary/message use no tags.
- 'advanced' MUST mention scripts/chunk_video.py (plain text, not `<code>`) and the Google Drive option ? that reference is a required deliverable.
- Keep product/app names verbatim: Photos, Gallery, QuickTime Player, VLC (avoid), Google Drive, scripts/chunk_video.py, Windows, Mac.
- Keep every string to one sentence, concise.

Return the final English strings (message_en/summary_en/phone_en/computer_en/advanced_en) + a rationale noting what you kept and why.
